Our C_C4H62_2408 learning guide have a 99% pass rate. This shows what? As long as you use our products, you can pass the exam! Do you want to be one of 99? Quickly purchase our C_C4H62_2408 Exam Questions! And you will find that the coming exam is just a piece of cake in front of you.

SAP Certified Associate - Implementation Consultant - SAP Customer Data Cloud Sample Questions (Q13-Q18):

NEW QUESTION # 13

After a successful login, the registration completion screen is automatically displayed. What is causing this behavior?

- A. There is a new subscription without a value.
- **B. The user didn't accept a mandatory consent.**
- C. Two-factor authentication is enabled.
- D. There is a new schema field without a value.

Answer: B

Explanation:

The registration completion screen is displayed after a successful login when additional information or actions are required to complete the user's profile. The most common cause of this behavior is:

* A: If the user has not accepted a mandatory consent (e.g., terms of service or privacy policy), the system will prompt them to do so via the registration completion screen.

The other options are incorrect:

* B: A new subscription without a value would not trigger the registration completion screen unless it is mandatory.

* C: Two-factor authentication being enabled would not directly trigger the registration completion screen.

* D: A new schema field without a value would only trigger the screen if the field is marked as mandatory.

SAP Customer Data Cloud References:

* Registration Completion Scenarios.

* Mandatory Consents.

NEW QUESTION # 14

Which password attributes can be defined in the Customer Identity policies? Note: There are 2 correct answers to this question.

- A. Min length
- B. Password reset token expiration time
- C. Max length
- D. Max character groups

Answer: A,B

Explanation:

In the Customer Identity policies section of SAP Customer Data Cloud, you can define the following password attributes:

* Option A: Incorrect. The maximum password length is not configurable in the Customer Identity policies. Only the minimum length is enforced.

* Option B: Correct. The password reset token expiration time can be configured to determine how long a password reset link remains valid.

* Option C: Incorrect. The concept of max character groups (e.g., requiring a mix of uppercase, lowercase, numbers, and symbols) is not a configurable attribute in the policies.

* Option D: Correct. The minimum password length can be defined to enforce strong password requirements.

* Password Reset Token Configuration

NEW QUESTION # 15

You are using SAP Enterprise Consent and Preference Management without SAP Customer Identity.

Which API call do you need to use to collect the consent?

- A. accounts.notifyLogin
- B. accounts.login
- C. accounts.setPolicies
- D. accounts.initRegistration

Answer: A

NEW QUESTION # 16

When creating a new schedule in a dataflow, which parameters can you set manually?

Note: There are 3 correct answers to this question.

- A. Execution frequency
- B. Email on success/failure
- C. Schedule ID
- D. Schedule timeout
- E. Schedule name

Answer: A,B,D

NEW QUESTION # 17

You want to export accounts using dataflows and need to ensure the First Name and Last Name fields are formatted in lowercase. How does SAP recommend you do this?

- A. Use the field.rename component.
- B. Use the field.flatten component.
- C. Use the toLowerCase function in the Select parameter of the datasource.read.gigya.account component.
- **D. Use a custom transformation inside the record.evaluate component.**

Answer: D

Explanation:

To ensure that the First Name and Last Name fields are formatted in lowercase during an account export using dataflows, SAP recommends using the record.evaluate component with a custom transformation. This approach allows you to apply JavaScript functions (e.g., toLowerCase) to transform the data as needed.

* Option A: Incorrect. The field.rename component is used to rename fields, not to modify their content.

* Option B: Correct. The record.evaluate component allows you to write custom JavaScript code to transform field values. For example, you can use the toLowerCase function to format the fields in lowercase.

* Option C: Incorrect. The datasource.read.gigya.account component is used to read account data, but it does not support applying transformations like toLowerCase directly in its parameters.

* Option D: Incorrect. The field.flatten component is used to flatten nested JSON structures, not to modify field values.
