NEW QUESTION # 15

What is a part of LLM context optimization?

- A. Adjusting the model's output format and style
- B. Reducing the model's size to improve efficiency
- C. Enhancing the computational speed of the model
- D. Providing the model with domain-specific knowledge needed to solve a problem

Answer: D

NEW QUESTION # 16

Which technique is used to supply domain-specific knowledge to an LLM?

- A. Retrieval-Augmented Generation
- B. Fine-tuning the model on general data
- C. Domain-adaptation training
- D. Prompt template expansion

Answer: A

Explanation:

Retrieval-Augmented Generation (RAG) is a technique that enhances Large Language Models (LLMs) by integrating external domain-specific knowledge, enabling more accurate and contextually relevant outputs.

1. Understanding Retrieval-Augmented Generation (RAG):

* Definition: RAG combines the generative capabilities of LLMs with retrieval mechanisms that access external knowledge bases or documents. This integration allows the model to incorporate up-to-date and domain-specific information into its responses.

* Mechanism: When presented with a query, the RAG system retrieves pertinent information from external sources and uses this data to inform and generate a more accurate and contextually appropriate response.

2. Application in Supplying Domain-Specific Knowledge:

* Domain Adaptation: By leveraging RAG, LLMs can access specialized information without the need for extensive retraining or fine-tuning. This approach is particularly beneficial for domains with rapidly evolving information or where incorporating proprietary data is essential.

* Efficiency: RAG enables models to provide informed responses by referencing external data, reducing the necessity for large-scale domain-specific training datasets and thereby conserving computational resources.

3. Advantages of Using RAG:

* Up-to-Date Information: Since RAG systems can query current data sources, they are capable of providing the most recent information available, which is crucial in dynamic fields.

* Enhanced Accuracy: Incorporating external knowledge allows the model to produce more precise and contextually relevant outputs, especially in specialized domains.
