Free 1Z0-931-25 Practice & Trustworthy 1Z0-931-25 Exam Torrent
It is similar to the 1Z0-931-25 desktop-based software, with all the elements of the desktop practice exam. This mock exam can be accessed from any browser and does not require installation. The Oracle Autonomous Database Cloud 2025 Professional (1Z0-931-25) questions in the mock test are the same as those in the real exam. And candidates will be able to take the web-based Oracle Autonomous Database Cloud 2025 Professional (1Z0-931-25) practice test immediately through any operating system and browsers.

Oracle 1Z0-931-25 Exam Syllabus Topics:

Topic	Details

Topic 1	- Autonomous Database Tools: This section of the exam measures the skills of Data Analysts and covers the tools available within Autonomous Databases for advanced data processing and analytics. It includes Oracle Machine Learning, APEX, and SQL Developer Web for database development, as well as data transformation, business model creation, data insights, and data analysis, allowing analysts to extract valuable insights from large datasets.
Topic 2	- Autonomous Database Dedicated: This section of the exam measures the skills of IT Architects and explores the workflows and functionality of Autonomous Database Dedicated and Autonomous Database Cloud@Customer. It includes provisioning dedicated resources, setting up OCI policies, monitoring infrastructure, scheduling maintenance tasks such as patching, and managing encryption keys for enhanced security. IT Architects will learn how to integrate dedicated database environments within their cloud strategy.
Topic 3	- Developing on Autonomous Database: This section of the exam measures the skills of Application Developers and focuses on developing and extending applications using Autonomous Database. It covers using generative AI for natural language queries, Autonomous JSON Database, Oracle Text for document search, location-based analysis with Autonomous Spatial, Autonomous Graph for data relationships, and integration with Object Storage, enabling developers to build intelligent, scalable applications.
Topic 4	- Autonomous Database Shared: This section of the exam measures the skills of Cloud Engineers and focuses on creating and managing shared Autonomous Database instances. It includes provisioning, scaling, and starting or stopping instances, as well as database consolidation with Elastic Resource Pools. It also covers user management, cloning, database migration, monitoring, backup and restore processes, and introduces Data Guard for high availability, ensuring cloud engineers can maintain optimal database performance.

Excellent 1Z0-931-25 exam brain dumps offer you high-quality practice questions - PassExamDumps

As is known to us, the 1Z0-931-25 certification has been increasingly important for a lot of modern people in the rapid development world. Why is the 1Z0-931-25 certification so significant for many people? Because having the certification can help people make their dreams come true, including have a better job, gain more wealth, have a higher social position and so on. Many people are difficult in getting the 1Z0-931-25 Certification successfully. If you also have trouble in passing your exam and getting your certification, we think it is time for you to use our 1Z0-931-25 quiz prep.

Oracle Autonomous Database Cloud 2025 Professional Sample Questions (Q63-Q68):

NEW QUESTION # 63
Who, and in which order, provisions dedicated Exadata Infrastructure resources?

- A. The Fleet Administrator provisions the Autonomous Exadata Infrastructure. Then, the Database Administrator provisions the Autonomous Container DB and then the Autonomous DB
- B. The Database Administrator provisions the Autonomous Exadata Infrastructure. Then, the Fleet Administrator provisions the Autonomous Container DB and then the Autonomous DB
- C. The Database Administrator provisions the Autonomous Container DB and the Autonomous DB. Then, the Fleet Administrator provisions the Autonomous Exadata Infrastructure
- D. The Fleet Administrator provisions the Autonomous Exadata Infrastructure and then the Autonomous Container DB and then, the Database Administrator provisions the Autonomous DB

Answer: D

Explanation:
Provisioning dedicated Exadata Infrastructure resources for Autonomous Database follows a strict hierarchical order, reflecting roles and dependencies. The correct sequence is:

The Fleet Administrator provisions the Autonomous Exadata Infrastructure and then the Autonomous Container DB and then, the Database Administrator provisions the Autonomous DB (A):

Fleet Administrator provisions Autonomous Exadata Infrastructure (AEI): The Fleet Admin, responsible for infrastructure management, starts by provisioning the AEI via the OCI console (e.g., "Create Autonomous Exadata Infrastructure"). This sets up the physical Exadata hardware, networking (e.g., VCN, subnets), and initial configuration (e.g., 2 racks, 4 nodes). For example, they might specify a compartment and region (e.g., us-ashburn-1), taking 1-2 hours for provisioning.

Fleet Administrator provisions Autonomous Container DB (ACD): Within the AEI, the Fleet Admin creates the ACD (e.g., "Create Autonomous Container Database"), a lightweight container hosting multiple ADBs. They set parameters like version (e.g., 19c) and maintenance windows (e.g., Sundays 02:00 UTC), ensuring the container is ready. This step might take 15-30 minutes.

Database Administrator provisions Autonomous DB (ADB): Finally, the DBA provisions individual ADBs within the ACD (e.g., "Create Autonomous Database"), choosing workload type (ATP/ADW), OCPUs (e.g., 4), and storage (e.g., 1 TB). For instance, they might create an ATP instance named PRODDB for a transactional app, completing setup in 5-10 minutes.

The incorrect options are:

B: The DBA can't provision the ACD or ADB before the AEI exists, as the infrastructure is foundational. The Fleet Admin must act first.

C: The DBA doesn't provision AEI-that's an infrastructure task beyond their scope. The Fleet Admin handles hardware setup.

D: The DBA can't provision the ACD; that's a Fleet Admin task within the AEI. Roles are distinct: Fleet Admin for infra, DBA for databases.

This order ensures proper infrastructure setup before database creation, aligning with OCI's role-based workflow.

NEW QUESTION # 64

Which Autonomous Database Service is NOT used to connect to an Autonomous Transaction Processing instance?

- A. HIGH
- B. LOW
- C. TPPERFORMANT
- D. TPURGENT
- E. MEDIUM

Answer: C

Explanation:
Full Detailed In-Depth Explanation:
Autonomous Transaction Processing (ATP) supports specific service names for connectivity:
TPURGENT: High-priority service with 200 concurrent statements per OCPU and parallelism.
MEDIUM: Balanced service for moderate workloads.
HIGH: Optimized for reporting/batch jobs with high parallelism.
LOW: Low-priority service for minimal resource use.
TP: General-purpose transactional service.
TPPERFORMANT is not a recognized service name in ATP documentation, making A the correct answer.

NEW QUESTION # 65

Which two infrastructure types support deployment of Oracle Autonomous Database? (Choose two.)

- A. Virtual Machines on Oracle Cloud Infrastructure
- B. Dedicated Exadata Infrastructure
- C. Shared Exadata Infrastructure
- D. Oracle Bare Metal Servers

Answer: B,C

Explanation:
Oracle Autonomous Database is designed to run on specific infrastructure optimized for its managed capabilities:
Correct Answer (B): Dedicated Exadata Infrastructure provides a fully dedicated Exadata system for a single tenant, offering maximum isolation, performance, and customization (e.g., maintenance scheduling).
Correct Answer (D): Shared Exadata Infrastructure allows multiple Autonomous Database instances to share Exadata resources, providing a cost-effective option for smaller workloads while retaining automation benefits.
Incorrect Options:
A: Virtual Machines (VMs) on OCI are not a supported deployment platform for Autonomous Database. It requires Exadata

hardware for its self-managing features, unlike traditional OCI VMs used for manual database setups.

C: Oracle Bare Metal Servers are not used for Autonomous Database; they lack the specialized Exadata architecture needed for its autonomous operations.

These infrastructure types ensure high performance and scalability tailored to Autonomous Database's requirements.

NEW QUESTION # 66

Which can be used to ensure that your Autonomous Database is accessible only from a given set of IPs?

- A. IPSec List
- B. IP Vault
- C. Security List
- D. Access Control List

Answer: D

Explanation:

Restricting access to an Autonomous Database to specific IPs involves network security controls. The correct answer is:

Access Control List (C): In Autonomous Database, an Access Control List (ACL) defines which IP addresses or CIDR blocks (e.g., 192.168.1.0/24) can connect to the database. You configure this via the OCI console under the ADB's "Access Control List" settings, adding rules like "Allow TCP from 10.0.0.0/16 on port 1522." This applies to public endpoints (shared infrastructure) or private endpoints with additional network rules, ensuring only authorized IPs can initiate connections. For example, a company might restrict access to its office VPN range, blocking all other traffic. ACLs work at the database level, complementing VCN security.

The incorrect options are:

Security List (A): Security Lists operate at the VCN subnet level, controlling traffic to all resources in the subnet (e.g., ingress TCP 1522 to an ADB subnet). While useful, they're broader than ADB-specific ACLs, which target the database instance directly, making ACLs the precise answer here.

IP Vault (B): There's no "IP Vault" in OCI. This might confuse OCI Vault (for secrets), but it doesn't manage IP access.

IPSec List (D): IPSec secures traffic via VPNs, not IP allowlisting for database access. It's unrelated to ADB connectivity restrictions.

ACLs provide a database-specific, user-friendly way to enforce IP-based access control.

NEW QUESTION # 67

Which two statements are true when running DBMS_CLOUD.COPY_DATA? (Choose two.)

- A. The source files can reside in Oracle Object Storage, Amazon S3 Object Storage, or Azure Blob Storage.
- B. The target table will be created in Autonomous Database if it does not already exist.
- C. A valid credential must be created prior to running the DBMS_CLOUD.COPY_DATA procedure.
- D. The source file can be in either Oracle Standard Storage or Oracle Archive Storage bucket in the Object Store.
- E. The source file will be automatically removed after the DBMS_CLOUD.COPY_DATA procedure finishes successfully.

Answer: A,C

Explanation:

DBMS_CLOUD.COPY_DATA loads data into Autonomous Database:

Correct Answer (B): "The source files can reside in Oracle Object Storage, Amazon S3 Object Storage, or Azure Blob Storage" is true. The procedure supports these cloud storage services with proper credentials.

Correct Answer (E): "A valid credential must be created prior to running the DBMS_CLOUD.COPY_DATA procedure" is true. Credentials (e.g., via DBMS_CLOUD.CREATE_CREDENTIAL) authenticate access to the source storage.

Incorrect Options:

A: Source files are not automatically removed; deletion requires separate action.

C: The target table must exist; COPY_DATA doesn't create it.

D: Archive Storage isn't supported; only Standard Storage is compatible.

This enables flexible data loading from cloud storage.

NEW QUESTION # 68

......

The client only needs 20-30 hours to learn our 1Z0-931-25 learning questions and then they can attend the exam. Most people may devote their main energy and time to their jobs, learning or other important things and can't spare much time to prepare for the 1Z0-931-25 Exam. But if clients buy our 1Z0-931-25 training materials they can not only do their jobs or learning well but also pass the 1Z0-931-25 exam smoothly and easily because they only need to spare little time to learn and prepare for the exam.
