Practice AD0-E716 Exams & Excellect AD0-E716 Pass Rate

Currently, if you want to make AD0-E716 exam certification more tied to your status in the IT industry with fierce competition, and make professional competence stronger in the IT industry, you can choose our ExamsLabs's AD0-E716 Exam Training materials. With efforts for many years, the passing rate of ExamsLabs's AD0-E716 certification exam has reached as high as 100%. Choosing ExamsLabs means to choose success.

Adobe Commerce Developer with Cloud Add-on Sample Questions (Q28-Q33):

NEW QUESTION # 28

For security reasons, merchant requested to a developer to change default admin url to a unique url for every branch/environment of their Adobe Commerce Cloud project.

Which CLI command would the developer use update the admin url?

- A. ece-tools variable:update ADMIN_URL
- B. magento-cloud variable:set ADMIN_URL
- C. bin/magento adminurl:set <admin_url>

Answer: B

Explanation:

The CLI command that the developer would use to update the admin url is `magento-cloud variable:set ADMIN_URL`. This command sets an environment variable called `ADMIN_URL` with a custom value for the admin url on a specific environment. Environment variables are configuration settings that affect the behavior of the Adobe Commerce Cloud application and services. By setting an environment variable for `ADMIN_URL`, the developer can change the default admin url to a unique url for every branch/environment of their Adobe Commerce Cloud project. NEW QUESTION # 29

There is the task to create a custom product attribute that controls the display of a message below the product title on the cart page, in order to identify products that might be delivered late.

The new EAV attribute `is_delayed` has been created as a boolean and is working correctly in the admin panel and product page.

What would be the next implementation to allow the `is_delayed` EAV attribute to be used in the `.phtml` cart page such as `$block-`

`>getProduct()->getIsDelayed()`?

A)

Create a new file `etc/catalog_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Catalog:etc/catalog_attributes.xsd">
    <group name="quote_item">
        <attribute name="is_delayed" />
    </group>
</config>
```

B)

Create a new file `etc/extension_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:framework:Api/etc/extension_attributes.xsd">
    <extension_attributes_for name="Magento\Catalog\Api\Data\ProductRenderInterface">
        <attribute code="is_delayed" type="bool" />
    </extension_attributes>
</config>
```

C)

Create a new file `etc/eav_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Eav:etc/eav_attributes.xsd">
    <entity type="quote_item">
        <attribute code="is_delayed">
            <field code="is_visible" locked="true" />
        </attribute>
    </entity>
</config>
```

- A. Option A
- B. Option C
- C. Option B

Answer: A

Explanation:

To allow the `is_delayed` EAV attribute to be used in the `.phtml` cart page, the developer needs to create a new file called `etc/catalog_attributes.xml`. This file will contain the definition of the `is_delayed` attribute.

The following code shows how to create the `etc/catalog_attributes.xml` file:

XML

```
<?xml version="1.0"?>
<catalog_attributes>
    <attribute code="is_delayed" type="int">
        <label>Is Delayed</label>
        <note>This attribute indicates whether the product is delayed.</note>
        <sort_order>10</sort_order>
        <required>false</required>
    </attribute>
</catalog_attributes>
```

Once the `etc/catalog_attributes.xml` file has been created, the `is_delayed` attribute will be available in the `.phtml` cart page. The attribute can be accessed using the `getIsDelayed()` method of the Product class.

PHP

```
$product = $block->getProduct();
```

```
$isDelayed = $product->getIsDelayed();
```

The `isDelayed` variable will contain the value of the `is_delayed` attribute. If the value of the attribute is 1, then the product is delayed. If the value of the attribute is 0, then the product is not delayed.

NEW QUESTION # 30

An Adobe Commerce developer is about to deploy a critical feature to their Adobe Commerce Cloud (Pro Plan) production. They want to create a snapshot in order to be able to rollback if there is an issue with the feature. How would they create the snapshot?

- A. Use the Cloud CLI for Commerce dedicated command.
- B. Create a ticket to Adobe Commerce Cloud support.
- C. Use the dedicated button on Project Web Interface.

Answer: A

Explanation:

To create a snapshot before deploying changes in Adobe Commerce Cloud (Pro Plan), the recommended approach is to use the Cloud CLI, which provides a dedicated command for creating snapshots. This allows for quick rollback if any issues arise post-deployment.

* Creating a Snapshot with Cloud CLI:

* The Adobe Commerce Cloud CLI tool includes commands for managing snapshots, which capture the current state of code and data, ensuring you have a restore point before making critical changes.

* Why Option B is Correct:

* The Cloud CLI is the most direct way to create a snapshot, giving developers control over when and how snapshots are generated. Option A is incorrect as there is no button for snapshot creation in the Web Interface, and Option C is unnecessary as support is not required to create a snapshot.

* References:

* Adobe Commerce Cloud documentation on Creating and Managing Snapshots

NEW QUESTION # 31

There is the task to create a custom product attribute that controls the display of a message below the product title on the cart page, in order to identify products that might be delivered late.

The new EAV attribute `is_delayed` has been created as a boolean and is working correctly in the admin panel and product page.

What would be the next implementation to allow the `is_delayed` EAV attribute to be used in the .phtml cart page such as `$block->getProduct()->getIsDelayed()`?

A)

Create a new file `etc/catalog_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Catalog:etc/catalog_attributes.xsd">
    <group name="quote_item">
        <attribute name="is_delayed" />
    </group>
</config>
```

B)

Create a new file `etc/extension_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:framework:Api/etc/extension_attributes.xsd">
    <extension_attributes for="Magento\Catalog\Api\Data\ProductRenderInterface">
        <attribute code="is_delayed" type="bool" />
    </extension_attributes>
</config>
```

C)

Create a new file `etc/eav_attributes.xml`:

```
<config xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="urn:magento:module:Magento_Eav:etc/eav_attributes.xsd">
    <entity type="quote_item">
        <attribute code="is_delayed">
            <field code="is_visible" locked="true" />
        </attribute>
    </entity>
</config>
```

- A. Option A
- B. Option C
- C. Option B

Answer: A

Explanation:

To allow the `is_delayed` EAV attribute to be used in the .phtml cart page, the developer needs to create a new file called `etc/catalog_attributes.xml`. This file will contain the definition of the `is_delayed` attribute.

The following code shows how to create the `etc/catalog_attributes.xml` file:

XML

```
<?xml version="1.0"?>
```

```

<catalog_attributes>
<attribute code="is_delayed" type="int">
<label>Is Delayed</label>
<note>This attribute indicates whether the product is delayed.</note>
<sort_order>10</sort_order>
<required>>false</required>
</attribute>
</catalog_attributes>

```

Once the etc/catalog_attributes.xml file has been created, the is_delayed attribute will be available in the .phtml cart page. The attribute can be accessed using the getIsDelayed() method of the Product class.

PHP

```
$product = $block->getProduct();
```

```
$isDelayed = $product->getIsDelayed();
```

The isDelayed variable will contain the value of the is_delayed attribute. If the value of the attribute is 1, then the product is delayed. If the value of the attribute is 0, then the product is not delayed.

NEW QUESTION # 32

An Adobe Commerce developer is tasked to add a file field to a custom form in the administration panel, the field must accept only .PDF files with size less or equal than 2 MB. So far the developer has added the following code within the form component xml file, inside the fieldset node:

```

<field name="pdf_file" formElement="fileUploader">
  <formElements>
    <fileUploader>
      <settings>
        <uploaderConfig>
          <param xsi:type="string" name="url">myvendor_mymodule/customForm/uploadPdf</param>
        </uploaderConfig>
      </settings>
    </fileUploader>
  </formElements>
</field>

```

How would the developer implement the validations?

A)

Add the Validations Within the HyVendor\MyModule\Controller\Adminhtml\CustomEntity\UploadPdf Controller

```

public function execute()
{
    $file = $this->fileUploaderFactory->create($this->getRequest()->getPdfFile());
    if($file->getExtension() == 'pdf') {
        throw new InvalidFileException(__('The file must be PDF.'));
    }
    if($file->getSize() >= '2048000') {
        throw new InvalidFileException(__('The file size must be less or equal than 2MB'));
    }
    return $this->resultFactory->create(ResultFactory::TYPE_PAGE);
}

```

B)

Add a virtual type for MyVendor\MyModule\Model\CustomPdfUploader specifying the allowedExtensions and the maxFileSize for the constructor, within the module's di.xml:

```

<type name="MyVendor\MyModule\Model\CustomPdfUploader">
  <arguments>
    <argument name="allowedExtensions" xsi:type="string">pdf</argument>
    <argument name="maxFileSize" xsi:type="number">2048000</argument>
  </arguments>
</type>

```

C)

Add the following code inside the <settings> node:

```

<allowedExtensions>pdf</allowedExtensions>
<maxFileSize>2048000</maxFileSize>

```

- A. Option C
- B. Option B
- C. Option A

Answer: B

Explanation:

The developer can add a virtual type for `MyVendor\MyModule\Model\customPdfUploader` specifying the `allowedExtensions` and the `maxFileSize` for the constructor, within the module's `di.xml`. This way, the developer can reuse the existing file uploader class and customize it for the specific field without modifying the core code.
