

Free D-PWF-DY-A-00 Vce Dumps & Real D-PWF-DY-A-00 Braindumps

Are you concerned for the training material for D-PWF-DY-A-00 certification exam? So, your search is ended as you have got to the place where you can catch the finest D-PWF-DY-A-00 certification exam dumps. Those entire applicants who put efforts in D-PWF-DY-A-00 certification exam want to achieve their goal, but there are diverse means of preparing D-PWF-DY-A-00 Exams. Everyone might have their own approach to discover, how to associate D-PWF-DY-A-00 certified professional. It really doesn't matter how you concoct for the D-PWF-DY-A-00 certification exam, you'd need some provision to make things calmer.

The D-PWF-DY-A-00 exam prep is produced by our expert, is very useful to help customers pass their D-PWF-DY-A-00 exams and get the certificates in a short time. If you want to know the quality of our D-PWF-DY-A-00 guide braindumps before you buy it, you can just free download the demo of our D-PWF-DY-A-00 Exam Questions. We can sure that our D-PWF-DY-A-00 training guide will help you get the certificate easily. If you are willing to believe us and try to learn our D-PWF-DY-A-00 exam torrent, you will get an unexpected result.

EMC D-PWF-DY-A-00 Exam Questions - Pass Your Exam In One Go

In the past ten years, we have made many efforts to perfect our EMC D-PWF-DY-A-00 study materials. Our D-PWF-DY-A-00 study questions cannot tolerate any small mistake. All staff has made great dedication to developing the EMC D-PWF-DY-A-00 Exam simulation. Our professional experts are devoting themselves on the compiling and updating the exam materials.

EMC Dell PowerFlex Implementation Achievement Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which three networks are configured during the PowerFlex implementation process? (Select 3)

- A. pfinc-sdc-mgmt
- B. pfinc-vmotion
- C. flex-node-data
- D. flex-node-mgmt
- E. pfinc-sds-mgmt

Answer: A,C,D

Explanation:

During the PowerFlex implementation process, the following networks are typically configured to ensure proper communication and functionality of the system:

* flex-node-mgmt (Option A):

* This network handles the management traffic for PowerFlex nodes.

* It ensures communication between the nodes and the management interfaces.

- * pfmc-sdc-mgmt (Option B):
- * This network is responsible for managing the communication between the Storage Data Client (SDC) and other PowerFlex components.
- * It ensures proper data access and retrieval from the storage layer.
- * flex-node-data (Option E):
- * The data network facilitates data transfer and communication between nodes in the PowerFlex cluster.
- * This network is critical for high-speed data access and ensuring efficient storage operations.

Why Not the Other Options?

- * Option C: pfmc-sds-mgmt: While this may sound plausible, it is not a standard network configured during the implementation process.
- * Option D: pfmc-vmotion: vMotion is a VMware-specific feature for live migration of VMs and is not a primary PowerFlex network configuration.

NEW QUESTION # 11

Place the PowerFlex implementation steps in the correct order.

Steps	Correct Order
Prepare the environment.	
Deploy the PowerFlex Management Controller	
Perform post-installation tasks.	
Deploy PowerFlex Manager Templates.	
Install PowerFlex Manager.

Answer:

Explanation:

Steps	Correct Order
Prepare the environment.	Prepare the environment.
Deploy the PowerFlex Management Controller	Deploy the PowerFlex Management Controller
Perform post-installation tasks.	Install PowerFlex Manager.
Deploy PowerFlex Manager Templates.	Deploy PowerFlex Manager Templates.
Install PowerFlex Manager.	Perform post-installation tasks.

Navigation: [Previous] [Next]

Explanation:

The implementation of a Dell PowerFlex environment involves a series of well-defined steps that must be followed in a specific order to ensure a successful deployment. Below is a detailed explanation of each step and its placement in the sequence.

Step 1: Prepare the environment

- * What it Does: Preparing the environment involves setting up the physical infrastructure, including servers, networking, and storage components. This step ensures that all hardware and network prerequisites are met before proceeding with the deployment.
- * Verify hardware compatibility (servers, switches, etc.).
- * Configure network settings (VLANs, IP addressing, etc.).
- * Ensure proper power and cooling for the equipment.
- * Why It's First: Without a properly prepared environment, subsequent steps cannot proceed. This foundational step ensures that all components are ready for deployment.

NEW QUESTION # 12

How many days may a PowerFlex cluster remain in a production environment after deployment before a license is required for continued operation?

- A. 60 days
- B. 90 days

- C. 30 days
- D. 120 days

Answer: B

NEW QUESTION # 13

Where are DNS server records configured when deploying the PowerFlex Management Controller VMs?

- **A. Config**
- B. Routes
- C. ifcfg-eth<#>
- D. hosts

Answer: A

Explanation:

When deploying the PowerFlex Management Controller VMs, DNS server records are configured in the Config file. Here's a detailed explanation:

* Why Config (Option B)?

* The Config file contains network-related settings for the PowerFlex Management Controller VMs, including DNS server records. It is the appropriate location to define the DNS server IP addresses to ensure proper name resolution for the cluster.

* Why Not the Other Options?

* Option A: hosts:

* The hosts file is used for static hostname-to-IP address mappings.

* While this is useful for local overrides, it is not where DNS server records are configured.

* Option C: Routes:

* The routes file is used to define static routing for specific network paths but does not handle DNS configurations.

* Option D: ifcfg-eth<#>:

* The ifcfg-eth<#> files configure specific network interface settings (e.g., IP address, netmask, gateway) but do not include DNS server records.

Steps to Configure DNS in the Config File:

* Access the VM console or SSH into the management VM.

* Open the Config file for editing (location and syntax depend on the OS and deployment tools).

* Add the DNS server entries under the appropriate section, e.g., dns1=192.168.x.x and dns2=192.168.x.x.

x.

* Save the changes and restart the network service to apply.

NEW QUESTION # 14

Which tool can be used to install the SDR component in a PowerFlex 4.x cluster?

- A. PowerFlex WebUI
- **B. Installation Manager**
- C. vSphere Plug-In
- D. PowerFlex Manager

Answer: B

Explanation:

The SDR (Storage Data Router) is a critical component of PowerFlex that manages data routing, communication between components (e.g., SDS, SDC), and metadata operations. For PowerFlex 4.x clusters, Installation Manager (IM) is the officially recommended and verified tool for deploying the SDR component.

Key References from Dell PowerFlex Documentation:

* PowerFlex 4.x Installation Guide:

* Installation Manager is a command-line utility used to automate the deployment of PowerFlex components, including SDR nodes. The guide explicitly states that IM simplifies the installation of SDS, SDC, MDM, and SDR nodes across physical or virtual machines.
