

Free Download Questions ISTQB-CTAL-TA Exam - Pass ISTQB-CTAL-TA in One Time - Perfect Latest ISTQB-CTAL-TA Exam Preparation

P.S. Free & New ISTQB-CTAL-TA dumps are available on Google Drive shared by DumpsValid: <https://drive.google.com/open?id=1vepo5ZFLsMLu45LyJ8coG41z7nIRrSbA>

ISTQB-CTAL-TA study material has a high quality service team. First of all, the authors of study materials are experts in the field. They have been engaged in research on the development of the industry for many years, and have a keen sense of smell for changes in the examination direction. During your installation, ISTQB-CTAL-TA exam questions hired dedicated experts to provide you with free remote online guidance. During your studies, ISTQB-CTAL-TA Exam Torrent also provides you with free online services for 24 hours, regardless of where and when you are, as long as an email, we will solve all the problems for you. At the same time, if you fail to pass the exam after you have purchased ISTQB-CTAL-TA training materials, you just need to submit your transcript to our customer service staff and you will receive a full refund.

Our ISTQB-CTAL-TA practice prep is so popular and famous for it has the advantage that it can help students improve their test scores by improving their learning efficiency. Therefore, users can pass ISTQB-CTAL-TA exams with very little learning time. For another example, there are some materials that apply to students with professional backgrounds that are difficult for some industry rookie to understand. But our ISTQB-CTAL-TA Learning Materials are compiled to simple language for our customers to understand easily.

Latest ISTQB-CTAL-TA Exam Preparation | New Guide ISTQB-CTAL-TA Files

Most experts agree that the best time to ask for more dough is after you feel your ISTQB-CTAL-TA performance has really stood out. To become a well-rounded person with the help of our ISTQB-CTAL-TA study questions, reducing your academic work to a concrete plan made up of concrete actions allows you to streamline and gain efficiency, while avoiding pseudo work and guilt. Our ISTQB-CTAL-TA Guide materials provide such a learning system where you can improve your study efficiency to a great extent.

ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q38-Q43):

NEW QUESTION # 38

Supercar is an online vehicle sales website specialising in a single manufacturer's Sports Utility Vehicles (SUVs) and saloons. A vehicle has two key elements, power unit and body style. The manufacturer offers three choices of power unit: petrol, diesel and hybrid. There are 3 main body styles Saloon, Hatchback and SUV. SUVs only come as petrol and diesel options. Hybrid is available for Hatchback only. The site will allow an order to be processed if at least one of the chosen vehicle configurations is in stock, otherwise a message will be displayed asking the user to try again later. As a Test Analyst you are asked to review the Supercar specification before starting to design the corresponding usability test cases. Which of the comments below should you make?

- A. It is not clear which message will be displayed when the car is "out of stock"
- B. I have no comments, specification looks OK
- **C. Boundaries for stock levels are ambiguous.**
- D. Dependencies between power unit and body style are ambiguous

Answer: C

Explanation:

The comment that should be made about the Supercar specification is that boundaries for stock levels are ambiguous. The specification states that the site will allow an order to be processed if at least one of the chosen vehicle configurations is in stock, but it does not define what constitutes "in stock" or how many units are available for each configuration. This makes the specification unclear and inconsistent, as it does not provide enough information for testing or implementation. NEW QUESTION # 39

Which of the following statements about defect-based techniques is TRUE?

SELECT ONE OPTION

- A. Defect-based testing is a technique that identifies defects in requirements early in the lifecycle
- **B. In defect-based testing, the type of defect sought is used as the basis for test design**
- C. The coverage criteria for black-box test techniques tend to be less systematic than for defect-based test techniques
- D. Defect-based techniques are mainly used by developers at the component test level

Answer: B

Explanation:

Comprehensive and Detailed in Depth Explanation:

* Defect-based techniques use the knowledge of defects that have occurred in the past to develop test cases that target similar types of issues.

* Option C correctly states that defect-based testing focuses on using known defect types as the basis for designing tests.

* Option A is incorrect because defect-based testing can be applied at various levels, not just the component level.

* Option B is incorrect since defect-based techniques do not necessarily guarantee more systematic coverage than black-box techniques.

* Option D is incorrect because defect-based testing focuses on detecting specific defect types rather than verifying requirements early.

Hence, the correct answer is C (In defect-based testing, the type of defect sought is used as the basis for test design).

NEW QUESTION # 40

Which ONE of the following test tools would MOST likely be used as part of test design?

SELECT ONE OPTION

- **A. Classification tree tools**
- B. Dynamic analysis tools
- C. Comparison tools
- D. Coverage tools

Answer: A

Explanation:

Comprehensive and Detailed in Depth Explanation:

* Classification tree tools are specifically used during the test design phase to visualize combinations of input data and generate test cases.

* Coverage tools (A) are used during test execution to measure how much of the code has been tested.

* Dynamic analysis tools (B) are used to find runtime issues, not during test design.

* Comparison tools (D) are used to compare expected and actual outputs during test execution.

Therefore, the correct answer is C (Classification tree tools).

NEW QUESTION # 41

For the use case Copy A4 to A4 for a new copier, the following scenarios were identified.

Basic scenario single-sided to single-sided.

Alternatives single-sided to double-sided, copy of a set, copy using the automatic document feeder
Errors: no paper in paper tray, paper jam, out of staples.

What is the minimum number of test cases needed to achieve the minimum acceptable level of coverage for this use case?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Seven test cases are needed to achieve the minimum acceptable level of coverage for this use case. A use case is a technique that describes the interactions between a system and its actors to achieve a specific goal. A use case consists of a basic scenario and alternative scenarios that describe the normal and exceptional flows of events. The minimum acceptable level of coverage for a use case is achieved when at least one test case covers each scenario and each error condition. The scenarios and error conditions for this use case are:

* Basic scenario: single-sided to single-sided

* Alternatives: single-sided to double-sided, copy of a set, copy using the automatic document feeder

* Errors: no paper in paper tray, paper jam, out of staples

The number of test cases is equal to the number of scenarios and error conditions, which is 7. Verified References: [ISTQB Certified Tester Advanced Level Test Analyst CTAL-TA], Section 3.6.1, page 43.

NEW QUESTION # 42

Which of the following statements BEST describes checklist-based and black-box test techniques?

SELECT ONE OPTION

- A. Checklists should only be used as a source of test design for inexperienced testers; requirement specifications are often used as the basis for applying black-box techniques
- **B. The checklist-based technique is most effective when applied by experienced testers; black-box techniques are most effective applied against a well-specified test basis**
- C. Checklist-based testing derives tests from lists which focus on defects; black-box techniques find defects through systematic test case design
- D. The checklist-based technique produces consistent, reproducible test cases; test cases produced by black-box techniques are less systematic

Answer: B

Explanation:

Comprehensive and Detailed in Depth Explanation:

* A. Correct because checklist-based testing relies on the experience of testers to be effective, while black-box techniques are more efficient when the test basis (like requirements) is well defined.

* B. Incorrect because checklist-based testing does not necessarily focus on defects.

* C. Incorrect because checklists are not limited to inexperienced testers.

* D. Incorrect because black-box techniques are designed to be systematic and structured.

Therefore, the correct answer is A (The checklist-based technique is most effective when applied by experienced testers; black-box techniques are most effective applied against a well-specified test basis).

NEW QUESTION # 43

.....

The ISTQB Questions PDF format can be printed which means you can do a paper study. You can also use the ISTQB ISTQB-CTAL-TA PDF questions format via smartphones, tablets, and laptops. You can access this ISTQB ISTQB-CTAL-TA PDF file in libraries and classrooms in your free time so you can prepare for the (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) (ISTQB-CTAL-TA) certification exam without wasting your time.
