

AWS-Solutions-Architect-Associate證照指南 - AWS-Solutions-Architect-Associate考試題庫

BONUS!!! 免費下載KaoGuTi AWS-Solutions-Architect-Associate考試題庫的完整版: <https://drive.google.com/open?id=1y-LiOV50gWhSICggGhQHTVN2RDRXsJw->

我們KaoGuTi培訓資料可以測試你在準備考試時的知識，也可以評估在約定的時間內你的表現。為你獲得的成績以及突出的薄弱環節給出指示，從而改善了薄弱環節，KaoGuTi Amazon的AWS-Solutions-Architect-Associate考試培訓資料向你介紹不同的核心邏輯的主題，這樣你不僅學習還瞭解各種技術和科目，我們保證，我們的培訓資料是通過實踐檢驗了的，我們KaoGuTi為你的考試做足了充分的準備，我們的問題是全面的，但價格是合理的。

AWS認證解決方案架構師-副認證對於希望展示自己在AWS基礎設施上設計和部署可擴展和可靠的應用程序的技能的專業人士來說，是一項非常有價值的認證。要獲得此認證，候選人必須至少有一年的AWS服務和功能的實踐經驗，並熟悉至少一種編程語言。通過此認證考試可以展示專業人士在AWS基礎設施上設計和部署可擴展和可靠的應用程序的能力。

為 AWS SAA-C02 考試做準備需要深入了解 AWS 服務及其使用情況，以及在平台上構建解決方案的實踐經驗。候選人還應該對 AWS 最佳實踐和設計模式有很好的理解，並熟悉各種 AWS 工具和服務。

AWS-Solutions-Architect-Associate考試題庫，AWS-Solutions-Architect-Associate題庫資訊

AWS-Solutions-Architect-Associate認證考試是現今很受歡迎的考試。還沒有取得這個考試的認證資的你，肯定也想參加這個考試了吧。確實，這是一個困難的考試，但是這也並不是說不能取得高分輕鬆通過考試。那麼，還不知道通過考試的捷徑的你，想知道技巧嗎？我現在告訴你，那就是KaoGuTi的AWS-Solutions-Architect-Associate考古題。

最新的 AWS Certified Solutions Architect AWS-Solutions-Architect-Associate 免費考試真題 (Q591-Q596):

問題 #591

A company wants to run its experimental workloads in the AWS Cloud. The company has a budget for cloud spending. The company's CFO is concerned about cloud spending accountability for each department. The CFO wants to receive notification when the spending threshold reaches 60% of the budget.

Which solution will meet these requirements?

- A. Use AWS Cost Explorer forecasts to determine resource owners. Use AWS Cost Anomaly Detection to create alert threshold notifications when spending exceeds 60% of the budget.
- B. Use AWS Cost Explorer forecasts to determine resource owners. Create usage budgets in AWS Budgets. Add an alert threshold to receive notification when spending exceeds 60% of the budget.
- **C. Use cost allocation tags on AWS resources to label owners. Create usage budgets in AWS Budgets. Add an alert threshold to receive notification when spending exceeds 60% of the budget.**
- D. Use cost allocation tags on AWS resources to label owners. Use AWS Support API on AWS Trusted Advisor to create alert threshold notifications when spending exceeds 60% of the budget

答案: C

解題說明:

This solution meets the requirements because it allows the company to track and manage its cloud spending by using cost allocation tags to assign costs to different departments, creating usage budgets to set spending limits, and adding alert thresholds to receive notifications when the spending reaches a certain percentage of the budget. This way, the company can monitor its experimental workloads and avoid overspending on the cloud.

問題 #592

A company recently expanded globally and wants to make its application accessible to users in those geographic locations. The application is deployed on Amazon EC2 instances behind an Application Load Balancer in an Auto Scaling group. The company needs the ability to shift traffic from resources in one region to another.

What should a solutions architect recommend?

- A. Configure an Amazon Route 53 latency routing policy.
- B. Configure an Amazon Route 53 geolocation routing policy.
- C. Configure an Amazon Route 53 multivalue answer routing policy.
- **D. Configure an Amazon Route 53 geoproximity routing policy.**

答案: D

解題說明:

Explanation

Geoproximity routing policy - Use when you want to route traffic based on the location of your resources and, optionally, "shift traffic from resources in one location to resources in another". Using "Bias" you can expand or shrink size of the geographic region and shift traffic from one geographic region to another. To optionally change the size of the geographic region from which Route 53 routes traffic to a resource, specify the applicable value for the bias: To expand the size of the geographic region from which Route 53 routes traffic to a resource, specify a positive integer from 1 to 99 for the bias. Route 53 shrinks the size of adjacent regions. To shrink the size of the geographic region from which Route 53 routes traffic to a resource, specify a negative bias of -1 to -99. Route 53 expands the size of adjacent regions.

問題 #593

A media company asked a Solutions Architect to design a highly available storage solution to serve as a centralized document store for their Amazon EC2 instances. The storage solution needs to be POSIX-compliant scale dynamically and be able to serve up to 100 concurrent EC2 instances.

Which solution meets these requirements?

- A. Create an Amazon EBS volume and allow multiple users to mount that volume to their EC2 instance(s)
- B. Create an Amazon S3 bucket and store all of the documents in this bucket.

- C. Use Amazon Glacier to store all of the documents
- D. Create an Amazon Elastic File System (Amazon EFS) to store and share the documents.

答案： D

問題 #594

A company uses AWS Organizations to run workloads within multiple AWS accounts. A tagging policy adds department tags to AWS resources when the company creates tags.

An accounting team needs to determine spending on Amazon EC2 consumption. The accounting team must determine which departments are responsible for the costs regardless of AWS account. The accounting team has access to AWS Cost Explorer for all AWS accounts within the organization and needs to access all reports from Cost Explorer.

Which solution meets these requirements in the MOST operationally efficient way?

- A. From the Organizations management account billing console, activate a user-defined cost allocation tag named department. Create one cost report in Cost Explorer grouping by tag name, and filter by EC2.
- B. From the Organizations member account billing console, activate a user-defined cost allocation tag named department. Create one cost report in Cost Explorer grouping by the tag name, and filter by EC2.
- C. From the Organizations management account billing console, activate an AWS-defined cost allocation tag named department. Create one cost report in Cost Explorer grouping by tag name, and filter by EC2.
- D. From the Organizations member account billing console, activate an AWS-defined cost allocation tag named department. Create one cost report in Cost Explorer grouping by tag name and filter by EC2.

答案： C

解題說明：

This solution meets the following requirements:

It is operationally efficient, as it only requires one activation of the cost allocation tag and one creation of the cost report from the management account, which has access to all the member accounts' data and billing preferences.

It is consistent, as it uses the AWS-defined cost allocation tag named department, which is automatically applied to resources when the company creates tags using the tagging policy enforced by AWS Organizations.

This ensures that the tag name and value are the same across all the resources and accounts, and avoids any discrepancies or errors that might arise from user-defined tags.

It is informative, as it creates one cost report in Cost Explorer grouping by the tag name, and filters by EC2.

This allows the accounting team to see the breakdown of EC2 consumption and costs by department, regardless of the AWS account. The team can also use other features of Cost Explorer, such as charts, filters, and forecasts, to analyze and optimize the spending.

問題 #595

A company is planning to build a new web application on AWS. The company expects predictable traffic most of the year and very high traffic on occasion. The web application needs to be highly available and fault tolerant with minimal latency.

What should a solutions architect recommend to meet these requirements?

- A. Use Amazon EC2 instances in a cluster placement group and include the cluster placement group within a new Auto Scaling group.
- B. Use an Amazon Route 53 routing policy to distribute requests to two AWS Regions, each with one Amazon EC2 instance.
- C. Use Amazon EC2 instances in an Auto Scaling group with an Application Load Balancer across multiple Availability Zones.
- D. Use Amazon EC2 instances in a cluster placement group with an Application Load Balancer across multiple Availability Zones.

答案： C

問題 #596
