On every take, our Scaled Agile SAFe-SPC practice tests save your progress so you can view it to see and strengthen your weak concepts easily.

## Scaled Agile SAFe Practice Consultant SPC (6.0) Sample Questions (Q53-Q58):

### NEW QUESTION # 53

What is NOT a SAFe-recommended practice for DevOps?

- A. Continuously synchronize all Feature and team branches.
- B. Maintain development and test environments to better match production.
- C. Create the ability to automatically build environments.
- D. Deploy to staging every sprint.
- E. Build and maintain a production-equivalent staging environment.
- F. Put everything under version control.
- G. Start automating the actual deployment process.

**Answer: A**

Explanation:

SAFe recommends feature branching only when necessary and encourages frequent integration to avoid the overhead and risk associated with long-lived branches. "Continuously synchronize all Feature and team branches" implies maintaining multiple long-lived branches, which is contrary to SAFe's DevOps and continuous integration best practices.

"Minimize branching and integrate frequently. Long-lived branches and excessive synchronization are discouraged as they increase complexity and risk." (Source: SAFe 6.0 Framework: DevOps; SPC 6.0 Guide "Building Solutions with Agile Product Delivery")

#### NEW QUESTION # 54

An Agile Release Train prepares for PI Planning. They have both Features and Program Epics among the desirable items for this PI. However, Product Management is stuck because some Epics are too big and won't fit in this PI.

- A. Instead of planning just the upcoming PI, plan for a longer period to cover the full duration of the Program Epics.
- **B. Split Epics into Features and use capacity allocation to determine what should go into the PI.**
- C. Pick only those Epics that have clearly defined success criteria and might fit into the PI.
- D. Split Epics into Features and prioritize the Features to determine what should go into the PI.

**Answer: B**

Explanation:

SAFe best practice is to split large Epics into Features that fit within a PI and then use capacity allocation to ensure the right balance between new business Features and Enabler work. Capacity allocation is a specific SAFe tool to guide what goes into the PI, especially when dealing with both Features and Epics.

SAFe 6.0 Website: PI Planning

SPC 6.0 Guide: "Split Epics into Features and use capacity allocation to guide PI Planning."

#### NEW QUESTION # 55

Which option should be the next Agile Release Train (ART) to launch to leverage the full flow of value?

- A. A train in a different value stream
- B. A train in a different portfolio
- **C. A train in the same value stream**
- D. The next train to volunteer

**Answer: C**

Explanation:

To maximize the flow of value, SAFe recommends launching the next ART in the same value stream. This approach builds synergy, enables better integration, and accelerates end-to-end value delivery by reducing cross-ART dependencies and optimizing flow within the value stream.

References:

SAFe 6.0, "Designing the Implementation" (Selecting Next ARTs)

SPC 6.0 Guide, "Designing the Implementation"

#### NEW QUESTION # 56

What is one benefit of creating the implementation plan as a three PI rolling roadmap?

- **A. It enables incremental implementation**
- B. It provides leaders with certainty around the implementation plan
- C. It ensures all capacity is used for implementation activities
- D. It ensures all implementation plan decisions are centralized

**Answer: A**

Explanation:

A three PI rolling roadmap is designed to enable incremental implementation. This approach allows organizations to adjust plans

based on feedback and learning, rather than committing to a fixed long-term plan, and supports a Lean-Agile mindset for large-scale change.

References:

SAFe 6.0, "Implementation Roadmap" (Three PI Rolling Roadmap)

SPC 6.0 Guide, "Leading the Change"

### NEW QUESTION # 57

There are two types of Value Streams in SAFe. One is the Operational Value Stream. What is the other?

- A. Solution Value Stream
- B. Continuous Delivery Value Stream
- C. Network Value Stream
- D. Development Value Stream

**Answer: D**

Explanation:

SAFe defines two types of value streams: Operational Value Streams (which deliver value to the customer) and Development Value Streams (which build the systems and solutions that operational value streams use).

Development Value Streams are essential for building the capabilities that operational value streams leverage.
