### Hot E-S4CPE-2405 Spot Questions - E-S4CPE-2405 Valid Real Exam

Believe in yourself, choosing the E-S4CPE-2405 study guide is the wisest decision. So far, the E-S4CPE-2405 practice materials have almost covered all the official test of useful E-S4CPE-2405 exam materials, before our products on the Internet, all the E-S4CPE-2405 study materials are subject to rigorous expert review, so you do not have to worry about quality problems of our latest E-S4CPE-2405 Exam Torrent, focus on the review pass the E-S4CPE-2405 qualification exam. I believe that through these careful preparation, you will be able to pass the exam.

### SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q42-Q47):

#### NEW QUESTION # 42

How do you move extensions between SAP S/4HANA Cloud Private Edition systems? Note: There are 2 correct answers to this question.

- A. Assign items to a software collection
- B. Assign items to a software package
- C. Mark items relevant for transport
- D. Import the collection

**Answer: A,D**

Explanation:

Moving extensions between SAP S/4HANA Cloud Private Edition systems (e.g., from development to quality or production) involves a managed transport process, especially under the Clean Core principle and RISE with SAP. For Private Edition, extensions can include in-app customizations or side-by-side developments. Let's evaluate the options:

\* A. Import the collection: This is correct. In SAP S/4HANA Cloud Private Edition, extensions (e.g., custom fields, logic) are transported using software collections. Once a collection is exported from the source system, it is imported into the target system (e.g., via the "Export Customizing Transports" and "Import Collection" apps in Fiori). This is a standard process for moving in-app extensions.

\* B. Mark items relevant for transport: This is incorrect. While marking items for transport is a concept in traditional ABAP systems (e.g., ECC), it's not the primary mechanism for SAP S/4HANA Cloud Private Edition. The cloud model uses collections rather than individual transport flags for in-app extensions.

\* C. Assign items to a software collection: This is also correct. In the extensibility process, key users or administrators assign extension items (e.g., custom fields, business objects) to a software collection using tools like the "Manage Software Collections" Fiori app. This collection is then exported and imported, enabling the movement of extensions between systems.

\* D. Assign items to a software package: This is incorrect. Software packages are used in traditional ABAP development (e.g., via Eclipse) for side-by-side extensions, not for in-app key-user extensions in SAP S/4HANA Cloud Private Edition. The cloud transport process relies on collections, not packages.

In summary, Import the collection and Assign items to a software collection are the steps to move extensions between SAP S/4HANA Cloud Private Edition systems.

#### NEW QUESTION # 43

You are preparing for an SAP S/4HANA Cloud Private Edition implementation project. What do you find in the Roadmap Viewer?

Note: There are 2 correct answers to this question.

- A. Solution process setup instructions
- B. Clean Core quality gates
- **C. Business process flows**
- **D. Tasks and deliverables to complete each phase**

**Answer: C,D**

Explanation:

The Roadmap Viewer is an SAP tool that provides detailed guidance for implementing SAP solutions, including SAP S/4HANA Cloud Private Edition, based on the SAP Activate Methodology. It supports project teams by offering phase-specific content. Let's evaluate the options:

\* A. Business process flows: This is correct. The Roadmap Viewer includes business process flows that illustrate how standard processes (e.g., order-to-cash, procure-to-pay) are executed in SAP S/4HANA.

These flows help teams understand and align their implementation with SAP best practices, a key feature for Private Edition projects.

\* B. Solution process setup instructions: This is incorrect. While the Roadmap Viewer provides high-level guidance, it does not include detailed, step-by-step setup instructions for configuring specific processes in the system. Such instructions are typically found in SAP Help Portal or configuration guides, not the Roadmap Viewer.

\* C. Tasks and deliverables to complete each phase: This is also correct. The Roadmap Viewer outlines tasks, activities, and deliverables for each phase of the SAP Activate Methodology (Discover, Prepare, Explore, Realize, Deploy, Run). For SAP S/4HANA Cloud Private Edition, it provides a structured plan to ensure all necessary steps are completed, making it an essential project management resource.

\* D. Clean Core quality gates: This is incorrect. The Clean Core principle (keeping the core SAP system standard and extensible) is part of SAP's strategy, and quality gates may be referenced in broader RISE with SAP documentation. However, the Roadmap Viewer does not specifically focus on Clean Core quality gates; it provides general implementation guidance rather than governance checkpoints.

In summary, the Roadmap Viewer contains A (business process flows) and C (tasks and deliverables to complete each phase) for an SAP S/4HANA Cloud Private Edition implementation.

#### NEW QUESTION # 44

What must you do in SAP Cloud ALM to assign a business process test to a specific tester? Note: There are 2 correct answers to this question.

- **A. Change the status to In Preparation**
- B. Change the status to In Testing
- **C. Assign the test case to a test plan**
- D. Assign the test plan to a test case

**Answer: A,C**

#### NEW QUESTION # 45

You have assigned a business role to an end user who has been granted access to only one app. The app does NOT show up on the user's launchpad and you are not available to support.

What can the user do?

- A. Assign a different business role that provides access.
- **B. Use the search function to find the app.**
- C. Assign a launchpad space to the business role.
- D. Create a page and assign it to the launchpad space.

**Answer: B**

### NEW QUESTION # 46

After integration requirements have been finalized, what is used to analyze, design, and document the integration strategy?

- A. SAP Business Accelerator Hub
- B. SAP Cloud ALM Requirements app
- C. Integration and API List
- **D. SAP Integration Solution Advisory Methodology**

**Answer: D**

Explanation:

After finalizing integration requirements, the SAP Integration Solution Advisory Methodology (ISA-M) is utilized to analyze, design, and document the integration strategy. ISA-M provides a structured approach to developing integration guidelines and best practices tailored to the organization's needs.

Option A: SAP Cloud ALM Requirements app

This option is incorrect. The Requirements app in SAP Cloud ALM is used for managing project requirements but does not specifically focus on integration strategy design.

Option B: Integration and API List

This option is incorrect. The Integration and API List provides information on available integrations and APIs but does not offer a methodology for designing integration strategies.

Option D: SAP Business Accelerator Hub

This option is incorrect. SAP Business Accelerator Hub is a repository for APIs and integration content but does not provide tools for analyzing or designing integration strategies.

In summary, the SAP Integration Solution Advisory Methodology is the appropriate framework for analyzing, designing, and documenting integration strategies after requirements have been finalized.

### NEW QUESTION # 47

.....

To maximize your chances of your success in the E-S4CPE-2405 Certification Exam, our company introduces you to an innovatively created exam testing tool-our E-S4CPE-2405 exam questions. Not only that you will find that our E-S4CPE-2405 study braindumps are full of the useful information in the real exam, but also you will find that they have the function to measure your level of exam preparation and cover up your deficiency before appearing in the actual exam.
