

Online SCP-NPM Lab Simulation | Formal SCP-NPM Test

P.S. Free & New SCP-NPM dumps are available on Google Drive shared by TorrentVCE: https://drive.google.com/open?id=1mPTt2FivbxyaaNFVKfcXvLfSnj_1VEh

These SolarWinds SCP-NPM dumps are real, updated, and error-free. It provides you with the essential SolarWinds SCP-NPM exam knowledge that you need to prepare and pass the SolarWinds SCP-NPM certification test with high scores. You can easily use all these three SolarWinds SCP-NPM Exam Questions format. These formats are compatible with all devices, operating systems, and the latest browsers.

Compared with the other SCP-NPM exam questions providers' three months or five months on their free update service, we give all our customers promise that we will give one year free update on the SCP-NPM study quiz after payment. In this way, we can help our customers to pass their exams with more available opportunities with the updated SCP-NPM Preparation materials. You can feel how considerate our service is as well!

Realistic Online SCP-NPM Lab Simulation - Find Shortcut to Pass SCP-NPM Exam

This is the reason why the experts suggest taking the SCP-NPM practice test with all your concentration and effort. The more you can clear your doubts, the more easily you can pass the SCP-NPM exam. TorrentVCE SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) practice test works amazingly to help you understand the SolarWinds SCP-NPM Exam Pattern and how you can attempt the real SolarWinds Exam Questions. It is just like the final SCP-NPM exam pattern and you can change its settings.

SolarWinds SCP-NPM Certification Exam is a valuable credential for IT professionals who want to showcase their expertise in network management and monitoring. SolarWinds Network Performance Monitor (NPM) Exam certification exam covers a wide range of topics related to network performance monitoring and assesses a candidate's ability to troubleshoot issues related to network performance. The SCP-NPM certification is recognized globally and is ideal for individuals who want to advance their career in network management and increase their earning potential.

SolarWinds SCP-NPM (SolarWinds Network Performance Monitor) exam is a certification that is designed for IT professionals who are looking to validate their skills and knowledge in network performance monitoring. SCP-NPM exam is conducted by SolarWinds, a leading provider of network management and monitoring software. SolarWinds Network Performance Monitor (NPM) Exam certification is widely recognized in the industry and is considered to be an important credential for IT professionals who specialize in network performance monitoring.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25

Your team member cannot see any reports in the Orion Console. What can cause this issue?

- A. The reports are configured with more than one limitation category
- B. The Report Writer is not installed
- C. The SQL server is on a different system than the SolarWinds server
- D. The No Reports limitation is applied to the user account

Answer: D

NEW QUESTION # 26

You can apply Universal Device Pollers to which object types? (Choose all that apply.)

- A. Interfaces
- B. Applications
- C. Nodes
- D. Volumes

Answer: A,C,D

Explanation:

Universal Device Pollers (UnDPs) are custom pollers that allow you to monitor specific aspects of your network devices using SNMP. You can apply UnDPs to any object type that supports SNMP polling, such as interfaces, nodes, and volumes. You cannot apply UnDPs to applications, because they are not SNMP-based objects. Applications are monitored using Application Performance Monitor (APM), which uses different methods, such as WMI, scripts, or agents, to collect data. Reference: Monitor custom statistics based on OIDs with Universal Device Pollers in NPM, Assign Universal Device Pollers to devices monitored in NPM, Add and assign Universal Device Pollers

NEW QUESTION # 27

You need to build an Orion Map to show the relationships and connections between your Cloud servers and on premise infrastructure. You add the nodes but discover that the Orion Platform is not automatically mapping the connection between your cloud server and on premise router. You have verified that layer 2 and layer 3 topologies are being polled on the devices. How do you resolve this issue?

- A. You need to open the topology ports in your firewall between the on premise node and the cloud node
- B. You need to configure a custom connection between the cloud node and the on premise node
- C. You need to turn off layer 2 and layer 3 topology polling for cloud monitoring
- D. You cannot monitor the connection between on premise and off premise devices

Answer: B

Explanation:

Sometimes, the Orion Platform may not be able to automatically map the connection between your cloud server and on premise router, even if layer 2 and layer 3 topologies are being polled on the devices. This may happen if the devices are separated by a firewall, a VPN, or a NAT device that prevents the Orion Platform from discovering the link information. In such cases, you can manually create a custom connection between the cloud node and the on premise node on the Orion Map. You can also edit the properties of the custom connection, such as the name, the status, the bandwidth, and the utilization. By creating a custom connection, you can visualize and monitor the connection between your cloud server and on premise router on the Orion Map 12. References:

Create custom connections on Orion Maps - SolarWinds

NEW QUESTION # 28

You run ten reports on three assorted weekly schedules and send the results to the network operations distribution list. The email

address for the distribution list changed, and you must update the new email address to send the reports. How do you implement this update?

- A. Edit each action on each report schedule, and change the email address
- **B. Use the Action Manager to edit each action on each report schedule, and change the email address**
- C. Make a copy of each report, edit the action to change the email address
- D. Use the Schedule Manager to edit each action on each report schedule, and change the email address

Answer: B

Explanation:

The Action Manager is a feature of the Orion Platform that allows you to create, edit, and delete actions for scheduled reports¹. Actions are the tasks that are performed when a report is generated, such as sending an email, saving a file, or printing a report². You can use the Action Manager to edit the email address for each action on each report schedule, without affecting the report content or schedule³. Reference: 1: Network Performance Monitor Administrator Guide - Use the Action Manager 2: Network Performance Monitor Administrator Guide - Schedule a report 3: SolarWinds Certified Professional Program - Reporting Exam Study Guide - Use the Action Manager

NEW QUESTION # 29

How many agents does NPM require for Quality of Experience, NetPath, and system monitoring on the same Windows server?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

NPM requires only one agent for Quality of Experience, NetPath, and system monitoring on the same Windows server. The agent is a software component that collects data from the server and sends it to the Orion server¹. The agent can perform multiple tasks, such as packet analysis, network path analysis, and system health monitoring, depending on the configuration and the license². You can install the agent on the server either manually or remotely from the Orion Web Console³.
