## New NCLEX-RN Exam Guide | NCLEX-RN Reliable Braindumps Free

If you want to check the quality and validity of our NCLEX-RN exam questions, then you can click on the free demos on the website. The free demo has three versions. We only send you the PDF version of the NCLEX-RN study questions. We have shown the rest two versions on our website. All in all, you will have a comprehensive understanding of various NCLEX-RN practice materials. Then after deliberate considerations, you can directly purchase the most suitable one for yourself.

## NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q335-Q340):

### NEW QUESTION # 335

A client has been diagnosed with thrombophlebitis. She asks, "What is the most likely cause of thrombophlebitis during my pregnancy?" The nurse explains:

- A. An inadequate intake of folic acid during pregnancy
- B. An inadequate production of platelets
- C. An increase in fibrinolysis and a decrease in coagulation factors
- **D. Increased levels of the coagulation factors and a decrease in fibrinolysis**

**Answer: D**

Explanation:

(A) During pregnancy, the potential for thromboses increases owing to the increased levels of coagulation factors and a decrease in the breakdown of fibrin. (B) An inadequate production of platelets would result in thrombocytopenia with resulting signs and symptoms of bleeding such as petechiae, hematuria, or hematemesis. (C) A deficiency of folic acid during pregnancy produces a megaloblastic anemia. It is usually found in combination with iron deficiency. (D) This combination would result in bleeding disorders because more fibrin would be broken down and fewer clotting factors would be available.

### NEW QUESTION # 336

As the nurse assesses a male adolescent with chlamydia, the nurse determines that a sign of chlamydia is:

- A. Hepatomegaly
- **B. Epididymitis**
- C. Enlarged penis
- D. Secondary lymphadenitis

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

(A) An enlarged penis is not a sign of chlamydia. (B) Secondary lymphadenitis is a complication of lymphogranuloma venereum. (C) Untreated chlamydial infection can spread from the urethra, causing epididymitis, which presents as a tender, scrotal swelling. (D) Hepatomegaly is not a complication.

### NEW QUESTION # 337

The primary reason for sending a burn client home with a pressure garment, such as a Jobst garment, is that the garment:

- A. Increases venous return and cardiac output by normalizing fluid status
- B. Covers burn scars and decreases the psychological impact during recovery
- **C. Decreases hypertrophic scar formation**
- D. Assists with ambulation

**Answer: C**

Explanation:

Explanation

(A) Tubular support, such as that received with a Jobst garment, applies tension of 10-20 mm Hg. This amount of uniform pressure is necessary to prevent or reduce hypertrophic scarring. Clients typically wear a pressure garment for 6-12 months during the recovery phase of their care. (B) Pressure garments have no ambulatory assistive properties. (C) Pressure garments can worsen the psychological impact of burn injury, especially if worn on the face. (D) Pressure garments do not normalize fluid status.

### NEW QUESTION # 338

A 49-year-old obese woman has been admitted to the general surgery unit with choledocholithiasis. As the nurse is admitting her to

the unit, she states, "The doctor said I have stones that need to be removed; where are they?" The nurse knows that the best explanation for this is to tell her that:

- A. There are stones present in her kidneys
- B. There are stones present in her gallbladder
- C. There are no stones, but her gallbladder is irritated and caused her nausea, vomiting, and pain
- **D. There are stones present in her common bile duct**

**Answer: D**

Explanation:

Section: Questions Set D

Explanation:

(A) Cholelithiasis is the correct term used to describe the presence of stones in the gallbladder. (B) Nephrolithiasis, or renal calculi, is the correct term used to describe the presence of stones in the kidney. (C) Choledocholithiasis is the correct term used to describe the presence of stones in the common bile duct. (D) Cholecystitis is the correct term used to describe inflammation of the gallbladder and can be associated with cystic duct obstructions from impacted stones.

### NEW QUESTION # 339

A male client is started on IV anticoagulant therapy with heparin. Which of the following laboratory studies will be ordered to monitor the therapeutic effects of heparin?

- A. Hemoglobin
- **B. Partial thromboplastin time**
- C. Prothrombin time
- D. Red blood cell (RBC) count

**Answer: B**

Explanation:

Explanation

(A) Partial thromboplastin time is used to monitor the effects of heparin, and dosage is adjusted depending on test results. It is a screening test used to detect deficiencies in all plasma clotting factors except factors VII and XIII and platelets. (B) Hemoglobin is the main component of RBCs. Its main function is to carry O<sub>2</sub> from the lungs to the body tissues and to transport CO<sub>2</sub> back to the lungs. (C) RBC count is the determination of the number of RBCs found in each cubic millimeter of whole blood. (D) PT is used to monitor the effects of oral anticoagulants, e.g., coumarin-type anticoagulants.

### NEW QUESTION # 340

.....

To help you get the NCLEX exam certification, we provide you with the best valid NCLEX-RN pdf prep material. The customizable and intelligence NCLEX-RN test engine will bring you to a high efficiency study way. The NCLEX-RN test engine contains self-assessment features like marks, progress charts, etc. Besides, the Easy-to-use NCLEX-RN layout will facilitate your preparation for NCLEX-RN real test. You can pass your NCLEX-RN certification without too much pressure.
