ESRI - Exploring GIS Maps Questions and Answers 2024/2025

basemap

- A map depicting locational reference information, such as landforms, roads, landmarks, and political boundaries.

feature

- A representation of a real-world object on a map.

GIS

- Geographic information system. GIS uses interactive maps to analyze data and help answer questions about the world.

layer

- A collection of related features in a GIS map. The features in a layer usually have the same theme, geometry, and set of attributes.

For example, a GIS layer might use lines (geometry) to represent streets (theme) and include the name of each street (attribute).

scale

- The ratio or relationship between a distance or area on a map and the corresponding distance or area on the ground. Scale is commonly expressed as a fraction or ratio.

Example: A scale of 1:1,000,000 means that 1 unit on the map equals 1 million units on the earth. In other words, 1 inch on the map shows 1 million inches on the earth (about 189 miles).

The FreeDumps is committed to making the entire EAEP2201 exam preparation journey simple, smart, and successful. To achieve this objective the FreeDumps is offering the top-rated and updated EAEP2201 exam practice test questions in three different formats. All these three FreeDumps EAEP2201 Exam Questions formats contain the real, valid, and error-free Enterprise Administration Professional 2201 (EAEP2201) exam practice test questions that are ideal study material for quick Esri EAEP2201 exam preparation.

Many exam candidates feel hampered by the shortage of effective EAEP2201 practice materials, and the thick books and similar materials causing burden for you. Serving as indispensable choices on your way of achieving success especially during this exam, more than 98 percent of candidates pass the exam with our EAEP2201 practice materials and all of former candidates made measurable advance and improvement. All EAEP2201 practice materials fall within the scope of this exam for your information. The content is written promptly and helpfully because we hired the most processional experts in this area to compile the Enterprise Administration Professional 2201 practice materials.

EAEP2201 Exam Registration, EAEP2201 New Learning Materials

In spite of the high-quality of our EAEP2201 study braindumps, our after-sales service can be the most attractive project in our

EAEP2201 guide questions. We have free online service which means that if you have any trouble using our EAEP2201 learning materials or operate different versions on the platform mistakenly, we can provide help for you remotely in the shortest time. And we know more on the EAEP2201 Exam Dumps, so we can give better suggestions according to your situlation.

Esri Enterprise Administration Professional 2201 Sample Questions (Q50-Q55):

NEW QUESTION # 50
A GIS administrator must configure ArcGIS Server so that onlyspecific groups and roles from the identity storecan administer it.
Which action should the administrator perform?

- A. Configure role-based access through the ArcGIS Server Manager
- B. Disable the primary administrator account
- C. Use a group-managed service account to administer the server
- D. Define the shared key used to generate an ArcGIS token

Answer: B

Explanation:
Theprimary site administrator accountin ArcGIS Server is abuilt-in accountthat bypasses external identity store configurations. To ensureonly users from a configured identity store(e.g., Active Directory) can administer the site, the primary site admin account must bedisabledafter alternative administrative access has been confirmed.
From ArcGIS Server documentation:
"After you configure your ArcGIS Server to use users and roles from an identity store (LDAP or Active Directory), you can disable the primary site administrator account to prevent bypassing the identity store."
* OptionBrelates to token security, not access control.
* OptionCis about running the service securely, not defining user permissions.
Reference:ArcGIS Enterprise -Managing Access Using Identity Stores and Disabling the Primary Site Administrator Account

NEW QUESTION # 51
A GIS administrator publishes a feature service that references user-managed data. The administrator wants users to add new features. Users should not make changes to attributes of existing features or delete features.
Which feature service operations should be set?

- A. Update and sync
- B. Extract and create
- C. Create and query

Answer: C

Explanation:
To allow users to add new features without the ability to modify or delete existing ones, the feature service should have the "Create" and "Query" operations enabled. The "Create" operation permits users to add new features, while the "Query" operation allows them to view existing features. By not enabling the "Update" and
"Delete" operations, users are restricted from making changes to or removing existing features. This configuration is ideal for workflows where data integrity is crucial, and only the addition of new data is permitted.
Enabling "Update and sync" (Option A) would allow users to modify existing features and synchronize changes, which is not desired in this scenario. "Extract and create" (Option C) is not a standard combination of operations for controlling editing permissions in feature services.
Reference Source:ArcGIS Server documentation on editor permissions for feature services

NEW QUESTION # 52
A GIS contractor is developing and testing an upcoming workflow for a client. The contractor is publishing fictional hydrant locations as a service to be consumed in a custom application. The contractor wants to consume as few resources as possible for the client's ArcGIS Server because they do not have a testing environment.
Which type of service should the contractor publish?

- A. Hosted feature service

- B. Non-hosted map service
- C. Non-hosted feature service
- D. Scene service

Answer: A

Explanation:
The contractor should publish ahosted feature service. Hosted feature services are managed entirely by the ArcGIS Data Store, not by the ArcGIS Server site directly. This means theyconsume fewer server resources since they are not managed by a dedicated ArcGIS Server site's memory or CPU at runtime the way traditional services are.
From ArcGIS documentation:
"Hosted feature layers (services) are stored in and powered by the ArcGIS Data Store, relieving ArcGIS Server from managing service processes. This is ideal for testing, lightweight apps, or non-production workflows when minimizing load on the GIS Server is desired."
* OptionB(Non-hosted map service) would require server-side management and ismore resource- intensive.
* OptionC(Scene service) is used for 3D visualization and isnot appropriate for 2D hydrant location data.
* OptionD(Non-hosted feature service) would also consume more ArcGIS Server resources.
Reference:ArcGIS Enterprise -Understanding hosted layers vs. services on GIS Server

NEW QUESTION # 53
A GIS analyst publishes a 3D scene from ArcGIS Pro to ArcGIS Enterprise to create a hosted 3D scene layer.
Which data store hosts the data for the 3D scene layer?

- A. Relational
- B. Raster
- C. Tile cache

Answer: C

Explanation:
Hosted 3D scene layers are stored in thetile cache data store, which is optimized for storing and serving cached 3D content, such as buildings and elevation surfaces. This data store supports scene layers published from ArcGIS Pro and allows for efficient rendering in 3D web scenes within the portal.
Therelational data storeis used for feature layers and structured tabular data. Theraster data storesupports large raster datasets for imagery layers. Neither is appropriate for 3D scene layer content. Thus, for hosted 3D scenes, the correct data store is thetile cache.
Reference Source:ArcGIS Enterprise Help - Data store types and publishing workflows

NEW QUESTION # 54
A GIS analyst is working withreferenced dataand needs to offload alarge dataset of millions of oil rig locationsfrom the geodatabase. The data must bequickly accessible for spatial visualizationandqueryable within ArcGIS Enterprise.
Which ArcGIS Data Store type should be configured?

- A. External big data file share
- B. Tile cache
- C. Relational
- D. Spatiotemporal

Answer: D

Explanation:
TheSpatiotemporal big data storeis designed formassive datasetsand optimized for high-speed visualization, time-enabled querying, and big data analytics. It is ideal for storingmillions of point features such as sensors or oil rig locations, especially when performance and scalability are critical.
From ArcGIS documentation:
"The spatiotemporal big data store is designed for writing and querying large volumes of spatial and temporal data. It's optimized for visualizing high-density datasets in web maps."
* OptionB(Relational) works for moderate data volumes but may not scale well.
* OptionCsupports cached tiles, not dynamic feature access.
