And the Software version can simulate the real exam environment and support offline practice. Besides, the APP online can be applied to all kind of electronic devices.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q37-Q42):

NEW QUESTION # 37

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? Note: There are 3 correct answers to this question.

- A. Discard any other packages that appear in My Action Items.
- B. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- C. Make sure you update the string resource files in the production site before migrating the corresponding field configurations from test to production site.
- D. Publish the form template within the test site in order to add the form fields in the package.
- E. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.

Answer: B,C,E

NEW QUESTION # 38

Which of the following classes are NOT frequently customized in SAP Ariba Strategic Sourcing solutions?

- A. AbstractDocument
- B. ExtendedAddressRep
- C. SourcingProject
- D. ContractWorkspace

Answer: B

NEW QUESTION # 39

While working on editing a field for a customer, you notice that "Editable in full Contract Amendment" is not an option available in the advanced tab of field configuration. What is likely the cause for this behavior?
(Select 2 correct answers)

- A. The contract must be in an amendment state for this option to be visible in customizing.
- B. The field you are customizing is standard and therefore cannot be changed.
- C. The field you are customizing is not in the contract workspace or request classes.
- D. A customization is in flight and needs to be cleared and reset prior to making this change.

Answer: A,C

Explanation:

The "Editable in full Contract Amendment" option in SAP Ariba is available only when the contract is in an amendment status, meaning this option appears contextually when the contract supports amendment workflows. If the contract is not in amendment state, the option remains hidden (A).

Additionally, this option is only relevant for fields that belong to the Contract Workspace or Request field classes; fields outside these classes will not show amendment-specific editability options (C).

The presence or absence of this option is not related to ongoing customizations needing reset (B), nor is it restricted solely to custom or standard fields (D), as standard fields can also have this option if class- applicable.

NEW QUESTION # 40

Which read-only files show the key and English translations for custom field labels and help tips?

- A. The customer Resource files that can be exported through AML & Translations Upload
- B. The JSON files that can be exported through AML & Translations Upload
- C. The JSON files that can be exported through ICM
- D. The customerResource files that can be exported through ICM

Answer: A

NEW QUESTION # 41

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field changes value, your custom field does not change. What scenarios could cause this? (Select 3 correct answers)

- A. Your dependent field does not have the property Refresh screen on value change enabled
- B. The parameter Application.Base.RecomputeValueOnFieldChange is not enabled
- C. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- D. Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field
- E. The defaulting Expression sets a value that violates the custom field Validity Condition

Answer: A,B,D

Explanation:

* B: If the dependent field isn't configured to refresh the UI when its value changes (no "Refresh screen on value change" enabled), the defaulting logic won't retrigger.

* C: The global parameter Application.Base.RecomputeValueOnFieldChange must be enabled so that dependent default expressions recalculate on field changes; otherwise, they won't update automatically.

* E: The "Respect User Value" property, when enabled, means that if a user manually overrides the default, the system will not recalculate or overwrite the field even if dependencies change. Lock Initial Value (A) prevents edits after first default but doesn't affect recomputation, and violating validity (D) would trigger an error, not silently block updates.

NEW QUESTION # 42

.....

Don't underestimate the difficulty level of the SAP C_ACDET_2506 certification exam because it is not easy to clear. You need to prepare real C_ACDET_2506 exam questions to get success.
