Many candidates proved it does 100% pass the exam. With it, you will reach your goal, and can get the best results.

GitHub Advanced Security GHAS Exam Sample Questions (Q74-Q79):

NEW QUESTION # 74

As a contributor, you discovered a vulnerability in a repository. Where should you look for the instructions on how to report the vulnerability?

- A. readme.md
- B. support.md
- C. contributing.md
- D. security.md

Answer: D

Explanation:

The correct place to look is the SECURITY.md file. This file provides contributors and security researchers with instructions on how to responsibly report vulnerabilities. It may include contact methods, preferred communication channels (e.g., security team email), and disclosure guidelines.

This file is considered a GitHub best practice and, when present, activates a "Report a vulnerability" button in the repository's Security tab.

NEW QUESTION # 75

As a repository owner, you do not want to run a GitHub Actions workflow when changes are made to any .txt or markdown files.

How would you adjust the event trigger for a pull request that targets the main branch?

(Each answer presents part of the solution. Choose three.)

* on:

* pull_request:

* branches: [main]

- A. paths:
- B. - 'docs/*.md'
- C. - '/*.*md'
- D. - '/*.*txt'
- E. paths-ignore:

Answer: C,D,E

Explanation:

To exclude .txt and .md files from triggering workflows on pull requests to the main branch:

* on: defines the event (e.g., pull_request)

* pull_request: is the trigger

* paths-ignore: is the key used to ignore file patterns

Example YAML:

yaml

CopyEdit

on:

pull_request:

branches:

- main

paths-ignore:

- '*.md'

- '*.txt'

Using paths: would include only specific files instead - not exclude. paths-ignore: is correct here.

NEW QUESTION # 76

Which Dependabot configuration fields are required? (Each answer presents part of the solution. Choose three.)

- A. allow
- B. directory
- C. milestone
- D. package-ecosystem
- E. schedule.interval

Answer: B,D,E

Explanation:

Comprehensive and Detailed Explanation:

When configuring Dependabot via the dependabot.yml file, the following fields are mandatory for each update configuration:

directory: Specifies the location of the package manifest within the repository. This tells Dependabot where to look for dependency files.

package-ecosystem: Indicates the type of package manager (e.g., npm, pip, maven) used in the specified directory.

schedule.interval: Defines how frequently Dependabot checks for updates (e.g., daily, weekly). This ensures regular scanning for outdated or vulnerable dependencies.

The milestone field is optional and used for associating pull requests with milestones. The allow field is also optional and used to specify which dependencies to update.
GitLab

NEW QUESTION # 77

Which of the following Watch settings could you use to get Dependabot alert notifications? (Each answer presents part of the solution. Choose two.)

- A. The Ignore setting
- B. The Custom setting
- C. The Participating and @mentions setting
- D. The All Activity setting

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation:

To receive Dependabot alert notifications for a repository, you can utilize the following Watch settings:

Custom setting: Allows you to tailor your notifications, enabling you to subscribe specifically to security alerts, including those from Dependabot.

All Activity setting: Subscribes you to all notifications for the repository, encompassing issues, pull requests, and security alerts like those from Dependabot.

The Participating and @mentions setting limits notifications to conversations you're directly involved in or mentioned, which may not include security alerts. The Ignore setting unsubscribes you from all notifications, including critical security alerts.

NEW QUESTION # 78

What kind of repository permissions do you need to request a Common Vulnerabilities and Exposures (CVE) identification number for a security advisory?

- A. Maintain
- B. Admin
- C. Triage
- D. Write

Answer: B

Explanation:

Requesting a CVE ID for a security advisory in a GitHub repository requires Admin permissions. This level of access is necessary because it involves managing sensitive security information and coordinating with external entities to assign a CVE, which is a formal process that can impact the public perception and security posture of the project.

NEW QUESTION # 79

.....

In order to cater to the different requirements of people from different countries in the international market, we have prepared three kinds of versions of our GitHub-Advanced-Security preparation questions in this website, namely, PDF version, online engine and software version, and you can choose any one of them as you like.
