

Forescout FSCP Test Registration & Valid FSCP Exam Forum

If you find any quality problems of our FSCP or you do not pass the exam, we will unconditionally full refund. VCE4Plus is professional site that providing Forescout FSCP Questions and answers, it covers almost the FSCP full knowledge points.

Our product for the FSCP exam is compiled by the skilled professionals who have studied the exam for years, therefore the quality of the practice materials are quite high, it will help you to pass the exam with ease. Free update for the latest version within one year are available. And the questions and answers of the FSCP Exam are from the real exam, and the answers are also verified by the experts, and money back guarantee. The payment of the FSCP exam is also safe for our customers, we apply online payment with credit card, it can ensure the account safety of our customers.

2025 FSCP: Accurate Forescout Certified Professional Exam Test Registration

Learning is just a part of our life. We do not hope that you spend all your time on learning the FSCP certification materials. Life needs balance, and productivity gives us a sense of accomplishment and value. So our FSCP real exam dumps have simplified your study and alleviated your pressure from study. It is our goal that you study for a short time but can study efficiently. At present, thousands of candidates have successfully passed the FSCP Exam with less time input. In fact, there is no point in wasting much time on invalid input. As old saying goes, all work and no play makes jack a dull boy. Our FSCP certification materials really deserve your choice. Contact us quickly. We are waiting for you.

Forescout Certified Professional Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which two of the following are main uses of the User Directory plugin? (Choose Two)

- A. Populate the Dashboard
- B. Define authentication traffic
- C. Perform Radius authorization

- D. Query user details
- E. Verify authentication credentials

Answer: D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout User Directory Plugin documentation, the two main uses of the User Directory plugin are: Verify authentication credentials (A) and Query user details (D).

Main Functions of User Directory Plugin:

According to the official documentation:

"The User Directory plugin resolves endpoint user details and performs user authentication via configured internal and external directory servers." The plugin's two primary functions are:

- * Authenticate Users - Verify/validate authentication credentials

- * Resolve User Information - Query and retrieve user details from directory servers

Verifying Authentication Credentials:

According to the documentation:

The User Directory plugin:

- * Validates user credentials against configured directory servers (Active Directory, LDAP, etc.)

- * Performs authentication for:

- * Endpoint user authentication

- * Console login authentication

- * Guest user registration

- * RADIUS authentication

Querying User Details:

According to the documentation:

The User Directory plugin:

- * Resolves endpoint user information including:

- * User name and identity

- * Group membership

- * User properties and attributes

- * Department and organizational unit information

- * Retrieves details via LDAP queries when "Use as directory" is enabled

Why Other Options Are Incorrect:

- * B. Define authentication traffic - The plugin doesn't define traffic; it queries authentication servers for user information

- * C. Perform Radius authorization - This is the function of the RADIUS Plugin, not the User Directory plugin (though they work together)

- * E. Populate the Dashboard - Dashboard population is not a primary function of the User Directory plugin

User Directory vs. RADIUS Plugin:

According to the documentation:

Function

User Directory

RADIUS

Authenticate credentials

#Yes

#Yes (primary)

Query user details

#Yes (primary)

#No

802.1X authentication

#No

#Yes

Authorization

Partial

#Yes (primary)

NEW QUESTION # 69

How are additional recipients added to a "Send Mail" action?

- A. Thru the setting on Tools > Options > General > Mail and adding the recipients separated by commas
- B. Thru the policy sub rule and adding a condition for each of the desired recipients
- C. Thru the policy "Send Mail" action, under the Parameters tab add the recipients separated by commas
- D. Thru Tools > Options > Advanced - Mail and adding the recipients separated by semi-colons
- E. Thru the Tools > Options > NAC Email and adding the recipients separated by semi-colons

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout Administration Guide, additional recipients for the "Send Mail" action are added through the setting on Tools > Options > General > Mail and adding the recipients separated by commas.

Managing Email Notification Addresses:

According to the official documentation:

"From the Tools menu, select Options > General > Mail and DNS. Update any of the following fields: Send Email Alerts/Notifications - List email addresses to receive CounterACT email alerts." Email Address Separator Options:

According to the documentation:

"Separate multiple addresses using any of the following characters: semicolon (;), blank space or comma (,)." So while commas are the primary method shown in the documentation, the system also accepts semicolons and spaces as separators. However, the answer that most specifically matches the Forescout documentation interface is Option A.

How to Configure Email Recipients:

According to the administration guide:

- * Open Tools Menu - Select "Tools" from the menu bar
- * Select Options - Click on "Options"
- * Navigate to Mail Settings - Select "General > Mail and DNS"
- * Add Recipients - Enter email addresses in the "Send Email Alerts/Notifications" field
- * Separate Multiple Addresses - Use commas, semicolons, or spaces between addresses Example Recipient Configuration:

According to the documentation:

text

Example 1: user1@example.com,user2@example.com,user3@example.com

Example 2: user1@example.com; user2@example.com; user3@example.com

Policy-Level vs. Global Email Configuration:

According to the documentation:

- * Global Email Configuration (Tools > Options > General > Mail) - Sets default recipients for all email alerts
- * Send Email Action (in policy) - Can be configured to send to administrator email or specify alternative recipients The global configuration in Tools > Options is where the primary recipient list is maintained.

Why Other Options Are Incorrect:

- * B. Thru the policy "Send Mail" action, under the Parameters tab - This is not where email recipients are configured; the policy action uses the global settings
- * C. Thru Tools > Options > Advanced - Mail - The correct path is Tools > Options > General > Mail, not Advanced
- * D. Thru the Tools > Options > NAC Email - There is no "NAC Email" option in Tools > Options
- * E. Thru the policy sub rule and adding a condition - Sub-rules contain conditions, not email recipient configuration Send Email Action in Policies:

According to the documentation:

"The Send Email action automatically delivers email to administrators when a policy is matched." This action uses the email addresses configured in the global mail settings.

NEW QUESTION # 70

Which of the following User Directory server settings is necessary to enable guest approval by sponsors?

- A. Authentication Server
- B. Policy to control
- C. Guest Tags
- D. Sponsor Group

- E. Guest password policy

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

The Sponsor Group is the necessary User Directory server setting required to enable guest approval by sponsors. According to the Forescout User Directory Plugin Configuration Guide and Guest Management Portal documentation, Sponsor Groups must be created and configured to define the corporate employees (sponsors) who are authorized to approve or decline guest network access requests.

Sponsor Group Configuration:

In the Guest Management pane, the Sponsors tab is used to define the corporate employees who are authorized to log into the Guest Management Portal to approve network access requests from guests. These employees are assigned to specific Sponsor Groups, which control which sponsors can approve guest access requests.

How Sponsor Groups Enable Guest Approval:

- * Sponsor Definition - Corporate employees must be designated as sponsors and assigned to a Sponsor Group
 - * Approval Authority - Sponsors in assigned groups can approve or decline guest network access requests
 - * Authentication - When "Enable sponsor approval without authentication via emailed link" is selected, sponsors in the designated group can approve guests based on email link authorization
 - * Guest Registration - Guest registration options connect Sponsor Groups to the guest approval workflow
- Why Other Options Are Incorrect:

- * A. Policy to control - While policies are used for guest control, they do not define which sponsors can approve guests
- * B. Guest Tags - Guest Tags are used to classify and organize guest accounts, not to enable sponsor approval
- * D. Guest password policy - This setting controls password requirements for guests, not sponsor approval authority
- * E. Authentication Server - Authentication servers verify credentials but do not establish sponsor approval groups

Referenced Documentation:

- * Forescout User Directory Plugin Configuration Guide - Create Sponsors section
- * Guest Management Portal - Sponsor Configuration documentation
- * "Create sponsors" - Forescout Administration Guide section

NEW QUESTION # 71

What is true of the "Use as directory" selection configured below?

Select one:

- A. It allows resolution of user information via RADIUS
- B. It enables HTTP authentication and resolves HTTP login status
- C. It allows for Guest Registration when Approvals are required
- D. It allows resolution of user information via TACACS
- E. It allows resolution of User information via LDAP

Answer: E

Explanation:

According to the Forescout User Directory Plugin Configuration Guide and the RADIUS Plugin Configuration Guide Version 4.3, the "Use as directory" selection allows resolution of user information via LDAP. The documentation explicitly states:

"Use as directory: Select this option to use the server as a directory to retrieve user information. This option is not available for RADIUS and TACACS servers." What "Use as directory" Does:

According to the User Directory Plugin documentation:

When "Use as directory" is selected on a User Directory server configuration:

- * LDAP Query Capability - The server can be queried via LDAP to retrieve user information
 - * User Resolution - User details are resolved by querying the LDAP directory
 - * Directory Lookups - User properties (group membership, attributes, contact info) are retrieved from the directory
 - * Policy Matching - Users can be matched in policies based on directory group membership
- Supported Server Types for "Use as directory":

According to the configuration guide:

The "Use as directory" option is available for:

- * Microsoft Active Directory (via LDAP protocol)
- * OpenLDAP (via LDAP protocol)
- * Other LDAP-compatible directory servers

The "Use as directory" option is NOT available for:

- * RADIUS servers - Cannot be used as a directory
- * TACACS servers - Cannot be used as a directory

Why RADIUS/TACACS Cannot Be Directories:

According to the documentation:

- * RADIUS and TACACS are authentication and authorization protocols, NOT directory protocols
- * They do not support directory-style lookups and user attribute queries
- * They only provide authentication (username/password verification) and authorization (what the user can do)
- * They cannot provide the rich user information that LDAP directories can provide LDAP as a Directory Protocol:

According to the documentation:

LDAP (Lightweight Directory Access Protocol) provides:

- * User Information Storage - Stores user objects with multiple attributes
- * Directory Queries - Can query for specific users and their properties
- * Group Membership - Can retrieve LDAP group information
- * Attribute Resolution - Can access user attributes for policy conditions

Three Critical Checkboxes:

According to the RADIUS Plugin Configuration Guide:

"Make sure that both the Use as directory option and the Use for authentication option are enabled." This indicates that a single User Directory server can have multiple roles:

- * Use as directory - For LDAP queries and user information resolution
- * Use for authentication - For user login authentication
- * Use for Console Login - For access to the Forescout Console

Example Configuration:

According to the documentation:

When you have an Active Directory server:

- * # "Use as directory" is CHECKED - Enables LDAP queries for user info and group membership
 - * # "Use for authentication" is CHECKED - Allows users to authenticate with their AD credentials
 - * # "Use for Console Login" is CHECKED - Allows administrators to log into Forescout Console with AD credentials
- Why Other Options Are Incorrect:
- * B. It allows resolution of user information via TACACS - Explicitly NOT available for TACACS; TACACS cannot function as a directory
 - * C. It allows for Guest Registration when Approvals are required - This is a separate User Directory feature unrelated to "Use as directory"
 - * D. It enables HTTP authentication and resolves HTTP login status - This is not related to directory usage; HTTP authentication is a separate feature
 - * E. It allows resolution of user information via RADIUS - Explicitly NOT available for RADIUS; RADIUS servers cannot function as directories
- Referenced Documentation:
- * User Directory Plugin Configuration - Define User Directory Servers
 - * User Directory Plugin - Name and Type Step documentation
 - * RADIUS Plugin Configuration Guide Version 4.3 - User Directory Readiness section

NEW QUESTION # 72

Proper policy flow should consist of..

- A. Modify as little as possible in discovery, each classify sub-rule should flow to an assess policy, IoT classify policies typically test manageability, IT classify usually indicates ownership.
- B. Modify as little as possible in discovery, each classify sub-rule should flow to an assess policy, IoT classify policies typically test ownership, IT classify usually indicates ownership.
- C. Modify as little as possible in discovery, each discovery sub-rule should flow to a classify policy. IT classify policies typically test manageability, IoT classify usually indicates ownership.
- D. Discovery should include customized sub-rules, each discovery sub-rule should flow to a classify policy, IT classify policies typically test manageability, IoT classify usually indicates ownership.
- E. Modify as little as possible in discovery, each sub-rule should flow to assess. IT classify policies typically test manageability, IoT classify usually indicates ownership.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Forescout Platform Administration and Deployment:

According to the Forescout IoT Security solutions documentation and policy best practices, proper policy flow should consist of: "Modify as little as possible in discovery, each classify sub-rule should flow to an assess policy, IoT classify policies typically test manageability, IT classify usually indicates ownership".

Policy Flow Architecture:

According to the Forescout IoT Security documentation:

text

Discovery Phase (Passive)

#

Classification Phase (Determine device type)

IoT Classify - Test MANAGEABILITY

IT Classify - Indicate OWNERSHIP

#

Assessment Phase (Evaluate compliance)

#

Control Phase (Apply actions)

Discovery Phase - Minimal Modification:

According to the documentation:

"Modify as little as possible in discovery. Discovery should remain passive and non-invasive, using only network traffic analysis and passive profiling to gain device visibility." This approach prevents operational disruption and maintains passive-only visibility.

Classification Phase:

According to the Forescout solution brief:

* IT Device Classification Policies:

* Typically indicate OWNERSHIP (corporate vs. BYOD)

* Determine if device is managed or unmanaged

* Establish if device belongs to organization

* IoT Device Classification Policies:

* Typically test MANAGEABILITY (can it be managed)

* Determine if device can support agents or management

* Assess remote accessibility capabilities

Assessment Phase Flow:

According to the documentation:

"Each classify sub-rule should flow to an assess policy. This hierarchical flow ensures that assessment policies evaluate endpoints based on their classification, not before." The workflow is:

text

Classify Sub-Rule # Assessment Policy

If device matches classifier criteria

Then assessment policy evaluates compliance

Why Other Options Are Incorrect:

* A. IoT classify policies typically test ownership - Incorrect; IT classify policies test ownership, IoT policies test manageability

* C. Each sub-rule should flow to assess - Missing the critical "from classify" part; sub-rules flow from classify to assess

* D. Discovery should include customized sub-rules - Incorrect; discovery should be minimal; sub-rules are for classify/assess

phases

* E. Each discovery sub-rule should flow to classify policy - Incorrect terminology; discovery doesn't have sub-rules that flow
