

Free Associate-Cloud-Engineer Practice Exams & Reliable Associate-Cloud-Engineer Dumps Ebook

What's more, part of that TorrentVCE Associate-Cloud-Engineer dumps now are free: https://drive.google.com/open?id=1-A-I_HE2CTV_L9WtLu2JqDV9fg0lQUn

For a long time, high quality is our Associate-Cloud-Engineer exam questions constantly attract students to participate in the use of important factors, only the guarantee of high quality, to provide students with a better teaching method, and at the same time the Associate-Cloud-Engineer practice quiz brings more outstanding teaching effect. Our high-quality Associate-Cloud-Engineer learning guide help the students know how to choose suitable for their own learning method, our Associate-Cloud-Engineer study materials are a very good option.

Upon passing the Google Associate Cloud Engineer certification exam, you will receive a certificate that demonstrates your proficiency in operating and deploying applications, infrastructure, and services on the Google Cloud Platform. Google Associate Cloud Engineer Exam certification can help boost your career prospects, as it is recognized by employers and demonstrates that you have a strong understanding of cloud computing and the Google Cloud Platform.

Google Associate-Cloud-Engineer (Google Associate Cloud Engineer) Exam is a certification exam offered by Google Cloud Platform that assesses the skills and knowledge of individuals in managing and deploying applications, services, and infrastructure on Google Cloud Platform. Google Associate Cloud Engineer Exam certification is designed for individuals who are new to Google Cloud or for those who have some experience in cloud computing but are looking to validate their skills.

Free Associate-Cloud-Engineer Practice Exams - Realistic Reliable Google Associate Cloud Engineer Exam Dumps Ebook Free PDF

If you also need to take the Associate-Cloud-Engineer exam and want to get the related certification, you can directly select our study materials. We can promise that our Associate-Cloud-Engineer study question has a higher quality than other study materials in the market. If you want to keep making progress and transcending yourself, we believe that you will harvest happiness and growth. So if you buy and use the Associate-Cloud-Engineer test dump from our company, we believe that our study materials will make study more interesting and colorful, and it will be very easy for a lot of people to pass their exam and get the related certification if they choose our Associate-Cloud-Engineer Test Dump and take it into consideration seriously. Now we are willing to introduce the Associate-Cloud-Engineer exam reference guide from our company to you in order to let you have a deep understanding of our study materials. We believe that you will benefit a lot from our Associate-Cloud-Engineer study question.

Google Associate Cloud Engineer Exam Sample Questions (Q257-Q262):

NEW QUESTION # 257

You create a Deployment with 2 replicas in a Google Kubernetes Engine cluster that has a single preemptible node pool. After a few minutes, you use `kubectl` to examine the status of your Pod and observe that one of them is still in Pending status:

```
$ kubectl get pods -l app=myapp
```

NAME	READY	STATUS	RESTART	AGE
myapp-deployment-58ddb995-lp86m	0/1	Pending	0	9m
myapp-deployment-58ddb995-qjpkg	1/1	Running	0	9m

What is the most likely cause?

- A. The pending Pod's resource requests are too large to fit on a single node of the cluster.
- B. The pending Pod was originally scheduled on a node that has been preempted between the creation of the Deployment and your verification of the Pods' status. It is currently being rescheduled on a new node.
- C. The node pool is configured with a service account that does not have permission to pull the container image used by the pending Pod.
- **D. Too many Pods are already running in the cluster, and there are not enough resources left to schedule the pending Pod.**

Answer: D

NEW QUESTION # 258

You deployed a new application inside your Google Kubernetes Engine cluster using the YAML file specified below.

```
apiVersion: apps/v1          apiVersion: v1
kind: Deployment             kind: Service
metadata:                   metadata:
  name: myapp-deployment    name: myapp-service
spec:                      spec:
  selector:                ports:
    matchLabels:            - port: 8000
      app: myapp            targetPort: 80
  replicas: 2              protocol: TCP
  template:                selector:
    metadata:               app: myapp
    labels:
      app: myapp
  spec:
    containers:
      - name: myapp
        image: myapp:1.1
        ports:
          - containerPort: 80
```

You check the status of the deployed pods and notice that one of them is still in PENDING status:

```
kubectl get pods -l app=myapp
```

NAME	READY	STATUS	RESTART	AGE
myapp-deployment-58ddb995-lp86m	0/1	Pending	0	9m
myapp-deployment-58ddb995-qjpkg	1/1	Running	0	9m

You want to find out why the pod is stuck in pending status. What should you do?

- A. View logs of the container in myapp-deployment-58ddb995-lp86m pod and check for warning messages.
- B. Review details of the myapp-deployment Deployment object and check for error messages.
- C. Review details of the myapp-service Service object and check for error messages.
- **D. Review details of myapp-deployment-58ddb995-lp86m Pod and check for warning messages.**

Answer: D

Explanation:

<https://kubernetes.io/docs/tasks/debug-application-cluster/debug-application/#debugging-pods>

NEW QUESTION # 259

You want to configure an SSH connection to a single Compute Engine instance for users in the dev1 group. This instance is the only resource in this particular Google Cloud Platform project that the dev1 users should be able to connect to. What should you do?

- A. Enable block project wide keys for the instance. Generate an SSH key for each user in the dev1 group. Distribute the keys to dev1 users and direct them to use their third-party tools to connect.
- B. Set metadata to enable-oslogin=true for the instance. Set the service account to no service account for that instance. Direct

them to use the Cloud Shell to ssh to that instance.

- C. Set metadata to enable-oslogin=true for the instance. Grant the dev1 group the compute.osLogin role. Direct them to use the Cloud Shell to ssh to that instance.
- D. Enable block project wide keys for the instance. Generate an SSH key and associate the key with that instance. Distribute the key to dev1 users and direct them to use their third-party tools to connect.

Answer: D

NEW QUESTION # 260

You are hosting an application from Compute Engine virtual machines (VMs) in us-central1-a.

You want to adjust your design to support the failure of a single Compute Engine zone, eliminate downtime, and minimize cost. What should you do?

- A. - Create a Managed Instance Group and specify us-central1-a as the zone.
- Configure the Health Check with a short Health Interval.
- B. - Create Compute Engine resources in us-central1-b.
- Balance the load across both us-central1-a and us-central1-b.
- C. - Create an HTTP(S) Load Balancer.
- Create one or more global forwarding rules to direct traffic to your VMs.
- D. - Perform regular backups of your application.
- Create a Cloud Monitoring Alert and be notified if your application becomes unavailable.
- Restore from backups when notified.

Answer: B

Explanation:

Create Compute Engine resources in us "central1 "b. " Balance the load across both us "central1 "a and us "central1 "b.

NEW QUESTION # 261

A company wants to build an application that stores images in a Cloud Storage bucket and wants to generate thumbnails as well as resize the images. They want to use a google managed service that can scale up and scale down to zero automatically with minimal effort. You have been asked to recommend a service. Which GCP service would you suggest?

- A. Google Compute Engine
- B. Cloud Functions
- C. Google App Engine
- D. Google Kubernetes Engine

Answer: B

Explanation:

Explanation

Text Description automatically generated with low confidence

Cloud Functions is Google Cloud's event-driven serverless compute platform. It automatically scales based on the load and requires no additional configuration. You pay only for the resources used.

Ref: <https://cloud.google.com/functions>

While all other options i.e. Google Compute Engine, Google Kubernetes Engine, Google App Engine support autoscaling, it needs to be configured explicitly based on the load and is not as trivial as the scale up or scale down offered by Google's cloud functions.

NEW QUESTION # 262

.....

Our products are the accumulation of professional knowledge worthy practicing and remembering. There are so many specialists who join together and contribute to the success of our Associate-Cloud-Engineer guide quiz just for your needs. Our responsible and patient staff who has being trained strictly before get down to business and interact with customers. Once you have practiced and experienced the quality of our Associate-Cloud-Engineer Exam Preparation, you will remember the serviceability and usefulness of them. It explains why our Associate-Cloud-Engineer practice materials helped over 98 percent of exam candidates get the certificate you dream of successfully. Believe me you can get it too.
