

Free PDF 2025 Managing-Cloud-Security: WGU Managing Cloud Security (JY02) Accurate Certification Exam Infor

WGU D320 Managing Cloud Security Review (Latest Update) Qs & As| Grade A| 100% Correct (Verified Answers)

Q: National Institute of Standards and Technology is an agency of the Department of Commerce whose mission is to promote innovation and industrial competitiveness. It also creates numerous standard and requirements for the DoD, Federal Government, and government contractors relating to Cyber security.

Answer
NIST

Q: Risk Management Framework using a life cycle approach for security and privacy.

Answer
NIST SP 800-37

Q: provides security and privacy controls for information systems and organizations.

Answer
NIST SP 800-53

Q: Guide to Computer Security Log Management

Answer
NIST SP 800-92

Even if you spend a small amount of time to prepare for Managing-Cloud-Security certification, you can also pass the exam successfully with the help of Prep4cram WGU Managing-Cloud-Security braindump. Because Prep4cram exam dumps contain all questions you can encounter in the actual exam, all you need to do is to memorize these questions and answers which can help you 100% pass the exam. This is the royal road to Pass Managing-Cloud-Security Exam. Although you are busy working and you have not time to prepare for the exam, you want to get WGU Managing-Cloud-Security certificate. At the moment, you must not miss Prep4cram Managing-Cloud-Security certification training materials which are your unique choice.

Our Managing-Cloud-Security study materials selected the most professional team to ensure that the quality of the Managing-Cloud-Security learning guide is absolutely leading in the industry, and it has a perfect service system. The focus and seriousness of our study materials gives it a 99% pass rate. Using our products, you can get everything you want, including your most important pass rate. Managing-Cloud-Security Actual Exam is really a good helper on your dream road.

Managing-Cloud-Security Exam Simulator Free - Managing-Cloud-Security Reliable Test Camp

A good learning platform should not only have abundant learning resources, but the most intrinsic things are very important, and the most intuitive things to users are also indispensable. The Managing-Cloud-Security test material is professional editorial team, each test product layout and content of proofreading are conducted by experienced professionals who have many years of rich teaching experiences, so by the editor of fine typesetting and strict check, the latest Managing-Cloud-Security exam torrent is presented to each user's page is refreshing, but also ensures the accuracy of all kinds of learning materials is extremely high. Imagine, if you're using a Managing-Cloud-Security practice materials, always appear this or that grammar, spelling errors, such as this will not only greatly affect your mood, but also restricted your learning efficiency. Therefore, good typesetting is essential for a product, especially education products, and the Managing-Cloud-Security test material can avoid these risks very well.

WGU Managing Cloud Security (JY02) Sample Questions (Q71-Q76):

NEW QUESTION # 71

An organization is planning for an upcoming Payment Card Industry Data Security Standard (PCI DSS) audit and wants to ensure that only relevant files are included in the audit materials. Which process should the organization use to ensure that the relevant files are identified?

- A. Categorization
- B. Normalization
- C. Tokenization
- D. Anonymization

Answer: A

Explanation:

Categorization is the process of systematically identifying and classifying files according to content and relevance. In preparation for a PCI DSS audit, it is critical to identify which files fall within scope-those that contain cardholder data or impact its security.

Normalization adjusts data format, tokenization substitutes sensitive data with tokens, and anonymization removes identifiers. While useful, none directly address the task of isolating "relevant files" for audit.

Categorization ensures that files are grouped correctly, allowing auditors to focus on the proper scope and preventing unnecessary exposure of unrelated data.

This step aligns with PCI DSS requirements that limit scope to systems and data directly affecting cardholder data security. Proper categorization streamlines audits and demonstrates effective data governance.

NEW QUESTION # 72

Which security concept requires continuous identity and authorization checks to allow access to data?

- A. Traffic inspection
- B. Intrusion prevention
- C. Secret management
- D. Zero trust

Answer: D

Explanation:

The Zero Trust security model assumes that no user, device, or application should be trusted by default, whether inside or outside the network perimeter. Every access request must be continuously verified using strict identity, authorization, and context-based checks. Unlike traditional perimeter security, Zero Trust emphasizes the principle of "never trust, always verify." Traffic inspection looks at data packets, intrusion prevention identifies malicious activity, and secret management safeguards sensitive keys and credentials.

None of these approaches enforce constant, adaptive identity verification the way Zero Trust does.

By adopting Zero Trust, organizations ensure that access is not granted simply because a user is "inside" the network. Instead, continuous checks evaluate credentials, device posture, location, and other risk factors. This significantly reduces the risk of insider threats, credential theft, and lateral movement within cloud environments.

NEW QUESTION # 73

A customer service representative needs to verify a customer's private information, but the representative does not need to see all the information. Which technique should the service provider use to protect the privacy of the customer?

- A. Hashing
- B. Encryption

- C. Tokenization
- D. Masking

Answer: D

Explanation:

Data masking is a privacy-preserving technique that replaces sensitive fields with obfuscated or partial values while retaining usability. For example, displaying only the last four digits of a Social Security Number or credit card number. This allows a representative to verify identity without accessing the full data set.

Hashing and encryption protect data at rest or in transit, but they do not allow selective partial display.

Tokenization substitutes sensitive data with unique tokens but is typically used for storage and processing rather than interactive verification. Masking, on the other hand, is specifically designed for scenarios where a user must work with limited but recognizable data.

By using masking, organizations enforce the principle of least privilege, reduce exposure of sensitive information, and align with privacy standards such as PCI DSS and GDPR.

NEW QUESTION # 74

An organization is considering using vendor-specific application programming interfaces (APIs) and internal tools to set up a new service. However, the engineers are against this plan and are advocating for a new policy to prevent issues that could arise. Which common concern in cloud applications are the engineers concerned about?

- A. Availability
- B. Scalability
- C. Reliability
- D. Portability

Answer: D

Explanation:

The engineers are concerned about portability. Vendor-specific APIs and tools create a dependency on a single provider, leading to vendor lock-in. This limits the ability to migrate services or workloads to another provider without significant rework.

Reliability and availability refer to service uptime and continuity, while scalability addresses performance under demand. Although important, none of these directly relate to cross-platform flexibility. Portability ensures that services, data, and applications can be easily moved or integrated across environments.

By adopting portable solutions—such as open standards, containerization, and multi-cloud strategies—organizations reduce long-term risks, increase negotiation power with providers, and enhance resilience.

NEW QUESTION # 75

An organization consists of many divisions. Its leadership team has gathered the managers and key team members in each division to help create a disaster recovery plan. It studies the type of natural events that commonly occur and the risk involved for each location in which the organization has a data center. What is the leadership team doing in this scenario?

- A. Defining the disaster criteria
- B. Running a disaster declaration process
- C. Identifying the actions
- D. Performing an asset inventory

Answer: A

Explanation:

By analyzing natural events that could impact data centers and assessing the risks associated with each, the leadership team is defining the disaster criteria. This step determines what conditions or events qualify as disasters requiring activation of the recovery plan.

An asset inventory identifies systems, but here the focus is on external events. A disaster declaration process occurs during an actual event, and identifying actions comes later when response strategies are created.

Defining disaster criteria is essential to avoid ambiguity during crises. It establishes thresholds such as

"category 4 hurricanes," "regional power outages exceeding 12 hours," or "seismic events over a set magnitude." Clear criteria ensure consistent decision-making and timely activation of recovery procedures.

NEW QUESTION # 76

.....

In order to meet the requirements of our customers, Our Managing-Cloud-Security test questions carefully designed the automatic correcting system for customers. It is known to us that practicing the incorrect questions is very important for everyone, so our Managing-Cloud-Security exam question provide the automatic correcting system to help customers understand and correct the errors. If you are finding a study material in order to get away from your exam, you can spend little time to know about our Managing-Cloud-Security Test Torrent, it must suit for you.

Managing-Cloud-Security Exam Simulator Free: https://www.prep4cram.com/Managing-Cloud-Security_exam-questions.html

Managing-Cloud-Security study material has helped thousands of candidates successfully pass the exam and has been praised by all users since it was appearance, WGU Certification Managing-Cloud-Security Exam Infor Some people may ask how they can get the dumps, So there is no reason for you, a candidate of Managing-Cloud-Security Exam Simulator Free - WGU Managing Cloud Security (JY02) certification to miss Managing-Cloud-Security Exam Simulator Free exam torrent, WGU Certification Managing-Cloud-Security Exam Infor "Time is Money" is really true in today's world.

She has been featured in several books, including Managing-Cloud-Security InStyle Weddings, I Do, Just keep in mind that you'll need to manage these addresses, Managing-Cloud-Security Study Material has helped thousands of candidates Certification Managing-Cloud-Security Exam Infor successfully pass the exam and has been praised by all users since it was appearance.

WGU Managing-Cloud-Security Practice Exams In Online Format

Some people may ask how they can get the dumps, So there is no reason Managing-Cloud-Security High Passing Score for you, a candidate of WGU Managing Cloud Security (JY02) certification to miss Courses and Certificates exam torrent, "Time is Money" is really true in today's world.

After you purchasing our Managing-Cloud-Security certification training questions and dumps we will send you by email in a minute.
