NEW QUESTION # 29

You are working on a migration initiative as part of a cloud transformation project and leveraging Oracle Cloud Migrations service. Which is a valid use case for Oracle Cloud Migrations service?

- A. Migrate Compute instances between different OCI Regions
- B. Migrate Virtual Machines from an on-premises environment to Oracle Cloud VMware Solution (OCVS)
- **C. Migrate Virtual Machines from an on-premises environment to OCI Compute instances**
- D. Migrate Virtual Machines from an on-premises environment to containers in Oracle Container Engine for Kubernetes (OKE)

Answer: C

Explanation:

Migrating Virtual Machines from an on-premises environment to OCI Compute instances is a valid use case for Oracle Cloud Migrations service. This service allows for the seamless migration of Virtual Machines to Oracle Cloud Infrastructure Compute instances, enabling organizations to leverage the benefits of cloud infrastructure.

NEW QUESTION # 30

Your company is looking to migrate its IT infrastructure into Oracle Cloud VMware Solution (OCVS). The source infrastructure includes a variety of workloads, such as a few business-critical VMs that require continuous availability, and a large set of non-critical dev-test VMs. As a migration cloud architect, you are exploring Hybrid Cloud Extension (HCX) migration methods to identify the best approaches for each type of workload. Which HCX migration method would be the most appropriate to use in order to migrate both business-critical VMs and dev-test VMs?

- A. Cold Migration for migrating both business-critical and non-critical dev-test VMs
- B. HCX Bulk Migration for migrating the business-critical VMs, and Cold Migrations for non-critical dev-test VMs
- **C. HCX vMotion for migrating business-critical VMs, and Cold Migrations for non-critical dev-test VMs**
- D. HCX Bulk Migration for migrating business-critical VMs and HCX vMotion for non-critical dev-test VMs

Answer: C

Explanation:

HCX vMotion is the most appropriate method for migrating business-critical VMs as it allows live migration without downtime, ensuring continuous availability. Cold Migrations can be used for non-critical dev-test VMs since downtime is acceptable for these workloads.

NEW QUESTION # 31

As an application developer deploying containerized applications, in which scenario would you most likely choose Oracle Cloud Infrastructure Container Engine for Kubernetes (OKE) over Oracle Cloud Infrastructure Registry (OCIR)?

- **A. When there is a need for a managed container orchestration service for automatic scaling, upgrades, and security patching**
- B. When a private container registry is required for internal use, and the need to store, share, and manage container images is prioritized

- C. When there is a need for a platform with serverless capabilities to efficiently run containerized workloads
- D. When there is a need to store, share, and manage container images with a highly available and scalable architecture

Answer: A

Explanation:

Oracle Cloud Infrastructure Container Engine for Kubernetes (OKE) is a managed container orchestration service that provides automatic scaling, upgrades, and security patching for containerized applications. It is ideal for scenarios where there is a need for a fully managed Kubernetes environment to deploy and manage containerized workloads.

NEW QUESTION # 32

Your company is planning to decommission their on-premises data center hosting a set of Virtual Machines (VMs) that heavily rely on VMware technologies. The goal is to migrate those VMs into OCI, make this transition as quick as possible, ensuring the environment is highly available and can be controlled by the company after the migration. What are the two advantages of using Oracle Cloud VMware Solution (OCVS)?

- A. The company can control root access to the OCVS environment
- B. The company could convert all of VMware-based applications into native OCI Compute instances
- C. The company can bring their own product licenses (BYOL) for VMware products such as vSphere, vSAN, and NSX
- D. The company can move those application VMs into OCVS "as-is"
- E. The company can free up their IT team as Oracle takes over the management, including updates and patching of the OCVS environment

Answer: C,D

Explanation:

Two key advantages of using OCVS are the ability to bring your own licenses (BYOL) for VMware products, and the ability to move application VMs "as-is," minimizing the need for modifications.
