## ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q41-Q46):

### NEW QUESTION # 41

Based on the classification tree shown below, using the pairwise testing technique how many test cases are required to test all pairs?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

Nine test cases are required to test all pairs using the pairwise testing technique based on the classification tree. Pairwise testing is a technique that tests all possible pairs of inputs for a given scenario using a mathematical algorithm to reduce the number of combinations. The inputs for this scenario are:

- \* Power Unit: Petrol, Electric, Hybrid
- \* Body Style: Saloon, Hatchback, SUV
- \* Color: Red, Blue

The number of test cases is equal to the number of combinations generated by the algorithm that cover all pairs of inputs. Verified

#### NEW QUESTION # 42

An energy monitor in-home display device has been designed to interact with the home's lighting system and automatically dim bedroom lights when the daily energy budget has reached 90%. A defect has been found causing lights to dim at 80%. What type of testing would MOST likely have uncovered this defect?

SELECT ONE OPTION

- A. Accessibility testing
- **B. Functional appropriateness testing**
- C. Interoperability testing
- D. Adaptability testing

**Answer: B**

Explanation:

Comprehensive and Detailed in Depth Explanation:

- \* Functional appropriateness testing verifies whether a function is suitable for its intended purpose.
  - \* In this scenario, the dimming function should only activate at 90% usage, but it activates incorrectly at 80%.
  - \* This defect relates directly to whether the system behavior (dimming at 90%) is correctly implemented, which is checked during functional appropriateness testing.
  - \* Interoperability testing (A) verifies compatibility between systems or devices, not functional accuracy.
  - \* Accessibility testing (C) evaluates usability for people with disabilities.
  - \* Adaptability testing (D) checks whether the system works in different environments or configurations.
- Therefore, the correct answer is B (Functional appropriateness testing).

#### NEW QUESTION # 43

Which of the following statements about defect-based techniques is TRUE?

SELECT ONE OPTION

- A. The coverage criteria for black-box test techniques tend to be less systematic than for defect-based test techniques
- B. Defect-based techniques are mainly used by developers at the component test level
- C. In defect-based testing, the type of defect sought is used as the basis for test design
- D. Defect-based testing is a technique that identifies defects in requirements early in the lifecycle

**Answer: C**

Explanation:

Comprehensive and Detailed in Depth Explanation:

\* Defect-based techniques use the knowledge of defects that have occurred in the past to develop test cases that target similar types of issues.

\* Option C correctly states that defect-based testing focuses on using known defect types as the basis for designing tests.

\* Option A is incorrect because defect-based testing can be applied at various levels, not just the component level.

\* Option B is incorrect since defect-based techniques do not necessarily guarantee more systematic coverage than black-box techniques.

\* Option D is incorrect because defect-based testing focuses on detecting specific defect types rather than verifying requirements early.

Hence, the correct answer is C (In defect-based testing, the type of defect sought is used as the basis for test design).

#### NEW QUESTION # 44

Which of the following is a TYPICAL defect found in functional completeness testing?

SELECT ONE OPTION

- A. The system will not be able to meet the needs of users in a way that is acceptable to them
- B. The incorrect handling of data, data combinations or situations and displaying an appropriate message
- C. Screen design does not follow the internal company guidelines for field tabbing
- D. There is no facility to cancel multiple customer orders as detailed in the requirements/user story

**Answer: D**

Explanation:

Comprehensive and Detailed in Depth Explanation:

\* Functional completeness testing verifies that all required functionalities are present as specified.

\* A. Incorrect handling of data: This issue falls under functional correctness testing, not completeness.

\* B. Missing facility to cancel multiple customer orders: This is a missing functionality, directly related to functional completeness.

\* C. Screen design not following guidelines: This is related to usability or UI standards, not completeness.

\* D. Failing to meet user needs: This is an issue of functional appropriateness.

Therefore, the correct answer is B (There is no facility to cancel multiple customer orders as detailed in the requirements/user story).

#### NEW QUESTION # 45

Consider the following requirement:

The system shall allow cash advances of at least 200 Euros for all supported credit cards. The following credit cards are supported- American Express, Diners, VISA, Mastercard and Eurocard.

The requirement has been identified as business critical.

The following test conditions have been derived:

1. The system shall allow cash advances of at least 200 Euros
2. It shall support American Express, Diners, VISA, Mastercard and Eurocard.

Assume you are following a risk-based testing strategy, where likelihood and impact are both assessed on a five-point scale ranging from very low to very high. The requirement R1 was identified as a risk item during the quality risk analysis process. In total 20 risk items were identified during this process. Assume that technical project stakeholders have assessed the likelihood of the requirement R1 risk item at a medium level. Given only the information above, which of the following statements is true?

- A. The test cases associated with requirement R1 must be run towards the middle of the test execution period.
- B. A large number of test cases should be designed for requirement R1, based on impact
- C. The risk impact for requirement R1 should be categorized as high or very high
- D. The test cases associated with requirement R1 shall be run first in the test execution period

**Answer: C**
