Pass Guaranteed Quiz HP - HPE7-A08 - HPE Aruba Networking Switching Professional Exam Latest Free Study Material

Whether you are a newcomer or an old man with more experience, HP HPE7-A08 Study Materials will be your best choice for our professional experts compiled them based on changes in the examination outlines over the years and industry trends. HP HPE7-A08 test torrent not only help you to improve the efficiency of learning, but also help you to shorten the review time of up to several months to one month or even two or three weeks, so that you use the least time and effort to get the maximum improvement.

HPE Aruba Networking Switching Professional Exam Sample Questions (Q153-Q158):

NEW QUESTION # 153

You are attempting to configure an interface, but you are seeing the error message below. What could explain this?

Access-1(config)# interface 1/1/1
Invalid input: interface

- A. Authorization is enabled for CLI commands
- **B. The switch is being managed by HPE Aruba Networking Central**
- C. The switch is in password recovery mode
- D. The command must be run from the manager context

Answer: B

NEW QUESTION # 154

What does it mean when an event like the one below is seen on the HPE Aruba Networking CX switch?

2024-04-04T08:35:38.312254+00:00 ICX-Core-1 hpe-vaxd[2167]: Event[701|LOG_INFO|AMM1/1|VSX2 state local up, remote down]

- **A. VSX secondary switch is down.**
- B. VSX keepalive has detected that the secondary member is down.
- C. The multichassis LAG 2 interface is down on both switches.
- D. The physical interface of LAG 2 on the secondary VSX member is down.

Answer: A

Explanation:

The event message:

perl

Copy

2024-04-04T08:35:38.312254+00:00 ICX-Core-1 hpe-vaxd[2167]: Event[701|LOG_INFO|AMM1/1|VSX2 state local up, remote down] indicates that the local VSX member is up, but the remote VSX member is down. In a VSX pair, both switches must be operational for full redundancy and synchronization.

This log means the secondary VSX switch (remote) is down or unreachable, causing loss of synchronization and possibly traffic failover issues.

Option B (keepalive detection) is related but the event specifically shows the state of the remote switch being down.

Options C and D refer to LAG or interface state, which are not what this log entry describes.

NEW QUESTION # 155

A network administrator is tasked to set up BGP in the company's network. The administrator is defining an eBGP peering between an AOS-CX switch and a directly-connected service provider.

The administrator has configured the following on the AOS-CX switch:

```
switch(config)# interface loopback 0
switch(config-loopback-if)# ip address 10.1.1.1/32
switch(config-loopback-if)# exit
switch(config)# interface 1/1/1
switch(config-if)# no shutdown
switch(config-if)# routing
switch(config-if)# ip address 192.168.1.2/30
switch(config-if)# exit
switch(config)# router bgp 64500
switch(config-bgp)# neighbor 192.168.1.1 remote-as 64511
switch(config-bgp)# bgp router-id 192.168.1.2
switch(config-bgp)# address-family ipv4 unicast
switch(config-bgp-ipv4-uc)# exit
```

However, when using the "show bgp all summary" command, the state does not display

"Established" for the eBGP peer. What must the administrator configure to fix this issue?

- A. router bgp 64500 neighbor 192.168.1.1 update-source loopback0
- B. router bgp 64500 enable
- **C. router bgp 64500 address-family ipv4 unicast neighbor 192.168.1.1 activate**
- D. router bgp 64500 neighbor 192.168.1.1 ebgp-multihop

Answer: C

NEW QUESTION # 156

A network engineer is setting up BGP on AOS-CX switches. The engineer is establishing two different eBGP peering's to two different service providers. The engineer has dozens of contiguous C-class public networks that need to be advertised to the two service providers. The engineer manually defines the networks to be advertised individually with the "network" command. How can an administrator advertise only a summarized route to the two service providers?

- A. Enable auto-summarization in the IPv4 address family of the BGP configuration
- B. Create a summarized static route and redistribute this into OSPF
- C. Create a summarized route in OSPF
- **D. Summarize the networks with the "aggregate-address" BGP command**

Answer: D

NEW QUESTION # 157

Which concept is implemented using Aruba's dynamic segmentation?

- A. Zero Touch Provisioning
- **B. Colorless port**
- C. Root of trust
- D. Device fingerprinting

Answer: B

NEW QUESTION # 158

.....

The passing rate of our HPE7-A08 study material is very high, and it is about 99%. We provide free download and tryout of the HPE7-A08 question torrent, and we will update the HPE7-A08 exam torrent frequently to guarantee that you can get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our HPE7-A08 Latest Questions are compiled by the experienced professionals elaborately. So it will be very convenient for you to buy our product and it will do a lot of good to you.
