First-grade Free 1Z0-1055-25 Exam, Ensure to pass the 1Z0-1055-25 Exam

VCEPrep resolves your issue and provides you with an updated and actual Oracle 1Z0-1055-25 Practice Test. You can successfully prepare for the 1Z0-1055-25 exam in a short time with the help of our latest exam questions. Our 1Z0-1055-25 Questions are original and help you concentrate on the key domains of the Oracle Fusion Cloud Financials: Payables and Expenses 2025 Implementation Professional certification exam. Therefore, you can save time and ace the test by practicing with these updated 1Z0-1055-25 exam questions.

Oracle Fusion Cloud Financials: Payables and Expenses 2025

Implementation Professional Sample Questions (Q33-Q38):

NEW QUESTION # 33

You have enabled Payment Approval for your Payment Process Requests (PPR). At what stage of the PPR is the payment approval process automatically triggered?

- A. Review Proposed Payments
- B. Review Installments
- C. Create Payment Files
- D. Build Payments

Answer: A

Explanation:

Comprehensive and Detailed In-Depth

In Oracle Financials Cloud, the Payment Process Request (PPR) undergoes several stages, each with specific functions and potential user interventions. When Payment Approval is enabled, the system incorporates an approval workflow to ensure that payments are reviewed and authorized before disbursement.

Stages of Payment Process Request:

Installment Selection:

Description: The system selects invoice installments based on predefined criteria such as due dates, payment methods, and supplier information.

User Action: Optional review if the "Review Installments" option is selected.

Document Validation:

Description: Validates the selected installments for completeness and correctness, ensuring all necessary information is present.

User Action: Required if there are validation errors or missing information.

Build Payments:

Description: Groups validated installments into payments based on attributes like payment date, disbursement bank account, and payment method.

User Action: None, this is an automated process.

Review Proposed Payments:

Description: Allows users to review and, if necessary, modify the proposed payments before finalizing them.

User Action: Required if the "Review Proposed Payments" option is selected.

Payment Approval:

Description: If enabled, this stage involves routing the proposed payments to designated approvers for authorization before disbursement.

User Action: Approvers must review and approve or reject the payments.

Create Payment Files:

Description: Generates the necessary payment files for disbursement, such as electronic funds transfer (EFT) files or check print files.

User Action: None, unless issues arise during file creation.

Trigger Point for Payment Approval:

The Payment Approval process is automatically triggered at the Review Proposed Payments stage. At this point, the system pauses to allow approvers to review the proposed payments and make decisions regarding their authorization. This control mechanism ensures that all payments are vetted before funds are disbursed, aligning with organizational policies and financial controls.

According to Oracle's documentation:

"If enabled, the payment process stops at the Review Proposed Payments stage. Approvers can then optionally remove payments directly from a payment process request and approve it." docs.oracle.com Analysis of Options:

A . Review Proposed Payments: Correct. This is the stage where the payment approval process is triggered, allowing approvers to review and authorize payments.

B . Create Payment Files: Incorrect. This stage occurs after payment approval and involves generating the actual payment files for disbursement.

C . Review Installments: Incorrect. This is an earlier stage where selected installments are reviewed before payments are built, but it does not involve the payment approval workflow.

D . Build Payments: Incorrect. This stage involves grouping validated installments into payments and occurs before the Review Proposed Payments stage.

Conclusion:

Enabling Payment Approval in Oracle Financials Cloud introduces a critical control point at the Review Proposed Payments stage of the Payment Process Request. This setup ensures that all proposed payments undergo managerial review and authorization before the creation of payment files and the actual disbursement of funds. Implementing this approval process helps maintain robust financial oversight and compliance within the organization's payment workflows.

NEW QUESTION # 34

A Payables user creates a manual invoice, and a Withholding Tax Classification Code defaults on the invoice line when the invoice is saved. Where does this Withholding Tax Classification Code default from?

- A. From the Site Assignments of the Supplier Site
- B. From the Ship-to Location selected on the invoice
- C. From the Party Tax Profile of the Third Party Site

Answer: A

Explanation:

A). From the Site Assignments of the Supplier Site (Correct Answer)

The Withholding Tax Classification Code can be assigned at the supplier site level in Oracle Financials Cloud.

When a supplier site has a predefined withholding tax classification, this automatically defaults onto the invoice line when an invoice is created for that supplier site.

This setup ensures that consistent withholding tax is applied to transactions related to that supplier.

According to Oracle documentation:

"For supplier sites that use withholding tax, the withholding tax classification that you define at the supplier site assignment level is used to populate the default tax classification on the invoice." (Oracle Financials Cloud Payables Guide) B). From the Party Tax Profile of the Third Party Site (Incorrect Answer) The Party Tax Profile contains tax-related settings for a supplier or third-party entity, including tax registration details.

However, it does not directly default the Withholding Tax Classification Code onto invoice lines.

Instead, the Party Tax Profile provides high-level tax configurations that may influence tax calculations but does not assign the default withholding tax classification.

C). From the Ship-to Location selected on the invoice (Incorrect Answer) The Ship-to Location on an invoice is used for logistics and sales tax calculations based on where goods are delivered.

It does not impact withholding tax, which is typically linked to the supplier or supplier site.

Therefore, the Withholding Tax Classification Code does not default from the Ship-to Location.

Final Conclusion:

The correct source of the default Withholding Tax Classification Code on an invoice line is the Supplier Site Assignment.

This ensures that withholding tax is consistently applied to transactions involving that supplier, reducing errors in tax calculations.

Reference:

Oracle Financials Cloud Documentation - Withholding Tax Classifications in Payables (Oracle Documentation Link) Explanation: Comprehensive and Detailed In-Depth

In Oracle Financials Cloud, when a Payables user creates a manual invoice, the Withholding Tax Classification Code can default onto the invoice line from various sources depending on the system configurations. The correct source for defaulting this code is from the Site Assignments of the Supplier Site.

Explanation of Each Option:

NEW QUESTION # 35

You have assisted your customer with the implementation of Oracle Intelligent document Recognition (IDR). They want to track the accuracy of the invoice line recognition for invoices processed by IDR. You introduce them to the invoice documents recognition rate report to obtain the invoice line recognition details.

In which three formats is this report available?

- A. Invoice Line Details
- B. **Invoice Header supplier summary**
- C. Invoice Header summary
- D. **Invoice Line Summary**
- E. **Invoice Header Details**
- F. Invoice Summary Details

Answer: B,D,E

NEW QUESTION # 36

SIMULATION

MANAGE EXPENSE REPORT TEMPLATE

Task 2:

Create Expense Items, where:

- a. The effective start date is the current date.
- b. There is no tax implication.
- c. Projects are not used.
- d. Receipt and expense fields are the same as the expense report template.
- e. The dinner expense item is associated with the Meal policy created in the previous challenge.

Answer:

Explanation:

See the Explanation for Step by Step Solution

Explanation:

TASK 2: CREATE EXPENSE ITEMS

We need to create expense items with the following requirements:

- ✓ Effective Start Date: Set to current date.
- ✓ No tax implications.
- ✓ Projects are not used.
- ✓ Receipt and expense fields should match those from the expense report template created earlier.
- ✓ Dinner expense item must be linked to the Meal policy created in the previous task.

Step-by-Step Solution: Configuring Expense Items in Oracle Financials Cloud Step 1: Navigate to the Expense Items Setup Log in to Oracle Financials Cloud as an Expense Manager or Financial Administrator.

Navigate to Setup and Maintenance.

In the Search Bar, type "Manage Expense Items".

Click on Manage Expense Items.

Step 2: Create Expense Items

Click Create New Expense Item.

Enter the following details:

Expense Item: Internet

Name: "Internet"

Expense Category: "Meals and Entertainment"

Effective Start Date: Current Date

Tax Classification Code: None (No tax implications)

Projects Used? No (Uncheck "Enable for Projects")

Receipt Required? Follow Template Policy

Expense Fields? Set as Optional

- ✓ Click Save and Close.

Expense Item: Room Rate

Click Create New Expense Item again.

Enter the following details:

Name: "Room Rate"

Expense Category: "Lodging"

Effective Start Date: Current Date

Tax Classification Code: None

Projects Used? No

Receipt Required? Follow Template Policy

Expense Fields? Set as Optional

- ✓ Click Save and Close.

Expense Item: Dinner (Linked to Meal Policy)

Click Create New Expense Item again.

Enter the following details:

Name: "Dinner"

Expense Category: "Meals and Entertainment"

Effective Start Date: Current Date

Tax Classification Code: None

Projects Used? No

Receipt Required? Follow Template Policy

Expense Fields? Set as Optional

Link to the Meal Policy Created Earlier:

Navigate to Expense Policies.

Select the previously created Meal Policy.

Ensure that Dinner Expense Item is associated with this policy.

Set Limit Type: Warning Only (if applicable).

✓ Click Save and Close.

Step 3: Validate and Confirm the Expense Items

Review the created expense items.

Ensure that:

No tax classification codes are applied.

Projects are disabled.

Receipt and expense fields match those in the Expense Report Template.

Dinner Expense Item is correctly linked to the Meal Policy.

✓ Click Submit and Activate.

Step 4: Test the Expense Items

Simulate an Expense Report Submission:

Select Internet, Room Rate, and Dinner as expense types.

Enter sample amounts.

Ensure that:

No tax implications appear.

Projects field is disabled.

Receipt rules match the Expense Report Template.

A warning is displayed if the Dinner Expense exceeds the Meal Policy limit.

Expected Outcome:

✓ Expense items are successfully created.

✓ No tax implications are applied.

✓ Projects are not enabled.

✓ Receipts and expense fields match the template.

✓ Dinner expense item is linked to the Meal Policy and displays a warning if the limit is exceeded.

Conclusion

By following these steps, we have successfully created expense items that comply with all business requirements.

NEW QUESTION # 37

As an Expenses Administrator, you can control which expense values you do not want to automatically populate on the Create Expense Item page. You have therefore created the profile option EXM_DFLT_FROM_PREV_EXPENSE at the user level and set it to N (No).

Which three values will no longer populate from a previous expense item when a user enters a new expense item?

- A. Project and Task Number
- B. Expense Location
- C. Template
- D. Currency

Answer: A,B,C

Explanation:

Comprehensive and Detailed In-Depth

In Oracle Expenses, the profile option EXM_DFLT_FROM_PREV_EXPENSE determines whether certain fields on the Create Expense Item page are automatically populated with values from the previously entered expense item.

By default, when this profile option is set to 'Y' (Yes), the application carries over several fields from the last entered expense item to streamline data entry. These fields include:

Date

Template

Expense Location

Currency (both ledger and reimbursement currency)

Company and Department

Project Number and Task Number

However, when the profile option is set to 'N' (No) at the user level, the system stops carrying over certain fields from the previous

expense item

Fields That Will No Longer Auto-Populate:

Expense Location - Users must manually enter the expense location for each new entry.

Template - Expense templates (if used) will not be pre-filled from the previous expense item

Project and Task Number - Users must reselect the project and task number for each new expense entry.

Fields That Will Still Populate With Defaults:

Currency - Defaults to the ledger currency as configured in Human Capital Management (HCM).

Company and Department - These values will be retrieved from the user's default expense account setup in HCM.

Thus, the correct answer is: A, B, D because the Expense Location, Template, and Project & Task Number will no longer populate from a previous expense item when a user enters a new one.
