Our Associate-Cloud-Engineer exam reference materials allow free trial downloads. You can get the information you want to know through the trial version. After downloading our Associate-Cloud-Engineer study materials trial version, you can also easily select the version you like, as well as your favorite Associate-Cloud-Engineer exam prep, based on which you can make targeted choices. Our Associate-Cloud-Engineer Study Materials want every user to understand the product and be able to really get what they need. Our Associate-Cloud-Engineer study materials are so easy to understand that no matter who you are, you can find what you want here.

Below is a salary of Associate Cloud Engineer Certified Professional

- Europe: 64758.65 Euro
- England: 54610.82 Pound
- United States: 71,399 USD
- India: 5092569.37 INR

Google Associate-Cloud-Engineer Certification is an essential certification for professionals who want to demonstrate their skills and knowledge in cloud computing. It validates your ability to manage and deploy GCP solutions and is recognized globally by employers. With cloud computing becoming increasingly important in today's business world, earning this certification can help you advance your career and increase your earning potential.

How to Obtain Excellent Results Here on Google Associate-Cloud-Engineer Exam

How much time do you think it takes to pass an exam? Our Associate-Cloud-Engineer learning materials can assure you that you only need to spend twenty to thirty hours to pass the exam. Many people think this is incredible. But our Associate-Cloud-Engineer exam questions really did. We chose the most professional team, so our Associate-Cloud-Engineer study braindumps have a comprehensive content and scientific design. And if you don't believe that, you can free download the demos to have a check before payment.

Google Associate Cloud Engineer Exam Sample Questions (Q84-Q89):

NEW QUESTION # 84

You need to set up permissions for a set of Compute Engine instances to enable them to write data into a particular Cloud Storage bucket. You want to follow Google-recommended practices. What should you do?

- A. Create a service account and add it to the IAM role 'storage.objectAdmin' for that bucket.

- **B. Create a service account with an access scope. Use the access scope 'https://www.googleapis.com/auth/cloud-platform'.**
- C. Create a service account and add it to the IAM role 'storage.objectCreator' for that bucket.
- D. Create a service account with an access scope. Use the access scope 'https://www.googleapis.com/auth/devstorage.write_only'.

Answer: B

NEW QUESTION # 85

You are using Google Kubernetes Engine with autoscaling enabled to host a new application. You want to expose this new application to the public, using HTTPS on a public IP address. What should you do?

- A. Create a Kubernetes Service of type NodePort to expose the application on port 443 of each node of the Kubernetes cluster. Configure the public DNS name of your application with the IP of every node of the cluster to achieve load-balancing.
- B. Create a HAProxy pod in the cluster to load-balance the traffic to all the pods of the application. Forward the public traffic to HAProxy with an iptable rule. Configure the DNS name of your application using the public IP of the node HAProxy is running on.
- C. Create a Kubernetes Service of type ClusterIP for your application. Configure the public DNS name of your application using the IP of this Service.
- **D. Create a Kubernetes Service of type NodePort for your application, and a Kubernetes Ingress to expose this Service via a Cloud Load Balancer.**

Answer: D

Explanation:

Reference: <https://cloud.google.com/kubernetes-engine/docs/tutorials/http-balancer> Create a Kubernetes Service of type ClusterIP for your application. Configure the public DNS name of your application using the IP of this Service. is not right.

Kubernetes Service of type ClusterIP exposes the Service on a cluster-internal IP. Choosing this value makes the Service only reachable from within the cluster so you can not route external traffic to this IP.

Ref: <https://kubernetes.io/docs/concepts/services-networking/service/>

NEW QUESTION # 86

You are designing an application that lets users upload and share photos. You expect your application to grow really fast and you are targeting a worldwide audience. You want to delete uploaded photos after 30 days. You want to minimize costs while ensuring your application is highly available. Which GCP storage solution should you choose?

- A. Persistent SSD on VM instances.
- B. Cloud Datastore database.
- **C. Multiregional Cloud Storage bucket.**
- D. Cloud Filestore.

Answer: C

Explanation:

Cloud Storage allows world-wide storage and retrieval of any amount of data at any time. We don't need to set up auto-scaling ourselves. Cloud Storage autoscaling is managed by GCP. Cloud Storage is an object store so it is suitable for storing photos.

Cloud Storage allows world-wide storage and retrieval so cater well to our worldwide audience. Cloud storage provides us lifecycle rules that can be configured to automatically delete objects older than 30 days. This also fits our requirements. Finally, Google Cloud Storage offers several storage classes such as Nearline Storage (\$0.01 per GB per Month) Coldline Storage (\$0.007 per GB per Month) and Archive Storage (\$0.004 per GB per month) which are significantly cheaper than any of the options above.

NEW QUESTION # 87

You are performing a monthly security check of your Google Cloud environment and want to know who has access to view data stored in your Google Cloud Project. What should you do?

- A. Review the Identity-Aware Proxy settings for each resource.
- **B. Review the IAM permissions for any role that allows for data access.**
- C. Create a Data Loss Prevention job.
- D. Enable Audit Logs for all APIs that are related to data storage.

Answer: B

Explanation:

Explanation/Reference: <https://cloud.google.com/compute/docs/access>

NEW QUESTION # 88

You are a Google Cloud organization administrator. You need to configure organization policies and log sinks on Google Cloud projects that cannot be removed by project users to comply with your company's security policies. The security policies are different for each company department. Each company department has a user with the Project Owner role assigned to their projects. What should you do?

- A. Organize projects under folders for each department. Configure organization policies on the organization and log sinks on the folders.
- B. Use a standard naming convention for projects that includes the department name. Configure both organization policies and log sinks on the projects.
- **C. Use a standard naming convention for projects that includes the department name. Configure organization policies on the organization and log sinks on the projects.**
- D. Organize projects under folders for each department. Configure both organization policies and log sinks on the folders.

Answer: C

NEW QUESTION # 89

.....

A second format is a Associate-Cloud-Engineer web-based practice exam that can take for self-assessment. However, it differs from desktop-based Associate-Cloud-Engineer practice exam software as it can be taken via any browser, including Chrome, Firefox, Safari, and Opera. This Google Associate-Cloud-Engineer web-based practice exam does not require any other plugins. You can take this Associate-Cloud-Engineer self-assessment test on Windows, iOS, Linux, Mac, and Android. It also includes all of the functionalities of desktop Associate-Cloud-Engineer software and will assist you in passing the Associate-Cloud-Engineer certification test.
