Fire-Inspector-II Trustworthy Exam Content, Exam Fire-Inspector-II Dumps

The 67 - Fire Inspector II Exam (Fire-Inspector-II) certification exam is one of the top-rated career advancement certification exams. The 67 - Fire Inspector II Exam (Fire-Inspector-II) certification exam can play a significant role in career success. With the

67 - Fire Inspector II Exam (Fire-Inspector-II) certification you can gain several benefits such as validation of skills, career advancement, competitive advantage, continuing education, and global recognition of your skills and knowledge. The 67 - Fire Inspector II Exam (Fire-Inspector-II) certification is a valuable credential that assists you to enhance your existing skills and experience.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

Pressure tests for organic coating process piping shall be conducted for a minimum of:

- A. 2 hours
- **B. 1 hour**
- C. 45 minutes
- D. 30 minutes

Answer: B

Explanation:

Pressure tests for organic coating process piping are required to ensure system integrity and prevent leaks, which could lead to fire or explosion hazards. The minimum required duration for these pressure tests is 1 hour.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 1504.6.3 (Pressure Testing for Organic Coating Process Piping) IFC 1504.6.3 mandates that all process piping associated with organic coating operations must undergo a pressure test for at least 1 hour. This ensures that the pipes can handle operational pressures without failure.
2. NFPA 33 - Standard for Spray Application Using Flammable or Combustible Materials (2021 Edition) NFPA 33, Section 14.2.6 confirms that process piping must be pressure-tested for no less than 1 hour to verify its safety and reliability.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 30 minutes is insufficient for proper pressure testing.

Option B (Incorrect): 45 minutes is still below the 1-hour minimum requirement.

Option C (Correct): 1 hour is the correct minimum test duration as required by IFC 1504.6.3 and NFPA 33.

Option D (Incorrect): 2 hours is longer than required, but the minimum requirement is 1 hour.

Thus, the correct and verified answer is: C. 1 hour.

NEW QUESTION # 16

Given: A health club contains a 1,000-sq. ft. exercise room.

Based on the square footage, what is the calculated occupant load allowed for this exercise room?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The occupant load of a space is determined using the 2021 International Building Code (IBC), Table 1004.5 - Maximum Floor Area Per Occupant.

IBC Table 1004.5 - Occupant Load Factor for Exercise Rooms:

The occupant load factor for an exercise room is 1 person per 20 square feet.

Given that the exercise room is 1,000 sq. ft.:

$1,000 \text{ sq. ft.} \div 20 \text{ sq. ft. per person} = 50 \text{ occupants}$

Why Other Options Are Incorrect?

A: 10 - Would require a 100 sq. ft. per person load factor, which is not applicable for exercise rooms.

B: 20 - Incorrect calculation; using the correct load factor, the actual number is 50.

C: 30 - Also incorrect based on the proper load factor.

NEW QUESTION # 17

Smoking is not permitted within ____ ft. of a transfer point for LP-gas while filling operations are in progress.

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Smoking Restrictions Near LP-Gas Transfer Points

According to the International Fire Code (IFC) 2021, Section 3807.2, smoking is not permitted within 25 feet of an LP-gas transfer point while filling operations are in progress.

This prevents ignition hazards, as LP-gas is highly flammable and can ignite from cigarettes, matches, or lighters.

2. Why 25 Feet is the Correct Answer

LP-gas vapors are heavier than air and can travel significant distances before igniting.

The 25-foot clearance requirement is set to prevent accidental ignition due to an undetected vapor leak.

3. Verification of Other Options

Option A (10 feet) - Incorrect, as this is the requirement for smaller propane cylinder storage areas, not transfer points.

Option B (15 feet) - Incorrect, as IFC mandates a 25-foot minimum clearance.

Option D (50 feet) - Incorrect, as the IFC requirement is specifically 25 feet, not 50.

Reference Sources:

International Fire Code (IFC) 2021 - Section 3807.2 (Smoking Prohibitions Near LP-Gas Transfer Points) NFPA 58: Liquefied Petroleum Gas Code (Safe Handling and Transfer Requirements) ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: C. 25 feet. #

NEW QUESTION # 18

Given: A code official permits a sprinkler system to substitute for a required second exit from a small basement.

How long must records related to this decision be maintained by the code official?

- A. Three years
- **B. For as long as the building and the condition exist**
- C. Until the building is sold
- D. Five years

Answer: B

Explanation:

Retention of Fire Code-Related Records

According to the International Fire Code (IFC) 2021, Section 104.6, records related to code enforcement decisions, including modifications or substitutions (such as a sprinkler system replacing a second exit), must be retained for as long as the building and the condition exist.

This ensures that future inspections, property owners, and authorities can verify past decisions and compliance history.

2. Why the Records Must Be Retained Permanently

Modifications that impact life safety (such as exit requirements) must remain on record for the lifetime of the building to ensure ongoing compliance and safety.

If the condition (sprinkler substitution for an exit) still exists, any future inspector or building official must be able to verify the original approval and rationale.

3. Verification of Other Options

Option A (Five years) - Incorrect, as fire code modifications must remain on record permanently if they affect egress or fire protection systems.

Option B (Three years) - Incorrect, as this timeframe applies to temporary inspection reports, not major code modifications.

Option C (Until the building is sold) - Incorrect, as ownership changes do not affect the need for record retention on fire safety decisions.

Reference Sources:

International Fire Code (IFC) 2021 - Section 104.6 (Fire Code Record Retention Requirements) NFPA 1: Fire Code (Retention of Code-Related Decisions) ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: D. For as long as the building and the condition exist. #

NEW QUESTION # 19

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. Their batteries must be checked every six months.
- B. They must automatically sound a fire alarm throughout the hotel.
- **C. They must be interconnected so that one alarm will activate all alarms within the guest rooms.**
- D. They must initiate an automatic fire suppression or sprinkler system.

Answer: C

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system.

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

NEW QUESTION # 20

.....

The opportunity is for those who have patience to wait for. If you got the Fire-Inspector-II certification before your IT career starts, it will be a good preparation for you to find a satisfactory job. It is not easy to Pass Fire-Inspector-II Exam, but with the help of our Fire-Inspector-II study materials provided by our Actual4test, there are so many candidates have pass the exam. Do you want to be one of them? Let our products to help you.

Fire-Inspector-II Trustworthy Exam Content: https://www.actual4test.com/Fire-Inspector-II_examcollection.html

But as long as we believe Actual4test Fire-Inspector-II Trustworthy Exam Content, this will not be a problem, No one is concerned about how to pass exam and if Fire-Inspector-II real test are difficult, International Code Council Fire-Inspector-II Exam Course Unluckily if you fail the exam we will refund all the cost you paid us based on your unqualified score, Our veteran professional generalize the most important points of questions easily tested in the Fire-Inspector-II practice exam into our practice questions.

Add a Hyperlink, Working with Contrast, Color, and Detail, But as long as we believe Actual4test, this will not be a problem, No one is concerned about how to pass exam and if Fire-Inspector-II real test are difficult.
