Training Fire-Inspector-II Tools - PDF Fire-Inspector-II Download

Our Fire-Inspector-II exam guide can stand the test of market as well as customers of various needs with passing rate up to 98 to 100 percent, which is a strong proof that attest to their efficacy. Our Fire-Inspector-II practice materials can provide the evidence of your working proficiency, and the high-efficiency of them are provided by our company can effectively advance your pace of making progress and speed up your pace of reviving it. So our Fire-Inspector-II Practice Engine is your ideal choice.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25

Where requirements for fire safety are not specifically provided for by the International Fire Code, which of the following shall have the responsibility to determine the applicable requirements?

- A. Board of appeals.
- B. Fire code official.

- C. City manager.
- D. Legal counsel.

Answer: B

Explanation:

According to the International Fire Code (IFC) 2021, when specific fire safety requirements are not explicitly provided for in the code, the responsibility to determine the applicable requirements falls upon the Fire Code Official.

Reference from the IFC (2021):

IFC Section 104.1 - General Authority and Responsibilities:

This section explicitly grants the Fire Code Official the authority to interpret the code and determine the necessary safety measures in cases where the code does not provide specific guidance.

It states: "The fire code official is hereby authorized to enforce the provisions of this code and shall have the authority to render interpretations of the code and to adopt policies and procedures in order to clarify the application of its provisions." IFC Section 104.9 - Alternative Materials and Methods:

This section further supports the authority of the Fire Code Official by allowing them to approve alternative fire safety measures when strict compliance with the code is not feasible.

Why Other Options Are Incorrect?

A: City Manager:

The city manager is responsible for administrative and operational management but does not have the authority to interpret or enforce fire code requirements.

B: Legal Counsel:

Legal counsel provides legal advice but does not have jurisdiction over fire safety code enforcement.

C: Board of Appeals:

The board of appeals reviews disputes and interpretations made by the Fire Code Official, but they do not have primary responsibility for determining applicable fire safety requirements.

Final Conclusion:

The Fire Code Official is the designated authority responsible for interpreting and applying fire safety requirements in situations where the International Fire Code (IFC) does not explicitly provide specific provisions.

NEW QUESTION # 26

Newly upholstered furniture may be required to resist ignition by cigarettes in common areas in which of the following nonsprinklered occupancies?

- A. Group A-1
- **B. Group I-2**
- C. Libraries in Group E
- D. Office spaces

Answer: B

Explanation:

In nonsprinklered occupancies, newly upholstered furniture in common areas must resist ignition by cigarettes primarily in Group I-2 occupancies (such as hospitals, nursing homes, and care facilities). This requirement reduces the risk of fire ignition in environments where occupants may have limited mobility and are unable to evacuate quickly.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 805.2 (Ignition Resistance of Upholstered Furniture and Mattresses) IFC 805.2 specifies that nonsprinklered Group I-2 occupancies must have upholstered furniture that resists ignition by cigarettes because these settings involve vulnerable populations who may need assistance in an emergency.

2. NFPA 101 - Life Safety Code (2021 Edition) - Section 10.3.2 (Fire-Retardant Upholstered Furniture) NFPA 101, Section 10.3.2 aligns with the IFC in requiring that furniture in health care facilities (Group I-2) must meet fire resistance standards to prevent ignition from cigarettes and other sources.

Detailed Explanation of Answer Choices:

Option A (Correct): Group I-2 (hospitals, nursing homes, and assisted living facilities) is required to have cigarette-ignition-resistant upholstered furniture in nonsprinklered common areas.

Option B (Incorrect): Group A-1 (theaters and performing arts venues) does not have this requirement, as seating arrangements are different and typically involve fire-resistant materials.

Option C (Incorrect): Office spaces (Business Occupancies, Group B) do not require ignition-resistant furniture under fire code regulations.

Option D (Incorrect): Libraries in Group E (Educational Occupancies) are not required to have this furniture unless otherwise

specified by local codes.

Thus, the correct and verified answer is: A. Group I-2

NEW QUESTION # 27

Panic hardware is required on exit doors serving an occupant load of ___ or more in a Group ___ Occupancy

- A. 100; F
- B. 10; A
- C. 50; A
- D. 50; M

Answer: C

Explanation:

The requirement for panic hardware on exit doors is specified in 2021 IFC Section 1010.2.9 - Panic and Fire Exit Hardware.

IFC Section 1010.2.9.1 - Where Panic Hardware is Required:

Panic hardware is required for Group A (Assembly) occupancies when the occupant load is 50 or more.

It is also required in certain Group E (Educational) and Group R-1 (Hotels and Dormitories) occupancies under specific conditions.

Why Other Options Are Incorrect?

A: 10; A - The threshold for panic hardware in Group A occupancies is 50, not 10.

C: 50; M - Group M (Mercantile) does not require panic hardware unless specifically required by another section of the code.

D: 100; F - Panic hardware is not required in Group F (Factory) occupancies at 100 occupants; the threshold applies primarily to Group A.

NEW QUESTION # 28

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. They must be interconnected so that one alarm will activate all alarms within the guest rooms.
- B. They must automatically sound a fire alarm throughout the hotel.
- C. They must initiate an automatic fire suppression or sprinkler system.
- D. Their batteries must be checked every six months.

Answer: A

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system.

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

NEW QUESTION # 29

One or more approved fire extinguishers must be located within ___ ft. of hot work locations.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

Fire Extinguisher Requirements for Hot Work Locations

According to the International Fire Code (IFC) 2021, Section 3504.2.6, one or more approved fire extinguishers must be located within 30 feet of hot work locations.

Hot work includes welding, cutting, grinding, brazing, or any operation that generates heat, sparks, or flames.

2. Why 30 Feet is the Correct Answer

Hot work presents a high fire risk, and quick access to fire extinguishers is crucial for immediate response.

The 30-foot requirement ensures that extinguishers are readily accessible without obstructing the work area.

3. Verification of Other Options

Option A (20 feet) - Incorrect, as the IFC mandates a 30-foot minimum distance.

Option C (40 feet) - Incorrect, as this exceeds the maximum distance allowed under the fire code.

Option D (50 feet) - Incorrect, as fire extinguishers must be closer to provide effective fire suppression.

Reference Sources:

International Fire Code (IFC) 2021 - Section 3504.2.6 (Fire Extinguishers for Hot Work) NFPA 51B: Standard for Fire

Prevention During Welding, Cutting, and Other Hot Work ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: B. 30 feet. #

NEW QUESTION # 30

.....

You know, your time is very precious in this fast-paced society. If you only rely on one person's strength, it is difficult for you to gain an advantage. Our Fire-Inspector-II learning questions will be your most satisfied assistant. On one hand, our Fire-Inspector-II exam braindumps contain the most important keypoints about the subject which are collected by our professional experts who have been devoting in this career for years. On the other hand, we always keep updating our Fire-Inspector-II Study Guide to the latest.
