Pass Guaranteed Quiz 2025 Esri EAEP2201 – High Pass-Rate Certification Test Answers

People always tend to neglect the great power of accumulation, thus the EAEP2201 study materials can not only benefit one's learning process but also help people develop a good habit of preventing delays. We have full confidence to ensure that you will have an enjoyable study experience with our EAEP2201 Study Materials, which are designed to arouse your interest and help you pass the exam more easily. You will have a better understanding after reading the following advantages.

Esri Enterprise Administration Professional 2201 Sample Questions (Q26-Q31):

NEW QUESTION # 26

An organization configures an ArcGIS Enterprise portal to allow single sign-on using Integrated Windows Authentication (IWA). Configuration includes:

- * All accounts in the Active Directory group gisusers are added to the portal
- * Existing users can sign in without entering credentials However, new employees assigned to the same gisusers group cannot log in, create content, or join groups. What is causing this issue for the new employees?

- A. Their Active Directory accounts have been assigned an incompatible default user type

- B. The Web Adaptor cache must be cleared
- **C. Their Active Directory accounts have not been added to the portal**
- D. Their Active Directory accounts have not had sufficient time to sync to the portal

Answer: C

Explanation:

For IWA authentication, Active Directory users are not automatically added to the ArcGIS Enterprise portal. They must either be:

- * Manually added as members, or
- * Automatically created at first login if auto-creation is enabled.

Since the new users are assigned to the gisusers group but cannot sign in or create content, it's clear that their accounts have not yet been added to the portal.

From ArcGIS Enterprise documentation:

"Integrated Windows Authentication (IWA) allows users to sign in with their Windows credentials. However, users must still be members of the portal. You can manually add users or enable automatic account creation during login."

- * Option B is invalid since default user type settings do not prevent login.
- * Option C is incorrect because synchronization is not time-based-it's account-creation dependent.

NEW QUESTION # 27

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- A. Run usage reports in Portal for ArcGIS to determine the effect on the organization.
- **B. Open ArcGIS Server statistics to create a report for commonly used items.**
- C. Use ArcGIS Monitor to capture desired information over a period of time in a report.

Answer: B

NEW QUESTION # 28

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume.

Which action should the administrator perform?

- **A. Run usage reports in Portal for ArcGIS to determine the effect on the organization.**
- B. Open ArcGIS Server statistics to create a report for commonly used items.
- C. Use ArcGIS Monitor to capture desired information over a period of time in a report.

Answer: A

Explanation:

Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.

ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor captures system performance metrics but is not designed for detailed content usage analysis by users or groups.

Reference Source: ArcGIS Enterprise documentation on usage reports in Portal for ArcGIS.

NEW QUESTION # 29

Users are reporting service timeouts and performance issues. The administrator notices that only the minimum number of instances are running during performance spikes. They want to monitor usage trends before adjusting instance settings.

Which action should the administrator perform?

- A. Change the log level to Debug in ArcGIS Server Manager
- B. Monitor Task Manager on each ArcGIS Server machine
- **C. Create a report of server statistics in ArcGIS Server Manager**
- D. Enable Windows Performance Monitor

Answer: C

Explanation:

To monitor usage patterns, including the number of requests and instances in use, ArcGIS Server provides statistics reports in Server Manager. These reports show peak and average service usage, helping administrators decide how to scale service instance counts.

From ArcGIS Server documentation:

"Use the ArcGIS Server Manager statistics reporting tool to monitor service usage trends over time. This data helps inform adjustments to instance counts."

* Option A gives only raw system metrics, not service-specific insights.

* Option B (Debug logs) causes overhead and isn't appropriate for monitoring trends.

NEW QUESTION # 30

An organization's portal license file provides for 30 Editor user type and 15 GIS Professional user type licenses. After performing a needs assessment, the GIS administrator discovers that the organization requires 10 Viewer, 40 Editor, and 20 GIS Professional user type licenses.

When downloading a new license file, how many of each user type license should the administrator specify?

- A. 30 Viewer, 30 Editor, and 15 GIS Professional user type licenses
- B. 10 Viewer, 10 Editor, and 5 GIS Professional user type licenses
- C. 40 Editor and 20 GIS Professional user type licenses
- **D. 10 Viewer, 40 Editor, and 20 GIS Professional user type licenses**

Answer: D

Explanation:

When downloading a new license file from My Esri to accommodate the organization's user needs, administrators should request the exact quantities identified in the internal needs assessment:

* 10 Viewer

* 40 Editor

* 20 GIS Professional

These quantities will be used to generate the new license file, which reflects the actual number of entitlements needed. Esri licensing is flexible in this regard, and the administrator can request different counts per type within their entitlements.

From the ArcGIS Enterprise Licensing documentation:

"When generating a new license file for your deployment, you can specify the number of each user type and role needed. The license file will reflect these values, and must match the needs of your organization."

* Option A provides insufficient licenses.

* Option B omits the necessary Viewer licenses.

* Option D reflects original entitlements, not the updated requirement.
