Reliable Test 156-836 Test, Discount 156-836 Code

For candidates who have little time to prepare for the exam, buying high-quality 156-836 exam materials is quite necessary. With the experienced professionals to edit, 156-836 exam materials of us are high-quality, and they will help you pass the exam and get the certificate just one time. You just need to spend about 48 to 72 hours on practicing, and you can pass the exam. We also pass guarantee and money back guarantee if you fail to pass the exam. We provide you with free update for 365 days if you purchase 156-836 Exam Materials from us.

Individuals who have the CCSE R80 or higher certification are eligible to take the CheckPoint 156-836 Exam. They must have prior experience working with Check Point Maestro and are expected to demonstrate advanced proficiency in this area. Check Point Certified Maestro Expert - R81 (CCME) certification is ideal for professionals working in the fields of network administration, IT security, and technology consulting.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q52-Q57):

NEW QUESTION # 52

What is the throughput penalty of Security Group?

- A. 1% per member
- B. Depends on the type of Appliance
- C. 5% per member
- D. 10% per Security Group with no relation to the number of members

Answer: A

Explanation:

Check Point reduced throughput degradation to 1% per added SGMs. For example, the overall throughput degradation is 10% for 10 SGMs in a Security Group. Check Point aims to reduce this even further in the future.

NEW QUESTION # 53

What is the Correction Layer mechanism?

- A. The load-balancing mechanism used by the MHO.
- B. Enforces the access policy on the SGMs and synchronizes the enforcement verdict to other SGMs in the SG.
- C. The MHO's distribution algorithm which determines the handling SGM for a given connection.
- D. Ensures asymmetric traffic is handled properly, especially in the case of NAT or VPNs.

Answer: D

Explanation:

The Correction Layer mechanism is a Maestro component that ensures that packets from the same connection are handled by the same Security Group Module (SGM) in a multi-appliance system. This is especially important when NAT or VPNs are involved, as packets sent from the client to the server can be distributed to a different SGM than packets from the same session sent from the server to the client. The Correction Layer must then forward the packet to the correct SGM.

NEW QUESTION # 54

What cannot be a reason for "Failed to get remote orchestrator interfaces" error message, when clicking on "Orchestrator" in WebUI

- A. Remote orchestrator has no empty interfaces
- B. Single orchestrator environment, but configured Orchestrator amount is 2
- C. One orchestrator only, but Orchestrator amount is 2 or no Sync in between orchestrators
- D. No Sync between orchestrators

Answer: A

Explanation:

One of the possible reasons for the "Failed to get remote orchestrator interfaces" error message, when clicking on "Orchestrator" in WebUI, is that the remote orchestrator has no empty interfaces that can be assigned to a security group. This can happen if all the interfaces on the remote orchestrator are already part of configured security groups, or if the remote orchestrator has no physical interfaces at all. In this case, the WebUI cannot display the unassigned interfaces of the remote orchestrator, and shows the error message.

NEW QUESTION # 55

What is the default Distribution mode?

- A. User
- **B. Auto-topology**
- C. Manual-General
- D. Network

Answer: B

Explanation:

Auto-topology is the default distribution mode for Maestro Security Groups. In this mode, the Orchestrator assigns packets to a Security Group Member based on the topology of the port defined in the gateway object.

Each port is either in user mode or network mode depending on the topology. User mode means that the port is connected to the internal network and network mode means that the port is connected to the external network. The Orchestrator uses a hash function to map each source IP or destination IP to a specific SGM, depending on the mode of the port. This mode ensures that all packets with the same source IP or destination IP are processed by the same SGM, regardless of the port or protocol.

NEW QUESTION # 56

Splitter cannot be used _____

- **A. To connect single port on orchestrator to the same Appliance**
- B. To connect single port on orchestrator to multiple Appliances
- C. To connect single port on orchestrator to multiple port on external switch
- D. To connect single port on Appliance to multiple ports on the orchestrator

Answer: A
