Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q25-Q30):

NEW QUESTION # 25

What is a feature of Cisco Meraki switches that simplifies the replacement process?

- A. Offline configuration backup
- B. Automatic hardware detection
- **C. Cloud-based management**
- D. Built-in configuration wizard

Answer: C

Explanation:

Cloud-based management is a core feature of Cisco Meraki switches and significantly simplifies the device replacement process.

When a failed switch is replaced:

- * The new hardware can be claimed in the Meraki dashboard.
- * The previously assigned configuration is automatically applied to the replacement device.
- * This eliminates the need for local reconfiguration and ensures continuity with minimal manual effort.

This centralized approach ensures that configurations are stored securely and consistently applied across devices.

NEW QUESTION # 26

What is the purpose of the pre-service checklist in the endpoint replacement process?

- A. To gather information about the replacement unit
- **B. To ensure all necessary tools and personnel are available**
- C. To test the functionality of the existing endpoint
- D. To verify the current configuration settings of the endpoint

Answer: B

Explanation:

Pre-service checklist is a procedural step followed before replacing an endpoint. Its primary purpose is to confirm that all resources, tools, documentation, and personnel are in place to execute the replacement efficiently and without delays. NEW QUESTION # 27

Drag and drop the safety actions that must be taken prior to beginning work into order on the right for working with electrical equipment.

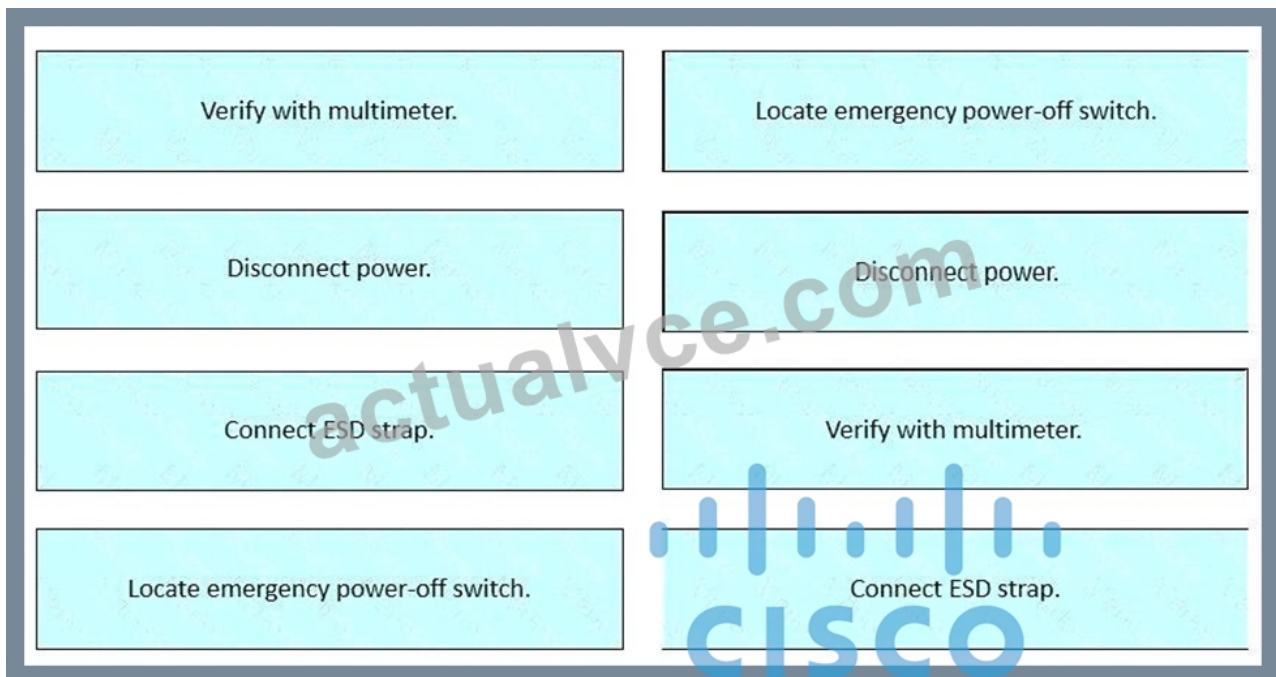

Verify with multimeter.	step 1
Disconnect power.	step 2
Connect ESD strap.	step 3
Locate emergency power-off switch.	step 4

Answer:

Explanation:

Verify with multimeter.	Locate emergency power-off switch.
Disconnect power.	Disconnect power.
Connect ESD strap.	Verify with multimeter.
Locate emergency power-off switch.	Connect ESD strap.

Explanation:

In the FLDTEC course, under Safety and ESD Procedures, Cisco outlines the following safety workflow before working on any network hardware:

- * Locate Emergency Power-Off Switch: Identifying how to cut power quickly is essential in case of an electrical fault or emergency.
- * Disconnect Power: Always ensure the power source is turned off and disconnected before handling any components.
- * Verify with Multimeter: Use a multimeter to confirm that no voltage is present before proceeding.
- * Connect ESD Strap: Once confirmed safe, attach your ESD strap to a grounded point to prevent electrostatic damage to sensitive components.

Following this process is critical not only for personal safety but also for equipment protection, especially during hardware installation, maintenance, or RMA replacements.

NEW QUESTION # 28

Which two components are accessed by removing the chassis cover on Cisco Catalyst 8000 Series Edge platforms? (Choose two.)

- A. DIMMs
- B. Fan trays
- C. Transceivers
- D. SSDs
- E. Network Interface Modules

Answer: A,D

Explanation:

On Cisco Catalyst 8000 Series Edge platforms, removing the chassis cover provides access to internal components such as DIMMs (Dual In-line Memory Modules) and SSDs (Solid-State Drives). These components are located internally and require the removal of the chassis cover for maintenance or replacement.

* DIMMs are used for system memory and are essential for the router's operation.

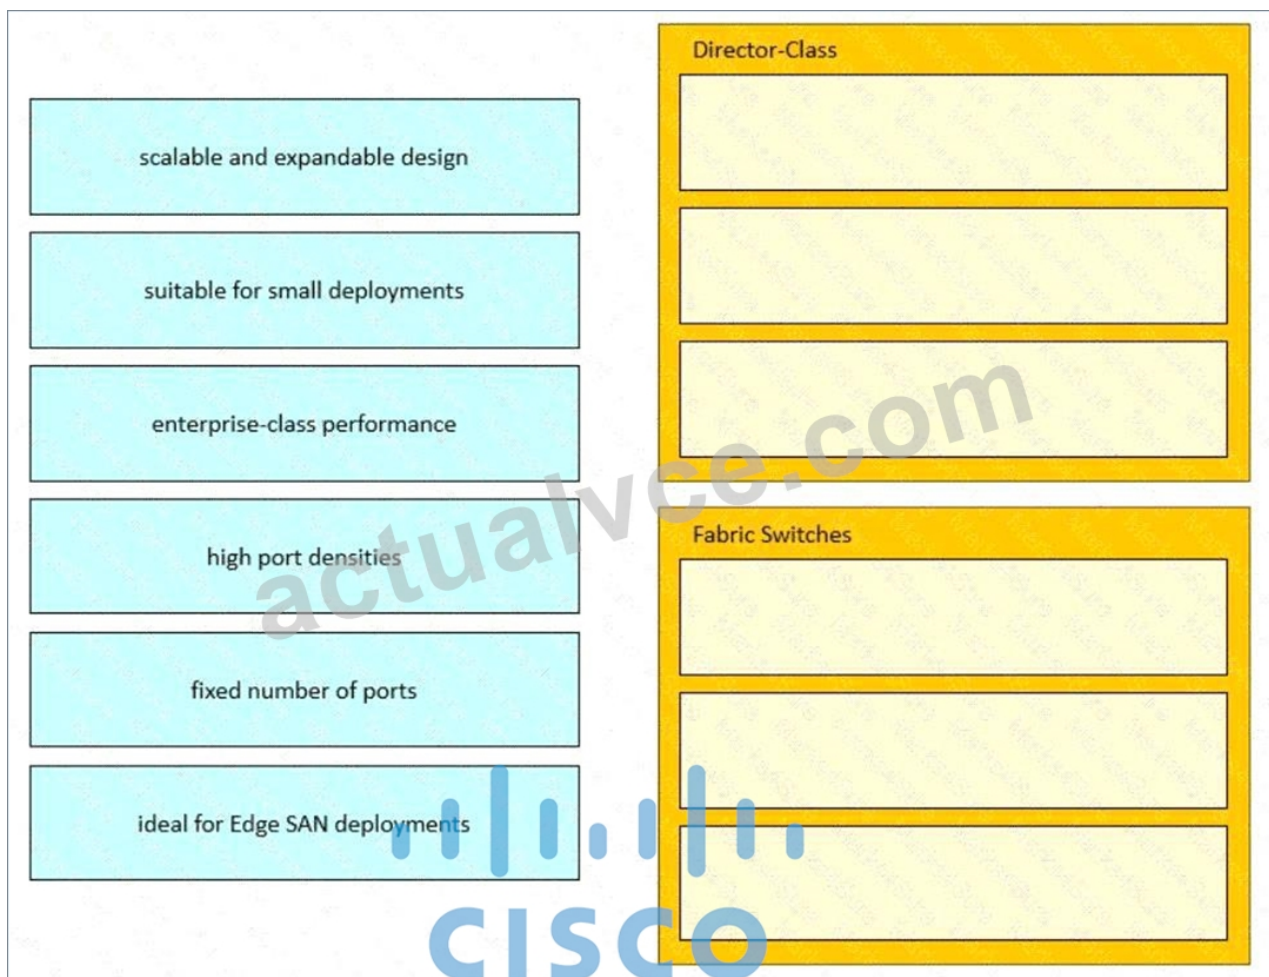

* SSDs provide storage for system software and configurations.

Other components like Network Interface Modules (NIMs) and transceivers are typically accessible externally and do not require chassis cover removal.

Director-Class Switches (e.g., Cisco MDS 9700 Series):

Modular and highly scalable

Support hot-swappable components (line cards, supervisors, fabric modules) High port density and performance for core SANs in enterprise data centers Fabric Switches (e.g., Cisco MDS 9148T):

Compact, fixed-form factor

Best suited for smaller SANs or edge locations

Cost-effective and simple to deploy

This distinction is important when selecting hardware for data center core vs access layers in SAN architectures.
