Valid CTFL_Syll_4.0 Test Sims, Valid CTFL_Syll_4.0 Exam Materials

There are three versions of our CTFL_Syll_4.0 exam questions. And all of the PDF version, online engine and windows software of the CTFL_Syll_4.0 study guide will be tested for many times. Although it is not easy to solve all technology problems, we have excellent experts who never stop trying. And whenever our customers have any problems on our CTFL_Syll_4.0 Practice Engine, our experts will help them solve them at the first time.

ISQI ISTQB Certified Tester Foundation Level (CTFL) v4.0 Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which sequence of state transitions is INCORRECT in accordance with the following description?

To provide for disaster recovery a system (designated as A) has been provided with a backup system (designated as B). Only one of them can be active at a time. When A goes down, B becomes active. When A comes back up then B becomes inactive and A becomes active again. However, when A is down and B also goes down then a message is sent to the system administrator. After this once A comes back up, A becomes active or if B comes up then B becomes Active.

- A. A is active and B is inactive then A goes down, B becomes active.
- **B. A and B are both down then A and B both come back up at the same time. A should become the active system and B should be inactive**
- C. A comes up when B is active and A was down. Now A becomes active and B becomes inactive.
- D. A is active and B is inactive. A goes down. B becomes active then B goes down. A is made active

Answer: B

Explanation:

According to the description provided, when both systems A and B come back up at the same time, the process should involve a decision about which system should become active. However, the description states that if both systems come up simultaneously, one should become active based on a specific condition or precedence. Generally, in disaster recovery systems, there are protocols to avoid both systems becoming active simultaneously to prevent conflicts. Therefore, the transition where both A and B come back up at the same time and A becomes active while B becomes inactive without any conflict or decision-making step is incorrect.

NEW QUESTION # 42

Which ONE of the following options CANNOT be subjected to static analysis?

- A. Source code
- B. BPMN (Business Process Modeling and Notation) models
- **C. COTS (Commercial off-the-shelf)**
- D. UML (Unified Modeling Language) models

Answer: C

Explanation:

Static analysis requires access to work products like source code, models, or documentation, making it impossible to analyze Commercial off-the-shelf (COTS) software (A) because its source code is typically unavailable. Static analysis is applicable to source code (B), BPMN models (C), and UML diagrams (D).

NEW QUESTION # 43

The acceptance criteria associated with a user story:

- A. are often documented following in rule-oriented format using the following template: "As a [role], I want [feature], so that I can [benefit]"
- B. are often written in a rule-oriented format using the template referred to as "Given/When/Then"
- **C. can be written in different formats and represent an aspect of a user story referred to as confirmation' of the so called "3 C's"**
- D. must be written in one of the two following formats: scenario-oriented or rule-oriented

Answer: C

Explanation:

The acceptance criteria associated with a user story are the conditions that must be met for the user story to be considered done and

to deliver the expected value to the user. They are often written in different formats, such as rule-oriented, scenario-oriented, or table-oriented, depending on the nature and complexity of the user story. They represent an aspect of a user story referred to as confirmation, which is one of the so called "3 C" s of user stories. The other two aspects are card and conversation. Card refers to the concise and informal description of the user story, usually following the template: "As a [role], I want [feature], so that I can [benefit]". Conversation refers to the ongoing dialogue between the stakeholders and the team members to clarify and refine the user story and its acceptance criteria. Therefore, option C is the correct answer.

NEW QUESTION # 44

Consider the following examples of risks identified in different software development projects:

[I]. The contrast color ratio for both normal text and large text of a website does not comply with the applicable accessibility guidelines, making it difficult for many users to read the content on the pages

[II]. A development vendor fails to deliver their software system on time, causing significant delays to system integration testing activities that have been planned as part of a development project for a system of systems

[III]. People in the test team do not have sufficient skills to automate tests at the test levels required by the test automation strategy which does not allow production of an effective regression test suite

[IV]. In a web application, data from untrusted sources is not subject to proper input validation, making the application vulnerable to several security attacks Which of the following statements is true?

- A. [IV] is a product risk; [I], [II] and [III] are project risks
- B. [I] and [IV] are product risks. [II] and [III] are project risks
- C. [II], [III] and [IV] are product risks; [I] is a project risk
- D. [I] and [III] are product risks; [II] and [IV] are project risks

Answer: B

Explanation:

This answer is correct because product risks are risks that affect the quality of the software product, such as defects, failures, or non-compliance with requirements or standards. Project risks are risks that affect the project's schedule, budget, resources, or scope, such as delays, cost overruns, skill gaps, or scope changes. In this case, [I] and [IV] are product risks, as they relate to the accessibility and security of the software product, which are quality attributes. [II] and [III] are project risks, as they relate to the delivery time and the test automation skills of the test team, which are project factors. NEW QUESTION # 45

Which of the following statements is not correct?

- A. Identifying defects may be perceived as criticism against product
- B. Looking for defects in a system may require ignoring system details
- C. Looking for defects in system requires professional pessimism and curiosity
- D. Testing is often seen as a destructive activity instead of constructive activity

Answer: B

Explanation:

* Looking for defects in a system does not require ignoring system details, but rather paying attention to them and understanding how they affect the system's quality, functionality, and usability. Ignoring system details could lead to missing important defects or testing irrelevant aspects of the system.

* Identifying defects may be perceived as criticism against product, especially by the developers or stakeholders who are invested in the product's success. However, identifying defects is not meant to be a personal attack, but rather a constructive feedback that helps to improve the product and ensure its alignment with the requirements and expectations of the users and clients.

* Looking for defects in system requires professional pessimism and curiosity, as testers need to anticipate and explore the possible ways that the system could fail, malfunction, or behave unexpectedly.

Professional pessimism means being skeptical and critical of the system's quality and reliability, while curiosity means being eager and interested in finding out the root causes and consequences of the defects.

* Testing is often seen as a destructive activity instead of constructive activity, as it involves finding and reporting the flaws and weaknesses of the system, rather than creating or enhancing it. However, testing is actually a constructive activity, as it contributes to the system's improvement, verification, validation, and optimization, and ultimately to the delivery of a high-quality product that meets

the needs and expectations of the users and clients.

NEW QUESTION # 46

.....

With the help of performance reports of ISTQB Certified Tester Foundation Level (CTFL) v4.0 (CTFL_Syll_4.0) Desktop practice exam software, you can gauge and improve your growth. You can also alter the duration and ISQI CTFL_Syll_4.0 Questions numbers in your practice tests. Questions of this ISTQB Certified Tester Foundation Level (CTFL) v4.0 (CTFL_Syll_4.0) mock test closely resemble the format of the actual test.

Valid CTFL_Syll_4.0 Test Sims: https://www.verifeddumps.com/CTFL_Syll_4.0-valid-exam-braindumps.html

Just choose ISTQB Foundation Level guide question to improve your knowledge to pass CTFL_Syll_4.0 exam, which is your testimony of competence, Our CTFL_Syll_4.0 exam dumps are customizable, so you can set the time and questions according to your needs, The CTFL_Syll_4.0 exam questions are the perfect form of a complete set of teaching material, teaching outline will outline all the knowledge points covered, comprehensive and no dead angle for the CTFL_Syll_4.0 candidates presents the proposition scope and trend of each year, This Web Simulator is for Projecy Managers and Leads that are ready to manage complex projects and would like to take the CTFL_Syll_4.0 certification exam.

Installing Apps from the Mac App Store, Others CTFL_Syll_4.0 moved on to new schemes, looking to make just as much money, only this time, with less work required, Just choose ISTQB Foundation Level guide question to improve your knowledge to Pass CTFL_Syll_4.0 Exam, which is your testimony of competence.
