

Free PDF 2025 Oracle Marvelous 1Z0-1151-25: Reliable Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Test Question

P.S. Free & New 1Z0-1151-25 dumps are available on Google Drive shared by Test4Engine: <https://drive.google.com/open?id=1k1YTIBIpiHuXR15ogRaMQKI-v7f6s3Gc>

The effect of the user using the latest 1Z0-1151-25 exam torrent is the only standard for proving the effectiveness and usefulness of our products. I believe that users have a certain understanding of the advantages of our 1Z0-1151-25 study guide, but now I want to show you the best of our 1Z0-1151-25 Training Materials - Amazing pass rate. Based on the statistics, prepare the exams under the guidance of our 1Z0-1151-25 practice materials, the user's pass rate is up to 98% to 100%, And they only need to practice latest 1Z0-1151-25 exam torrent to hours.

Oracle 1Z0-1151-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Implement Oracle Database@Azure: This section tests the expertise of Database Solutions Architects in deploying and managing Oracle Database@Azure. It covers the architectural components and onboarding processes required for provisioning databases in Azure while maintaining Oracle's advanced database capabilities. Candidates will also focus on configuring high availability and disaster recovery strategies to ensure business continuity and data resilience in a multi-cloud setup.
Topic 2	<ul style="list-style-type: none">Configure Multicloud Connection Options: This section assesses the abilities of Network Engineers in configuring connectivity solutions for OCI multi-cloud environments. It includes setting up secure networking options such as Site-to-Site VPN and FastConnect for seamless cloud integration. Candidates will also learn how to implement Oracle Interconnect services for establishing direct, high-performance connections between OCI and third-party cloud providers like Microsoft Azure and Google Cloud.
Topic 3	<ul style="list-style-type: none">Introduction to Multicloud: This section of the exam measures the skills of Cloud Architects in understanding multicloud environments and their benefits. It covers the reasons organizations adopt multi-cloud strategies, including flexibility, cost optimization, and risk management. Candidates will learn about common multicloud use cases and how they are implemented in Oracle Cloud Infrastructure (OCI) to enhance interoperability and performance.

Topic 4	<ul style="list-style-type: none"> • Implement Oracle Database@Google Cloud: This section measures the proficiency of Cloud Database Engineers in utilizing Oracle Database@Google Cloud. It explores the architecture and operational framework for running Oracle databases on Google Cloud. Candidates will learn about onboarding procedures, provisioning resources, and managing database services effectively to optimize performance and availability in a Google Cloud-integrated multi-cloud ecosystem.
Topic 5	<ul style="list-style-type: none"> • Core OCI Services Overview: This section evaluates the knowledge of Identity and Database Administrators in managing OCI's core services for multi-cloud integration. It covers the implementation of identity federation between OCI Identity Domains and external identity providers, ensuring secure authentication across multiple cloud environments. Candidates will also gain expertise in configuring Virtual Cloud Network (VCN) components and administering OCI database services, including Base Databases, Autonomous Databases, and HeatWave, to support scalable multi-cloud deployments.

Quiz Oracle - 1Z0-1151-25 - Latest Reliable Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Test Question

The PDF version of the Test4Engine Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) prep material is easily accessible. This format is ideal for someone who is constantly on the move, as you can prepare for your Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) exam whether you are using your smartphone, tablet, or laptop. You can study anywhere, at any time, without having to worry about installing anything. Furthermore, you can study with a hard copy by printing all of your Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) PDF questions. We offer regular updates in PDF format to improve Oracle Cloud Infrastructure 2025 Multicloud Architect Professional (1Z0-1151-25) questions according to changes in the exam.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q54-Q59):

NEW QUESTION # 54

An e-commerce company experiences periodic surges in traffic during seasonal sales events. Their core application is hosted on OCI, while their AI-powered recommendation engine runs on Google Cloud. To handle these traffic surges efficiently, the company requires: * A quick way to scale bandwidth between OCI and Google Cloud * Minimal disruption to existing configurations when making adjustments. What is the most appropriate configuration to address the company's requirements during traffic surges?

- **A. Upgrade the existing bandwidth during traffic surges and downgrade it once the surge ends.**
- B. Use public internet with increased capacity during surges.
- C. Deploy a VPN connection to handle additional traffic.
- D. Use Oracle Interconnect for Google Cloud to provision an additional virtual circuit and configure it for Equal-Cost Multi-Path Routing (ECMP).

Answer: A

Explanation:

Upgrading the existing Oracle Interconnect for Google Cloud bandwidth during surges and downgrading afterward meets the need for scalability and minimal disruption. This leverages the existing FastConnect and Partner Interconnect setup, avoiding new configurations like additional virtual circuits with ECMP (Option A), which adds complexity. VPN (Option C) and public internet (Option D) lack the performance and reliability of the interconnect. Oracle's documentation supports dynamic bandwidth adjustments for such scenarios.

NEW QUESTION # 55

Which is not a driver for using multiple clouds?

- **A. Content Delivery Network**
- B. Cost Optimization
- C. Redundancy/Disaster Recovery

- D. Best of Breed Cloud Services

Answer: A

Explanation:

Drivers for adopting multicloud architectures typically include redundancy/disaster recovery (ensuring availability across providers), best-of-breed cloud services (leveraging specialized offerings), and cost optimization (balancing expenses across clouds). A Content Delivery Network (CDN) is a specific service for distributing content globally, often provided by cloud vendors, but it is not a strategic driver for adopting a multicloud approach. CDNs can be used within a single cloud or multicloud setup, but they don't inherently motivate the decision to use multiple clouds. Oracle's multicloud strategy documentation highlights the other three as primary motivations.

NEW QUESTION # 56

What is the role of BGP dynamic routing in the connection between an Azure VNet and OCI VCN for ABC Private Limited?

- A. It is used to manage the security rules for the VNet and VCN.
- **B. It is used to automatically select the best route between the VNet and VCN.**
- C. It is used to create a static routing configuration for the VNet and VCN.
- D. It is used to establish a direct connection between the VNet and VCN without a virtual circuit.

Answer: B

Explanation:

Border Gateway Protocol (BGP) is a dynamic routing protocol used to exchange routing information between autonomous systems (AS). In the context of the Azure-OCI interconnect, BGP plays a crucial role in enabling dynamic routing between the Azure VNet and the OCI VCN.

Here's why:

Dynamic Route Exchange: BGP enables the exchange of network reachability information (i.e., which IP address prefixes are reachable through which paths) between the Azure and OCI networks. This allows each network to learn about the other's subnets and automatically determine the best path for traffic to take.

Automatic Path Selection: BGP automatically selects the best path based on various attributes, such as path length, AS path, and local preference. This ensures that traffic is routed efficiently between the two cloud environments.

Resiliency and Failover: If a link or path fails, BGP automatically reconverges and selects an alternate path, ensuring continuous connectivity.

Why the other options are incorrect:

- A). It is used to create a static routing configuration for the VNet and VCN: Static routing requires manual configuration of routes, which is not suitable for dynamic cloud environments. BGP provides dynamic routing, eliminating the need for manual intervention.
- C). It is used to establish a direct connection between the VNet and VCN without a virtual circuit: The connection between the VNet and VCN relies on virtual circuits (ExpressRoute on Azure and FastConnect on OCI). BGP is used over these virtual circuits to exchange routing information.
- D). It is used to manage the security rules for the VNet and VCN: Security rules (like Network Security Groups in Azure and Security Lists in OCI) are managed separately and are not the responsibility of BGP. BGP focuses on routing traffic, not enforcing security policies.

NEW QUESTION # 57

In the context of Oracle Database@Google Cloud, what is the role of the OCI Dynamic Routing Gateway (DRG)?

- A. It acts as a firewall controlling traffic between the Exadata systems and Google Cloud VPCs.
- B. It manages the physical cross-connect between the Oracle and Google Cloud networks.
- **C. It facilitates BGP routing between the OCI FastConnect and the Google Cloud Router for dynamic route exchange.**
- D. It provides Network Address Translation (NAT) for the Exadata systems.

Answer: C

Explanation:

The OCI Dynamic Routing Gateway (DRG) is a virtual router that provides a single point of entry for network traffic into and out of the OCI Virtual Cloud Network (VCN). In the context of Oracle Database@Google Cloud, the DRG plays a crucial role in enabling connectivity between the Exadata systems (within OCI) and the Google Cloud VPCs. It does this by: Connecting to the Oracle FastConnect circuit.

Establishing BGP (Border Gateway Protocol) peering with the Google Cloud Router.

BGP is a dynamic routing protocol that allows the two networks (OCI and Google Cloud) to exchange routing information automatically. This ensures that traffic is routed efficiently between the two environments.

The other options are incorrect:

While security is important, the DRG's primary function in this context is routing, not acting as a firewall. Security is typically handled by security lists and network security groups.

NAT is not the DRG's primary role in this scenario.

The DRG manages the virtual routing, not the physical cross-connect.

The physical connection is handled by the underlying infrastructure of FastConnect and Partner Interconnect.

NEW QUESTION # 58

A company XYZ has been using Oracle Cloud Infrastructure to host their mission-critical applications, but they have decided to start using Azure for some of their workloads. They want to enable connectivity between their Oracle Cloud Infrastructure and Microsoft Azure to create a multicloud architecture.

- A. Use public Internet to connect the two clouds.
- B. None of the above.
- **C. Use OCI-Azure Interconnect to establish a private, high-bandwidth, low-latency connection between the two clouds.**
- D. Use a VPN connection to connect the two clouds.

Answer: C

Explanation:

The OCI-Azure Interconnect is the official Oracle-Microsoft partnership solution for establishing a private, high-bandwidth, and low-latency connection between OCI and Azure. This interconnect leverages Azure ExpressRoute and Oracle FastConnect to create a dedicated network link, bypassing the public internet for enhanced security and performance. A VPN connection (Option A) is possible but less optimal due to higher latency and lower reliability compared to the interconnect. Using the public internet (Option B) is insecure and unsuitable for mission-critical applications. This solution is detailed in Oracle's multicloud architecture guides and the OCI-Azure partnership documentation, emphasizing its suitability for enterprise multicloud deployments.

NEW QUESTION # 59

.....

Our company is trying to satisfy every customer's demand. Of course, we also attach great importance on the quality of our 1Z0-1151-25 real exam. Every product will undergo a strict inspection process. In addition, there will have random check among different kinds of 1Z0-1151-25 Study Materials. The quality of our 1Z0-1151-25 practice dumps deserves your trust.our products have built good reputation in the market. We sincerely hope that you can try our 1Z0-1151-25 preparation guide.
