## EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q16-Q21):

### NEW QUESTION # 16

Question:

In traditional provisioning, which two factors determine the availability, capacity, and performance of the RAID set?

- A. Capacity of drives
- **B. The number of drives in the RAID set**
- C. Make of drives
- **D. The RAID level**

**Answer: B,D**

Explanation:

In traditional storage provisioning, the RAID configuration significantly impacts the storage system's characteristics:

\* RAID Level: Determines data redundancy and fault tolerance. For example, RAID 1 mirrors data, providing high availability, while RAID 5 uses parity, balancing performance and redundancy.

\* Number of Drives: Affects both capacity and performance. More drives can increase total storage capacity and improve performance through parallel data access.

\* Make of Drives: While drive quality matters, it's less influential than RAID configuration in determining overall system characteristics.

\* Capacity of Drives: Impacts total storage size but doesn't directly influence performance or availability as significantly as RAID level and drive count.

### NEW QUESTION # 17

Question:

An organization needs to adhere to compliance and lower the cost of the primary storage. What process should they implement?

- A. Data compression
- B. Data encryption
- C. Data backup
- **D. Data archiving**

**Answer: D**

Explanation:

Data archiving involves moving infrequently accessed data to a separate storage system, freeing up space on primary storage and reducing costs. It also aids in compliance by retaining data for specified periods, as required by various regulations.

\* Data backup:Creates copies of data for recovery purposes but doesn't necessarily reduce primary storage usage.

\* Data archiving:Moves less frequently accessed data to cost-effective storage, aiding compliance and reducing primary storage costs.

\* Data encryption:Secures data but doesn't impact storage costs or compliance retention.

\* Data compression:Reduces data size but may not meet compliance requirements for data retention.

### NEW QUESTION # 18

Question:

An IT team needs to reduce or eliminate data frame loss during times of network congestion in their converged Ethernet network.

What standard should they implement?

- A. QoS
- B. VLAN
- C. NAT
- **D. DCB**

**Answer: D**

Explanation:

Data Center Bridging (DCB) is a set of IEEE standards designed to enhance Ethernet for converged data center networks.

DCB includes priority-based flow control (PFC) to reduce frame loss during congestion.

Ensures lossless Ethernet transport, crucial for storage traffic (like FCoE).

\* QoS (A) prioritizes traffic but doesn't guarantee lossless transport.

\* NAT (C) translates IP addresses, not relevant to lossless transport.

\* VLAN (D) segments networks logically but doesn't address congestion.

### NEW QUESTION # 19

Question:

Which layer of the OSI reference model provides logical end-to-end connections, sequencing, and integrity?

- **A. Transport**
- B. Session
- C. Data Link
- D. Presentation

**Answer: A**

Explanation:

The Transport layer (Layer 4) of the OSI model ensures reliable data transfer between systems by providing:

End-to-end connections- manages communication sessions

Sequencing- orders data packets

Integrity- error detection and correction

\* Session (Layer 5): Manages sessions and controls dialogues between systems.

\* Data Link (Layer 2): Deals with local network frame delivery.

\* Presentation (Layer 6): Translates data formats (like encryption, compression).

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Network Technologies.

### NEW QUESTION # 20

Question:

A storage administrator needs to track the performance and availability of storage components and services.

Which storage management function would provide this information?

- A. Reporting
- **B. Monitoring**
- C. Alerting
- D. Infrastructure discovery

**Answer: B**

Explanation:

Monitoring is the ongoing process of observing and tracking the performance and availability of IT infrastructure, including:

Storage devices

File systems

Ports and connectivity

It helps ensure service levels are met and detect potential issues.

\* Reporting: Summarizes data (often based on monitoring data).

\* Alerting: Notifies of specific events or thresholds (also uses monitoring data).

\* Infrastructure discovery: Detects and inventories devices.
