

Free PDF 2025 2V0-16.25: VMware vSphere Foundation 9.0 Administrator Marvelous New Test Cost

DumpStillValid is famous for its high-quality in this field especially for VMware 2V0-16.25 certification exams. It has been accepted by thousands of candidates who practice our 2V0-16.25 study materials for their exam. In this major environment, people are facing more job pressure. So they want to get a VMware vSphere Foundation 9.0 Administrator 2V0-16.25 Certification rise above the common herd.

In order to facilitate the wide variety of users' needs the 2V0-16.25 study guide have developed three models with the highest application rate in the present - PDF, software and online. Online mode of another name is App of study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the 2V0-16.25 simulating materials of this learning model, users only need to open the App link, you can quickly open the learning content in real time in the ways of the 2V0-16.25 study materials.

>> New 2V0-16.25 Test Cost <<

Free PDF VMware - Fantastic New 2V0-16.25 Test Cost

Our 2V0-16.25 exam guide can stand the test of market as well as customers of various needs with passing rate up to 98 to 100 percent, which is a strong proof that attest to their efficacy. Our 2V0-16.25 practice materials can provide the evidence of your working proficiency, and the high-efficiency of them are provided by our company can effectively advance your pace of making progress and speed up your pace of reviving it. So our 2V0-16.25 Practice Engine is your ideal choice.

VMware 2V0-16.25 Exam Syllabus Topics:

Topic	Details
Topic 1	Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices.
Topic 2	IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively.

Topic 3	VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components.
Topic 4	Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance.
Topic 5	Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q14-Q19):

NEW QUESTION # 14

In VMware Cloud Foundation (VCF) Operations, which node type is responsible for providing fault tolerance for administrative functions within the VCF Operations cluster?

- A. Primary Node
- **B. Replica Node**
- C. Witness Node
- D. Data Node

Answer: B

Explanation:

In VCF Operations (vRealize Operations) cluster architecture:

* The Primary Node handles administration and management.

* The Replica Node provides fault tolerance for the Primary Node, ensuring that administrative functions remain available in case of failure.

* Data Nodes handle data collection and analytics.

* Witness Node# Not a role in VCF Operations; relevant to vSAN clusters.

Thus, the node type providing fault tolerance for administrative functions is the Replica Node.

NEW QUESTION # 15

An administrator needs to ensure that only specific users can manage the virtual machines (VM) in a specific VMware vCenter folder.

Which three steps are required to accomplish this? (Choose three.)

- A. Create a datastore cluster.
- **B. Assign the new role to the appropriate users/groups.**
- C. Add the identity source to vCenter.
- **D. Apply the role to the specific vCenter folder.**
- **E. Create a new role in vCenter with VM management permissions.**

Answer: B,D,E

Explanation:

To ensure that only specific users can manage VMs in a specific VMware vCenter folder, the following three steps are required:

* Create a new role in vCenter with VM management permissions(Answer B):You must define a custom role tailored to managing VMs, which includes permissions such as powering on/off VMs, editing VM settings, and accessing consoles. This role must include the appropriate privileges under the

"Virtual machine" category in vCenter permissions.

* Apply the role to the specific vCenter folder(Answer C):The custom role needs to be applied directly to the target vCenter folder. This enables scope-based access control, where permissions are applied only to VMs within that folder.

* Assign the new role to the appropriate users/groups(Answer A):After creating the role and applying it to the folder, the role must be associated with the correct users or groups. This step uses the vCenter Server's identity source integration to assign roles.

Why the other options are incorrect:

* D. Add the identity source to vCenter:This is a prerequisite step for any role assignment but is not directly required in this specific scenario if the identity source is already configured.

* E. Create a datastore cluster:This is unrelated to managing VM access. Datastore clusters pertain to storage management and are not involved in user permissions or role assignments.

VMware vSphere 9.0 PDF, section on vCenter Server Permissions Management.

NEW QUESTION # 16

What are two roles of VMware Tools within a virtual machine (VM)? (Choose two.)

- A. Stores the virtual machine configuration files.
- B. Manages the virtual machine hardware configuration.
- **C. Provides Guest OS heartbeat service.**
- D. Provides journaling of file system metadata changes for fast recovery.
- **E. Provides device drivers for the VM.**

Answer: C,E

Explanation:

VMware Tools is a suite of services and drivers installed in a VM. It provides:

* Guest OS heartbeat service (B):Used by vCenter to monitor VM health.

* Device drivers (C):Optimized drivers for network, storage, graphics, and mouse/keyboard integration.

Other options:

* A. Journaling of file system metadata# Provided by the guest OS filesystem, not VMware Tools.

* D. Stores VM configuration files# Handled by vCenter/ESXi, not VMware Tools.

* E. Manages VM hardware configuration# Done via vSphere Client, not VMware Tools.

NEW QUESTION # 17

An administrator is tasked to create a new storage policy for an eight-node VMware vSAN Original Storage Architecture (OSA) cluster.

The following specifications have been provided:

* Tolerate up to two host failures.

* Ensure maximum usable capacity.

Which storage policy settings must the administrator configure?

- A. 2 failures - RAID-5
- B. 1 failure - RAID-1
- C. 3 failures - RAID-1
- D. 1 failure - RAID-5

Answer: A

Explanation:

For an 8-node vSAN OSA cluster, the administrator needs a storage policy that:

- * Tolerates 2 host failures, and
- * Provides maximum usable capacity.
- * RAID-5/6 (erasure coding) is more capacity-efficient than RAID-1 mirroring.
- * To tolerate 2 failures, the correct policy is RAID-5 with FTT=2.
- * RAID-1 (mirroring) would consume far more capacity, reducing usable space.

Other options:

- * A. 1 failure - RAID-1# Only tolerates one failure.
- * C. 3 failures - RAID-1# Provides higher resilience but uses much more capacity, not maximum efficiency.
- * D. 1 failure - RAID-5# Tolerates only one failure.

NEW QUESTION # 18

An administrator has been tasked with creating a custom alert for an object in VMware Cloud Foundation (VCF) Operations.

When creating the alert, the administrator completes the following:

- * A new symptom definition.
- * A new alert definition.
- * Select the Object type.

What additional step must the administrator take to complete the stated objective and ensure the alert is triggered?

- A. Create a new Payload Template.
- B. Create and enable a super metric for read latency in the Active Policy.
- C. Create an instance of the Rest Notification Plugin.
- D. Enable the alert in an Active Policy.

Answer: D

Explanation:

When creating a custom alert in VCF Operations, the final required step is:

- * Enable the alert in an Active Policy, so it applies to the target objects.

Without policy activation, the alert exists but will never trigger.

Other options:

- * A. Super metric# Only required if monitoring a custom metric, not for standard alerts.
- * B. REST Notification Plugin# Used for outbound integration, not triggering alerts.
- * C. Payload Template# Used in notifications, not in core alert configuration.
