To improve our products' quality we employ first-tier experts and professional staff and to ensure that all the clients can pass the test we devote a lot of efforts to compile the Professional-Cloud-Architect learning guide. As long as you study with our Professional-Cloud-Architect exam questions, we won't let you suffer the loss of the money and energy and you will pass the Professional-Cloud-Architect Exam at the first try. After you pass the Professional-Cloud-Architect test you will enjoy the benefits the certificate brings to you such as you will be promoted by your boss in a short time and your wage will surpass your colleagues.

The proximity of perfection on our Professional-Cloud-Architect practice dumps is outstanding. By using our Professional-Cloud-Architect preparation materials, we are sure you will pass your exam smoothly and get your dreamed certification. We have a variety of versions for your reference: PDF & Software & APP version. All those versions are high efficient and accurate with passing rate up to 98 to 100 percent. So our Professional-Cloud-Architect Study Guide is efficient, high-quality for you.

Google Professional-Cloud-Architect Test Dumps Free | Free Professional-Cloud-Architect Test Questions

Do you like to practice study materials on paper? If you do, you can try our Professional-Cloud-Architect exam dumps. Professional-Cloud-Architect PDF version is printable, and you can study anywhere and anytime. We offer you free demo for you to have a try before buying, so that you can have a better understanding of Professional-Cloud-Architect Exam Dumps what you are going to buy. Free update for 365 days is available, and you can get the latest information about the Professional-Cloud-Architect exam dumps timely. The update version will be sent to your email automatically.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q211-Q216):

NEW QUESTION # 211

You have created several preemptible Linux virtual machine instances using Google Compute Engine. You want to properly shut down your application before the virtual machines are preempted.

What should you do?

- A. Create a shutdown script named k99.shutdown in the /etc/rc.6.d/ directory.
- B. Create a shutdown script registered as a xinetd service in Linux and configure a Stackdriver endpoint check to call the service.
- C. Create a shutdown script and use it as the value for a new metadata entry with the key shutdown-script in the Cloud Platform Console when you create the new virtual machine instance.
- D. Create a shutdown script, registered as a xinetd service in Linux, and use the gcloud compute instances add-metadata command to specify the service URL as the value for a new metadata entry with the key shutdown-script-url

Answer: C

Explanation:

<https://cloud.google.com/compute/docs/shutdownscript>

NEW QUESTION # 212

For this question, refer to the TerramEarth case study. To be compliant with European GDPR regulation, TerramEarth is required to delete data generated from its European customers after a period of 36 months when it contains personal data. In the new architecture, this data will be stored in both Cloud Storage and BigQuery. What should you do?

- A. Create a BigQuery table for the European data, and set the table retention period to 36 months. For Cloud Storage, use gsutil to create a SetStorageClass to NONE action when with an Age condition of 36 months.
- B. Create a BigQuery time-partitioned table for the European data, and set the partition period to 36 months. For Cloud Storage, use gsutil to create a SetStorageClass to NONE action with an Age condition of 36 months.
- C. Create a BigQuery table for the European data, and set the table retention period to 36 months. For Cloud Storage, use gsutil to enable lifecycle management using a DELETE action with an Age condition of 36 months.
- D. Create a BigQuery time-partitioned table for the European data, and set the partition expiration period to 36 months. For Cloud Storage, use gsutil to enable lifecycle management using a DELETE action with an Age condition of 36 months.

Answer: D

Explanation:

Explanation:

<https://cloud.google.com/storage/docs/lifecycle>

Topic 7, Mountkirk Games Case 2

Company Overview

Mountkirk Games makes online, session-based, multiplayer games for mobile platforms. They build all of their games using some server-side integration. Historically, they have used cloud providers to lease physical servers.

Due to the unexpected popularity of some of their games, they have had problems scaling their global audience, application servers, MySQL databases, and analytics tools.

Their current model is to write game statistics to files and send them through an ETL tool that loads them into a centralized MySQL database for reporting.

Solution Concept

Mountkirk Games is building a new game, which they expect to be very popular. They plan to deploy the game's backend on Google Compute Engine so they can capture streaming metrics, run intensive analytics, and take advantage of its autoscaling server environment and integrate with a managed NoSQL database.

Business Requirements

- * Increase to a global footprint.
- * Improve uptime - downtime is loss of players.
- * Increase efficiency of the cloud resources we use.
- * Reduce latency to all customers.

Technical Requirements

Requirements for Game Backend Platform

- * Dynamically scale up or down based on game activity.
- * Connect to a transactional database service to manage user profiles and game state.
- * Store game activity in a timeseries database service for future analysis.
- * As the system scales, ensure that data is not lost due to processing backlogs.
- * Run hardened Linux distro.

Requirements for Game Analytics Platform

- * Dynamically scale up or down based on game activity
- * Process incoming data on the fly directly from the game servers
- * Process data that arrives late because of slow mobile networks
- * Allow queries to access at least 10 TB of historical data
- * Process files that are regularly uploaded by users' mobile devices

Executive Statement

Our last successful game did not scale well with our previous cloud provider, resulting in lower user adoption and affecting the game's reputation. Our investors want more key performance indicators (KPIs) to evaluate the speed and stability of the game, as well as other metrics that provide deeper insight into usage patterns so we can adapt the game to target users. Additionally, our current technology stack cannot provide the scale we need, so we want to replace MySQL and move to an environment that provides autoscaling, low latency load balancing, and frees us up from managing physical servers.

NEW QUESTION # 213

Your application needs to process credit card transactions. You want the smallest scope of Payment Card Industry (PCI) compliance without compromising the ability to analyze transactional data and trends relating to which payment methods are used. How should you design your architecture?

- A. Create separate projects that only process credit card data.
- **B. Create a tokenizer service and store only tokenized data.**
- C. Create separate subnetworks and isolate the components that process credit card data.
- D. Enable Logging export to Google BigQuery and use ACLs and views to scope the data shared with the auditor.
- E. Streamline the audit discovery phase by labeling all of the virtual machines (VMs) that process PCI data.

Answer: B

Explanation:

Reference:

<https://www.sans.org/reading-room/whitepapers/compliance/ways-reduce-pci-dss-audit-scope-tokenizing-cardho>

NEW QUESTION # 214

Your company's test suite is a custom C++ application that runs tests throughout each day on Linux virtual machines. The full test suite takes several hours to complete, running on a limited number of on premises servers reserved for testing. Your company wants to move the testing infrastructure to the cloud, to reduce the amount of time it takes to fully test a change to the system, while changing the tests as little as possible. Which cloud infrastructure should you recommend?

- A. Google Cloud Dataproc to run Apache Hadoop jobs to process each test
- **B. Google Compute Engine managed instance groups with auto-scaling**
- C. Google Compute Engine unmanaged instance groups and Network Load Balancer
- D. Google App Engine with Google Stackdriver for logging

Answer: B

Explanation:

<https://cloud.google.com/compute/docs/instance-groups/>

NEW QUESTION # 215

You need to reduce the number of unplanned rollbacks of erroneous production deployments in your company's web hosting platform. Improvement to the QA/Test processes accomplished an 80% reduction.

Which additional two approaches can you take to further reduce the rollbacks? Choose 2 answers.

- **A. Introduce a green-blue deployment model**
- B. Replace the QA environment with canary releases
- C. Reduce the platform's dependency on relational database systems
- D. Replace the platform's relational database systems with a NoSQL database
- **E. Fragment the monolithic platform into microservices**

Answer: A,E

NEW QUESTION # 216

.....

To obtain the Professional-Cloud-Architect certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the Professional-Cloud-Architect exam, you need our help. You are lucky to click into this link for we are the most popular vendor in the market. We have engaged in this career for more than ten years and with our Professional-Cloud-Architect Exam Questions, you will not only get aid to gain your dreaming certification, but also you can enjoy the first-class service online.

Professional-Cloud-Architect Test Dumps Free: <https://www.actualtestpdf.com/Google/Professional-Cloud-Architect-practice-exam-dumps.html>

And you can prepare for your Professional-Cloud-Architect exam with under the guidance of our training materials anywhere at any time, With over a decade's striving, our Professional-Cloud-Architect training materials have become the most widely-lauded and much-anticipated products in industry, We will seldom miss any opportunity to answer our customers' questions as well as solve their problems about the Google Professional-Cloud-Architect exam, Please read followings as below you will find how our Professional-Cloud-Architect exam prep achieves this.

Comparing to spending many money and time on exams they prefer to spend Professional-Cloud-Architect exam collection cost and pass exam easily, especially the Professional-Cloud-Architect exam cost is really expensive and they do not want to try the second time.

2025 Google Professional-Cloud-Architect: Google Certified Professional - Cloud Architect (GCP) –The Best Study Tool

Measurable improvement: Assess your operational effectiveness, And you can prepare for your Professional-Cloud-Architect Exam with under the guidance of our training materials anywhere at any time.

With over a decade's striving, our Professional-Cloud-Architect training materials have become the most widely-lauded and much-anticipated products in industry, We will seldom miss any opportunity to answer our customers' questions as well as solve their problems about the Google Professional-Cloud-Architect exam.

Please read followings as below you will find how our Professional-Cloud-Architect exam prep achieves this, Questions and answers from Google Professional-Cloud-Architect valid test engine are tested by our certified professionals and the accuracy of our questions is 100% guaranteed.
