NEW QUESTION # 56

A Developer is developing an application that manages financial transactions. To improve security, multi-factor authentication (MFA) will be required as part of the login protocol.

What services can the Developer use to meet these requirements?

- **A. Amazon Cognito with MFA**
- B. AWS Directory Service
- C. AWS IAM with MFA enabled
- D. Amazon DynamoDB to store MFA session data, and Amazon SNS to send MFA codes

Answer: A

Explanation:

AWS documentation - Cognito MFA Managing Security

You can add multi-factor authentication (MFA) to a user pool to protect the identity of your users. MFA adds a second authentication method that doesn't rely solely on user name and password. You can choose to use SMS text messages, or time-based one-time (TOTP) passwords as second factors in signing in your users. You can also use adaptive authentication with its risk-based model to predict when you might need another authentication factor. It's part of the user pool advanced security features, which also include protections against compromised credentials.
