Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which of the following statements about the data center's leaf-spine topology (clos network) is FALSE?

- A. It uses the spanning tree protocol to avoid forwarding loops.
- B. Each leaf router is connected to all the spine routers in the cluster.
- C. It provides a consistent path for east-west traffic.
- D. It uses ECMP to distribute traffic across duplicate links.

Answer: A

Explanation:

The leaf-spine (Clos) topology does not use the spanning tree protocol because it relies on equal-cost multipath (ECMP) routing to prevent loops and efficiently utilize all available paths. Spanning tree is typically avoided in modern data center fabrics to enable full bandwidth utilization.
