VMware 2V0-11.24 Exam Syllabus Topics:

Topic	Details
Topic 1	• User Interface: This section of the exam measures the skills of Lightning Developers and covers UI customization using Visualforce pages, Lightning Components, and Flow. Candidates must understand how to securely display and modify Salesforce data through controllers or extensions while ensuring protection against security vulnerabilities. The section also evaluates knowledge of Lightning Web Components, event handling, and best practices for creating custom UI components. Additionally, it assesses the ability to integrate Apex with various UI elements such as Lightning Components, Flow, and Next Best Actions.

Topic 2	• Process Automation and Logic: This section of the exam measures the skills of Apex Developers and focuses on the capabilities of declarative process automation tools and Apex programming. It includes defining variables, constants, and methods while understanding the use of modifiers and interfaces. Candidates must be able to apply control flow statements, write SOQL, SOSL, and DML statements, and follow best practices for Apex classes and triggers. The section also assesses knowledge of governor limits, transaction management, execution order, and recursion. Additionally, candidates should be able to implement error handling using standard and custom exceptions.
Topic 3	• Developer Fundamentals: This section of the exam measures the skills of Salesforce Developers and covers key concepts such as multi-tenant architecture, MVC framework, and the Lightning Component Framework. It evaluates the ability to differentiate between declarative and programmatic customization approaches while considering governor limits, formula fields, and roll-up summaries. Candidates must demonstrate proficiency in defining data models, including objects, fields, relationships, and external IDs. Additionally, they should understand the best practices for importing and exporting data within development environments.
Topic 4	• Testing, Debugging, and Deployment: This section of the exam measures the skills of Salesforce DevOps Engineers and focuses on writing and executing tests for triggers, controllers, and automation processes. Candidates should understand how to utilize Salesforce Developer tools like Salesforce DX, CLI, and Developer Console for troubleshooting. The section also covers debugging strategies for monitoring flows, processes, and asynchronous jobs. Furthermore, it evaluates knowledge of different deployment environments, requirements, and best practices for releasing code and configurations efficiently.

Reliable 2V0-11.24 Exam Sims | Test 2V0-11.24 Prep

In order to facilitate the wide variety of users' needs the 2V0-11.24 study guide have developed three models with the highest application rate in the present - PDF, software and online. Online mode of another name is App of 2V0-11.24 study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the 2V0-11.24 simulating materials of this learning model, such as computer, phone, laptop and so on.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q28-Q33):

NEW QUESTION # 28

Which type of certificates are primarily used in VMware Cloud Foundation for component communication?

- A. Temporary
- B. Trial Certificates
- C. Self-Signed
- **D. CA-Signed**

Answer: D

Explanation:

Self-signed certificates can be used but are not recommended for production.

Temporary certificates are not suitable for production environments.

Trial certificates are not intended for production use.

CA-signed certificates are recommended for secure, trusted communications.

NEW QUESTION # 29

What type of workload can be managed using the vSphere IaaS control plane?

- **A. Virtual Machines**
- B. Physical Servers
- C. Legacy Applications

- D. Static Websites

Answer: A

Explanation:

Legacy applications are typically not part of this management.

Physical servers are not managed through the IaaS control plane.

It allows for the management of virtual machines and Kubernetes workloads.

Static websites are not a focus for IaaS management.

NEW QUESTION # 30

What type of resource can be allocated within a vSphere Namespace?

- A. Network Adapters
- **B. Virtual Machines**
- C. Physical Servers
- D. Storage Volumes

Answer: B

Explanation:

Namespaces allow the allocation of resources to virtual machines.

Physical servers cannot be managed within a namespace.

Network adapters are configured but not directly allocated.

Storage volumes can be allocated but are secondary to VMs.

NEW QUESTION # 31

What is the primary function of the VMware Cloud Builder appliance?

- A. Provide Backups
- B. Monitor Performance
- C. Manage Users
- **D. Automate Deployments**

Answer: D

Explanation:

It automates the deployment of VMware Cloud Foundation components.

It does not manage user accounts directly.

It is not used for performance monitoring.

It does not provide backup solutions.

NEW QUESTION # 32

How can health checks in SDDC Manager assist in troubleshooting?

- **A. Identify Configuration Issues**
- B. Monitor Performance
- C. Validate Resources
- D. Review User Feedback

Answer: A

Explanation:

Resource validation is important but separate from health checks.

Health checks can identify misconfigurations and operational problems.

Monitoring performance is secondary to identifying configuration issues.

User feedback is often unreliable for technical troubleshooting.
