It is known to us that the 21st century is an information era of rapid development. Now the people who have the opportunity to gain the newest information, who can top win profit maximization. In a similar way, people who want to pass FCSS\_SDW\_AR-7.4 exam also need to have a good command of the newest information about the coming exam. However, it is not easy for a lot of people to learn more about the information about the study materials. Luckily, the FCSS\_SDW\_AR-7.4 exam dumps from our company will help all people to have a good command of the newest information. Because our company have employed a lot of experts and professors to renew and update the FCSS\_SDW\_AR-7.4 test training guide for all customer in order to provide all customers with the newest information. If you also choose the FCSS\_SDW\_AR-7.4 study questions from our company, we can promise that you will have the chance to enjoy the newest information provided by our company.

We all need some professional certificates such as FCSS\_SDW\_AR-7.4 to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our FCSS\_SDW\_AR-7.4 practice materials for you with our heartfelt sincerity. With passing rate more than 98 percent from exam candidates who chose our FCSS\_SDW\_AR-7.4 study guide, we have full confidence that your FCSS\_SDW\_AR-7.4 exam will be a piece of cake by them.

## Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q30-Q35):

### NEW QUESTION # 30

What are three key routing principles of SD-WAN? (Choose three.)

- A. SD-WAN members are skipped if they do not have a valid route to the destination.
- B. Policy routes have precedence over SD-WAN rules.
- C. SD-WAN rules are skipped if the best route to the destination is not an SD-WAN member.
- D. SD-WAN rules are skipped if the best route to the destination is a static route
- E. Directly connected routes have precedence over SD-WAN rules.

**Answer: A,B,C**

Explanation:

Fortinet outlines key SD-WAN routing principles:

"Policy routes are always evaluated before SD-WAN rules, meaning if a policy route matches, SD-WAN steering is bypassed. If the best route for a destination is not via an SD-WAN member, SD-WAN rules do not apply, and members are ignored if they lack a valid route. This hierarchy ensures traffic always follows the most deterministic and valid path according to configuration." Understanding these principles is critical for correct SD-WAN and routing integration.

#### NEW QUESTION # 31

Which three characteristics apply to provisioning templates available on FortiManager? (Choose three.)

- A. A CLI template can be of type CLI script or Perl script.
- B. CLI templates are applied in order, from top to bottom.
- C. A template group can include a system template and an SD-WAN template.
- D. Each template group can contain up to three IPsec tunnel templates.
- E. A CLI template group can contain CLI templates of both types.

**Answer: B,C,E**

Explanation:

Template groups can include both system and SD-WAN templates to streamline configuration deployment.

A CLI template group can include both CLI Script and CLI Snippet types.

CLI templates are applied in top-to-bottom order, which affects configuration precedence.

#### NEW QUESTION # 32

You want FortiGate to use SD-WAN rules to steer local-out traffic.

Which two constraints should you consider? (Choose two.)

- A. By default, local-out traffic does not use SD-WAN.
- B. You must configure each local-out feature individually to use SD-WAN.
- C. You can steer local-out traffic only with SD-WAN rules that use the manual strategy.
- D. By default, FortiGate uses SD-WAN rules only for local-out traffic that corresponds to ping and traceroute.

**Answer: A,B**

Explanation:

By default, local-out traffic does not use SD-WAN → FortiGate normally sends local-out traffic (e.g., DNS, NTP, FortiGuard updates) directly through its interfaces without applying SD-WAN rules.

You must configure each local-out feature individually to use SD-WAN → To steer local-out traffic via SD-WAN, you must explicitly configure the desired local-out features (e.g., DNS, FortiGuard, CAPWAP) to use SD-WAN rules.

#### NEW QUESTION # 33

The exhibit shows output of the command `diagnose sys adwan service4` collected on a FortiGate device.

The administrator wants to know through which interface FortiGate will steer traffic from local users on subnet 10.0.1.0/255.255.255.192 and with a destination of the social media application Facebook.

Based on the exhibits, which two statements are correct? (Choose two.)

- A. When FortiGate cannot recognize the application of the flow, it steers the traffic through the preferred member of rule 3, HQ\_T1.
- B. There is no service defined for the Facebook application, so FortiGate applies service rule 3 and directs the traffic to headquarters.
- C. FortiGate steers traffic for social media applications according to the service rule 2 and steers traffic through port2.
- D. When FortiGate cannot recognize the application of the flow, it load balances the traffic through the tunnels HQ\_T1, HQ\_T2, HQ\_T3.

**Answer: C,D**

## NEW QUESTION # 34

You used the HUB IPsec\_Recommended and the BRANCH IPsec\_Recommended templates to define the overlay topology. Then, you used the SD-WAN template to define the SD-WAN members, rules, and performance SLAs.

You applied the changes to the devices and want to use the FortiManager monitors menu to get a graphical view that shows the status of each SD-WAN member.

Which statement best explains how to obtain this graphical view?

- A. Use the SD-WAN monitor template view to get a map view of the branches, hub, and tunnel status, including the SLA pass or missed status.
- B. Use the SD-WAN monitor asset view to get a donut view and a table view that shows the status of each device and the SLA status of each SD-WAN member.
- **C. Use the SD-WAN monitor table view to get a donut view and a table view that shows the status of each SD-WAN member, including the SLA pass or missed status.**
- D. Use the VPN monitor map view to get a map view of the branches, hub, and tunnel status, including the SLA pass or missed status.

**Answer: C**

Explanation:

The SD-WAN monitor's table view in FortiManager provides a donut visualization plus a detailed table that shows each SD-WAN member's status and SLA pass/miss, giving the per-member health view you're after.
