

Free PDF 2025 SAP High Hit-Rate C_BW4H_2505: Regualer SAP Certified Associate - Data Engineer - SAP BW/4HANA Update

SAP CERTIFICATION

Our clients can have our C_BW4H_2505 exam questions quickly. The clients only need to choose the version of the product, fill in the correct mails and pay for our C_BW4H_2505 useful test guide. Then they will receive our mails in 5-10 minutes. Once the clients click on the links they can use our C_BW4H_2505 Study Materials immediately. If the clients can't receive the mails they can contact our online customer service and they will help them solve the problem successfully. The purchase procedures are simple and the delivery of our C_BW4H_2505 study tool is fast.

As the authoritative provider of C_BW4H_2505 learning materials, we can guarantee a high pass rate compared with peers, which is also proved by practice. Our good reputation is your motivation to choose our learning materials. We guarantee that if you under the guidance of our C_BW4H_2505 learning materials step by step you will pass the exam without a doubt and get a certificate. Our learning materials are carefully compiled over many years of practical effort and are adaptable to the needs of the exam. We firmly believe that you cannot be an exception. Choosing our C_BW4H_2505 Study Material actually means that you will have more opportunities to be promoted in the near future.

Free PDF 2025 SAP Pass-Sure Regualer C_BW4H_2505 Update

The SAP Certified Associate - Data Engineer - SAP BW/4HANA (C_BW4H_2505) exam questions are the real, valid, and updated C_BW4H_2505 Exam Questions that are specifically designed for quick and complete C_BW4H_2505 exam preparation. With ActualTestsIT SAP Certified Associate - Data Engineer - SAP BW/4HANA (C_BW4H_2505) practice test questions you can start SAP C_BW4H_2505 exam preparation immediately.

SAP C_BW4H_2505 Exam Syllabus Topics:

Topic	Details

Topic 1	• SAP BW • 4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW • 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.
Topic 2	• Data Acquisition into SAP BW • 4HANA: This section tests how Data Engineers manage data integration into SAP BW • 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.
Topic 3	• Fundamentals: This section of the exam measures the foundational understanding of SAP Consultants and covers essential terms and concepts related to SAP BW • 4HANA and SAP Business Data Cloud. It focuses on the core framework and architecture necessary to navigate and work with these platforms.
Topic 4	• SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.
Topic 5	• Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q79-Q84):

NEW QUESTION # 79

In a BW query with cells, you need to overwrite the initial definition of a cell. Which cell types can you use?

Note: There are 2 correct answers to this question.

- A. Reference cell
- B. Help cell
- C. Selection cell
- D. Formula cell

Answer: C,D

NEW QUESTION # 80

Which entity can be used as a source of an Analytic Model?

- A. Remote tables of semantic type Text
- B. Tables of semantic type Hierarchy
- C. Views of semantic type Fact
- D. Business entities of semantic type Dimension

Answer: C

Explanation:

An Analytic Model in SAP Data Fabric or SAP BW/4HANA is designed to analyze data by combining facts (measures) and dimensions (attributes). To create an Analytic Model, you need a source entity that represents the fact data. Below is a detailed explanation of why the correct answer is B:

* Incorrect: Business entities of semantic type Dimension represent descriptive attributes (e.g., customer name, product category) rather than measurable data. While dimensions are essential for enriching fact data, they cannot serve as the primary source of an Analytic Model.

Option A: Business entities of semantic type Dimension

* Correct: Views of semantic type Fact contain measurable data (e.g., sales revenue, quantity sold) and are the primary source for an

Analytic Model. These views provide the numerical data required for analysis and reporting.

Option B: Views of semantic type Fact

* Incorrect: Tables of semantic type Hierarchy define hierarchical relationships (e.g., organizational structures or product hierarchies). While hierarchies are useful for organizing and navigating data, they do not contain measurable data and cannot serve as the source of an Analytic Model.

Option C: Tables of semantic type Text

* Incorrect: Remote tables of semantic type Text store textual descriptions (e.g., product names, region names). These tables are used to enhance dimensions but do not contain measurable data and are not suitable as the source of an Analytic Model.

Option D: Remote tables of semantic type Text

* SAP Data Fabric Documentation: Explains the role of semantic types in defining the purpose of entities (e.g., Fact, Dimension, Hierarchy, Text).

* SAP BW/4HANA Modeling Guide: Describes how Analytic Models are built using fact data as the primary source and dimensions for contextual enrichment.

* SAP Analytics Cloud Integration: Highlights the importance of fact views in enabling advanced analytics and reporting.

References to SAP Data Engineer - Data Fabric Concepts By understanding the semantic types and their roles, you can effectively design Analytic Models that meet business requirements for data analysis and reporting.

NEW QUESTION # 81

Which are use cases for sharing an object? Note: There are 3 correct answers to this question.

- A. Time tables are defined in a central space should be used in many other spaces.
- B. A source connection needs to be used in different replication flows.
- C. A product dimension view should be used in different fact models for different business segments.
- D. Use remote tables located in the SAP BW bridge space across SAP DataSphere core spaces.
- E. A BW time characteristic should be used across multiple DataStore objects (advanced).

Answer: A,C,E

Explanation:

Sharing objects is a common requirement in SAP Data Fabric and SAP BW/4HANA environments to ensure reusability, consistency, and efficiency. Below is a detailed explanation of why the correct answers are A, B, and D:

* Correct: Sharing a product dimension view across multiple fact models is a typical use case in data modeling. By reusing the same dimension view, you ensure consistency in how product-related attributes (e.g., product name, category, or hierarchy) are represented across different business segments. This approach avoids redundancy and ensures uniformity in reporting and analytics.

Option A: A product dimension view should be used in different fact models for different business segments

* Correct: Time characteristics, such as fiscal year, calendar year, or week, are often reused across multiple DataStore objects (DSOs) in SAP BW/4HANA. Sharing a single time characteristic ensures that all DSOs use the same time-related definitions, which is critical for accurate time-based analysis and reporting.

Option B: A BW time characteristic should be used across multiple DataStore objects (advanced)

* Incorrect: While source connections can technically be reused in different replication flows, this is not considered a primary use case for "sharing an object" in the context of SAP Data Fabric. Source connections are typically managed at the system level rather than being shared as reusable objects within the data model.

Option C: A source connection needs to be used in different replication flows

* Correct: Centralized time tables are often created in a shared or central space to ensure consistency across different spaces or workspaces in SAP DataSphere. By sharing these tables, you avoid duplicating time-related data and ensure that all dependent models use the same time definitions.

Option D: Time tables are defined in a central space should be used in many other spaces

* Incorrect: While remote tables in the SAP BW bridge space can be accessed across SAP DataSphere core spaces, this is more about cross-space access rather than "sharing an object" in the traditional sense. The focus here is on connectivity rather than reusability.

Option E: Use remote tables located in the SAP BW bridge space across SAP DataSphere core spaces

* SAP DataSphere Documentation: Highlights the importance of centralizing and sharing objects like dimensions and time tables to ensure consistency across spaces.

* SAP BW/4HANA Modeling Guide: Discusses the reuse of time characteristics and dimension views in multiple DSOs and fact models.

* SAP Data Fabric Architecture: Emphasizes the role of shared objects in reducing redundancy and improving data governance.

NEW QUESTION # 82

You create a DataStore object (advanced) using the "Data Mart DataStore Object" modeling property. Which behaviors are specific to this modeling property? Note: There are 2 correct answers to this question.

- A. The change log table will be filled only after data activation.
- **B. Query results are shown only when data has been activated.**
- **C. The records are treated as if all characteristics are in the key.**
- D. Reporting is done based on a union of the inbound and active tables.

Answer: B,C

NEW QUESTION # 83

You created an Open ODS View on an SAP HANA database table to virtually consume the data in SAP BW /4HANA. Real-time reporting requirements have now changed you are asked to persist the data in SAP BW /4HANA.

Which objects are created when using the "Generate Data Flow" function in the Open ODS View editor?

Note: There are 3 correct answers to this question.

- **A. Transformation**
- **B. DataStore object (advanced)**
- C. SAP HANA calculation view
- D. CompositeProvider
- **E. Data source**

Answer: A,B,E

Explanation:

* Open ODS View: An Open ODS View in SAP BW/4HANA allows virtual consumption of data from external sources (e.g., SAP HANA tables). It does not persist data but provides real-time access to the underlying source.

* Generate Data Flow Function: When using the "Generate Data Flow" function in the Open ODS View editor, SAP BW/4HANA creates objects to persist the data for reporting purposes. This involves transforming the virtual data into a persistent format within the BW system.

* Generated Objects:

* DataStore Object (Advanced): Used to persist the data extracted from the Open ODS View.

* Transformation: Defines how data is transformed and loaded into the DataStore Object (Advanced).

* Data Source: Represents the source of the data being persisted.

Key Concepts: Objects Created by "Generate Data Flow": When you use the "Generate Data Flow" function in the Open ODS View editor, the following objects are created:

* DataStore Object (Advanced): This is the primary object where the data is persisted. It serves as the storage layer for the data extracted from the Open ODS View.

* Transformation: A transformation is automatically generated to map the fields from the Open ODS View to the DataStore Object (Advanced). This ensures that the data is correctly structured and transformed during the loading process.

* Data Source: A data source is created to represent the Open ODS View as the source of the data. This allows the BW system to extract data from the virtual view and load it into the DataStore Object (Advanced).

* B. SAP HANA Calculation View: While Open ODS Views may be based on SAP HANA calculation views, the "Generate Data Flow" function does not create additional calculation views. It focuses on persisting data within the BW system.

* E. CompositeProvider: A CompositeProvider is used to combine data from multiple sources for reporting. It is not automatically created by the "Generate Data Flow" function.

References: SAP BW/4HANA Documentation on Open ODS Views: The official documentation explains the "Generate Data Flow" function and its role in persisting data.

SAP Note on Open ODS Views: Notes such as 2608998 provide details on how Open ODS Views interact with persistent storage objects.

SAP BW/4HANA Best Practices for Data Modeling: These guidelines recommend using transformations and DataStore Objects (Advanced) for persisting data from virtual sources.

By using the "Generate Data Flow" function, you can seamlessly transition from virtual data consumption to persistent storage, ensuring compliance with real-time reporting requirements.

NEW QUESTION # 84

.....

It is known to us that our C_BW4H_2505 learning materials have been keeping a high pass rate all the time. There is no doubt that it must be due to the high quality of our study materials. It is a matter of common sense that pass rate is the most important standard to testify the C_BW4H_2505 training files. The high pass rate of our study materials means that our products are very effective and useful for all people to pass their C_BW4H_2505 Exam and get the related certification. So if you buy the C_BW4H_2505 study questions from our company, you will get the certification in a shorter time.
