NEW QUESTION # 60

Cumulus Financial wants to be able to track the daily transaction volume for each of its customers in real time and send out a notification as soon it detects volume outside a customer's normal range. How should an administrator accommodate this request?

- A. Use Streaming Data Transformations with a Flow
- B. Use Streaming Data Transformations combined with a Data Action
- **C. Use a Streaming Insight paired with a Data Action**
- D. Use a Calculated Insight paired with a Flow

Answer: C

Explanation:

To track the daily transaction volume for each customer in real time and send out a notification as soon as it detects volume outside a customer's normal range, the administrator should use a Streaming Insight paired with a Data Action. A Streaming Insight is a metric that is calculated on streaming data as it is ingested into Data Cloud, allowing near-real-time analysis of customer behavior. A Data Action is an action that is triggered by a Streaming Insight, such as sending an email, updating a record, or calling an API. By using these features, the administrator can monitor and respond to customer transactions in real time.
