High-quality 200-901 Latest Practice Materials & Leader in Qualification Exams & Complete Cisco DevNet Associate Exam

Our Cisco Certified DevNet Associate exam question is widely known throughout the education market. Almost all the candidates who are ready for the qualifying examination know our products. Even when they find that their classmates or colleagues are preparing a 200-901 exam, they will introduce our study materials to you. So, our learning materials help users to be assured of the 200-901 exam. Currently, my company has introduced a variety of learning materials, covering almost all the official certification of qualification exams, and each 200-901 practice dump in our online store before the listing, are subject to stringent quality checks within the company. Thus, users do not have to worry about such trivial issues as typesetting and proofreading, just focus on spending the most practice to use our Cisco Certified DevNet Associate test materials. After careful preparation, I believe you will be able to pass the exam.

Cisco DevNet Associate Exam Sample Questions (Q348-Q353):

NEW QUESTION # 348
What are two benefits of using VLANs? (Choose two.)

- A. extends the broadcast domain
- B. allows all network devices to be accessible from any host on the network
- C. enables the logical grouping of devices that belong to different Layer 2 devices
- D. segments the broadcast domain
- E. limits the devices that can join the network

Answer: C,D

Explanation:
VLANs (Virtual Local Area Networks) provide multiple benefits, including segmenting the broadcast domain, which reduces unnecessary traffic and improves network performance. They also enable the logical grouping of devices across different physical Layer 2 switches, enhancing network management and security by isolating traffic between different VLANs.

NEW QUESTION # 349
A developer starts to learn about building applications that use Cisco APIs. The developer needs access to Cisco security products in a development lab to test the first new Dlication that has been built. Which DevNet resource must be used?

- A. DevNet Code Exchange
- B. DevNet Automation Exchange
- C. DevNet Communities
- D. DevNet Sandbox

Answer: D

Explanation:
Cisco DevNet Sandbox provides developers with access to a variety of Cisco technologies in a lab environment. It is an essential resource for developers who want to test and build applications using Cisco APIs and products.
DevNet Sandbox: This platform offers pre-configured, ready-to-use environments that allow developers to experiment with Cisco products, including security products, without the need to set up and configure their own infrastructure.
Reference:
Cisco DevNet Sandbox

NEW QUESTION # 350
On which network plane is routing protocol traffic handled?

- A. data plane
- B. control plane
- C. authentication plane
- D. management plane

Answer: B

Explanation:
Explanation/Reference: https://tools.cisco.com/security/center/resources/understanding_cppr

NEW QUESTION # 351
Refer to the exhibit.

```
import requests

base url = f"https://webexapis.com/v1/people"

headers = {
        "Accept": "application/json"
}

person email = 'customer@company.com'
url = f"{base url}?email={person email}"

response = requests.request("GET", url, headers=headers)

if response.status code == 200 :
        print(f"OK - Added {person email}")
else:
        print(f"ERROR CODE {response.status code}")
```

A collaboration engineer has developed a script to automate the gathering of information by providing the email address of the individual. When the engineer tests the script, a 401 error is received. Which command fixes the script?

- A. Add "<Authorization>:<password>@" in the base_url after "https://".
- B. Add "Authorization": "Bearer <WEBEX_TOKEN>" to the headers
- C. Add "Authentication": "Basic <WEBEX_TOKEN>" in the base_url after "https://".
- D. Add "Authentication": "Bearer <WEBEX TOKEN>" to the headers

Answer: B

Explanation:
A 401 error indicates unauthorized access. To fix this, the script needs to include the appropriate authorization token in the request headers.
* Authorization Header: The Authorization header with a Bearer token is commonly used for OAuth 2.0 authorization.
* Bearer Token: This token is used to authenticate API requests securely.
Option A is correct as adding the Authorization header with the Bearer token is the proper way to authenticate the request and resolve the 401 error.
