2025 CBPA Exam Outline | Valid ABPMP Test CBPA Simulator: ABPMP International Certified Business Process Associate (CBPA) Exam

The CBPA exam questions that Pass4guide provide with you is compiled by professionals elaborately and boosts varied versions: PDF version, Soft version and APP version, which aimed to help you pass the CBPA exam by the method which is convenient for you. Our CBPA training braindump is not only cheaper than other dumps but also more effective. The high pass rate of our CBPA study materials has been approved by thousands of candidates, they recognized our website as only study tool to pass CBPA exam.

ABPMP International Certified Business Process Associate (CBPA) Exam Sample Questions (Q88-Q93):

NEW QUESTION # 88

Which statement is FALSE regarding Business Process Management (BPM)?

- **A. BPM is a deep understanding of end-to-end interactions between an organization and its customers.**
- B. BPM deals with end-to-end processes.
- C. BPM includes modeling, analysis, design, implementation, and diagnosis of processes.
- D. BPM is supported by information technology (IT) tools which can be used for modeling, simulating, and automating business processes.

Answer: A

Explanation:

Option C is false because BPM is not just about customer interactions—it encompasses a broader scope, including internal processes, support systems, governance, and performance across the organization. While customer interaction is important, BPM's scope is comprehensive, managing all process types including primary, support, and management processes.

According to ABPMP CBOK v4.0:

"BPM is a disciplined approach to identify, design, execute, document, measure, monitor, and control both automated and non-automated business processes to achieve consistent, targeted results aligned with an organization's strategic goals."

- Chapter 1, Introduction to BPM

Reference: ABPMP CBOK, Chapter 1 - Introduction to BPM

NEW QUESTION # 89

The activity of formally monitoring processes with metrics is known as

- **A. Process performance measurement**
- B. Process cycle measurement
- C. Process assessment
- D. Process measurement

Answer: A

Explanation:

Process performance measurement is the practice of systematically tracking and evaluating actual results of business processes using pre-defined metrics. It forms the feedback loop for continuous process improvement and governance.

"Process performance measurement entails gathering, tracking, and analyzing performance data against defined metrics (KPIs) to evaluate the efficiency and effectiveness of a process."

- ABPMP CBOK, Chapter 6 - Process Performance Management

Purpose includes:

- * Establishing baselines
- * Identifying underperforming processes
- * Supporting data-driven decision-making

Reference: ABPMP CBOK, Chapter 6 - Process Performance Management

NEW QUESTION # 90

Which is the best description for a RACI chart?

- A. It shows the relationships of roles in a project database
- B. A diagram that shows the structure of an organization, its job roles, and reporting relationship hierarchies
- C. A framework for assigning roles for a full strategic planning and management system
- **D. It describes responsibilities by role for communicating and completing tasks or deliverables for a project or business process**

Answer: D

Explanation:

A RACI chart (Responsible, Accountable, Consulted, Informed) is a responsibility assignment matrix used to clarify who does what in a process or project. It is a powerful tool for role definition and communication, ensuring that there is no ambiguity regarding task ownership.

"A RACI matrix is a tool to define the roles and responsibilities for process tasks and deliverables. It prevents overlaps or gaps by assigning one or more roles to each activity using RACI codes."

- ABPMP CBOK, Chapter 9 - Process Organization

Typical RACI roles:

- * Responsible: Who performs the task
- * Accountable: Who owns the result
- * Consulted: Who provides input
- * Informed: Who needs updates

Reference: ABPMP CBOK, Chapter 9 - Process Organization

NEW QUESTION # 91

How can we ensure a continuous flow in process design?

- **A. In a Lean approach, identify anything that impedes or slows down the value stream**
- B. Document the logical flow of work
- C. Create a graphical representation of the value-added steps in a process
- D. Document how the customer pays for the output of the value stream

Answer: A

Explanation:

To maintain continuous process flow, especially in Lean process design, it's vital to identify and eliminate waste, blockers, and inefficiencies in the value stream. This allows processes to operate smoothly without unnecessary interruptions.

"In process design, applying Lean principles such as value stream mapping helps identify delays, redundancies, and non-value-adding steps, which disrupt continuous flow."

- ABPMP CBOK, Chapter 5 - Process Design

Continuous flow ensures:

- * Faster cycle times
- * Better customer responsiveness
- * Higher throughput with fewer delays

Reference: ABPMP CBOK, Chapter 5 - Process Design

NEW QUESTION # 92

Which is the BEST way to understand what to measure in a process?

- A. Understand what is quantitative versus qualitative results
- B. Define what is manual versus automated and measurable versus non-measurable
- C. Understand what is financial versus non-financial data
- **D. Measure the output of the process and not the activity to create the output**

Answer: D

Explanation:

In BPM, measurement should focus on process outputs, not merely internal activities. Output-focused measurement ensures that the process is assessed based on results delivered to the customer or stakeholder, supporting value creation.

"Effective process measurement begins with identifying the output and outcome the process is intended to produce. Measuring outputs aligns with customer expectations and business value delivery."

- ABPMP CBOK, Chapter 6 - Process Performance Management

Why output-focused measurement matters:

- * Reflects process effectiveness
- * Aligns with customer satisfaction
- * Links directly to business goals

Reference: ABPMP CBOK, Chapter 6 - Process Performance Management

NEW QUESTION # 93
