

Free PDF 2025 Useful HP HPE7-A03 Exam Pattern

What's more, part of that Actual4Certs HPE7-A03 dumps now are free: <https://drive.google.com/open?id=1d7puuwNGdnQyC0zQZZ0tkXQS74hGC1ig>

We have first-rate information protection system, if you purchasing HPE7-A03 exam materials from us, we can ensure you that the safety of your email box. We respect your privacy and will never send junk email to you. HPE7-A03 exam dumps of us are also high-quality, and will help you pass the exam and get the certificate successfully. What's more, we have professional online chat service stuff, if you have any questions about the HPE7-A03 Exam Materials, just have a conversation with them. We will give you reply as quickly as possible.

HP HPE7-A03 Exam Syllabus Topics:

Topic	Details
Topic 1	Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.
Topic 2	Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.
Topic 3	Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.
Topic 4	Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.

Free PDF High-quality HP - HPE7-A03 Exam Pattern

In today's society, our pressure grows as the industry recovers and competition for the best talents increases. By this way the HPE7-A03 exam is playing an increasingly important role to assess candidates. Considered many of our customers are too busy to study, the HPE7-A03 real study dumps designed by our company were according to the real exam content, which would help you cope with the HPE7-A03 Exam with great ease. The masses have sharp eyes, with so many rave reviews and hot sale our customers can clearly see that how excellent our HPE7-A03 exam questions are. After carefully calculating about the costs and benefits, our HPE7-A03 prep guide would be the reliable choice for you, for an ascending life.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

You are going with a 3-tier design and need to calculate the oversubscription ratio on the Access, Distribution, Core, and ToR Layer. What is a suitable oversubscription ratio for each layer?

Answer:

Explanation:

Answer Area

Explanation:

Access - 20:1

Aggregation - 4:1

Core - 2:1

ToR - Not typically applicable in a 3-tier design; however, if ToR were used, it could be 24:1 or better depending on the specific design and requirements.

NEW QUESTION # 36

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client decides that they

would like for all of their exposed printer, conference room, and VoIP phone connections to be controlled by a stateful firewall. What could be planned to ensure that these ports will meet the customer's requirements?

- A. Multi-Zone
- **B. Tunneled Node**
- C. Web Portal
- D. Airgroup

Answer: B

Explanation:

To control exposed printer, conference room, and VoIP phone connections with a stateful firewall, utilizing Tunneled Node functionality would be effective. Tunneled Node allows for the encapsulation of wired Ethernet traffic into a user-based tunnel, similar to how wireless traffic is handled. This means that traffic from these devices can be sent through a centralized controller where stateful firewall policies can be applied. This setup ensures that the specific ports used by these devices are subjected to the same level of security scrutiny and policy enforcement as wireless traffic, aligning with the client's requirements for a secure and controlled network environment.

NEW QUESTION # 37

A global cruise line company needs to refresh its current fleet. They will refresh the insides of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware.

They start with the smallest ship with a maximum of 800 guests

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDF's of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single

OM2 pair to the IDF. the maximum length is 60 meters (200 ft). Each technical room is connected by a single

OM2 pair to the IDF. with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running InstantOS (less than 300 APs).

the customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed.

The week after the presentation of your design to the CIO of the cruise line company, the CIO calls you to discuss increasing the security on the wired network infrastructure. Since one of their competitors had one of their cruise ships cyber hacked, the CSO of the cruise line has mandated increased security on the wired network. They have heard about dynamic segmentation and central and decentral overlay networks. For their POS systems, they need a low-latency network connection between the POS system and the POS server in the data center on the ship. Also, the CSO wants to enhance the WLAN security as well by tunneling all user traffic. What solution fits the customer's requirements?

- A. Standardize on Aruba 6300 switches for the edge. 8320 for the RR. 8360 for the stub/border, and utilize Aruba Central NetConductor
- B. Standardize on Aruba 6300 switches for the edge. 8325 for the RR. 8360 for the stub/border. 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor.
- C. Standardize on Aruba 6200 switches for the edge. 8325 for the RR. 8360 for the stub/border, and utilize Aruba Central NetConductor
- D. Standardize on Aruba 6300 switches for the edge. 8320 for the RR. 8320 for the stub/border. 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor
- **E. Standardize on Aruba 6300 switches for the edge. 8320 for the RR. 8360 for the stub/border. 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor.**

Answer: E

Explanation:

Considering the global cruise line company's requirement to enhance wired network security while ensuring low-latency connections for POS systems and tunneling all user traffic for WLAN security, the most fitting solution involves a combination of Aruba switches and gateway along with a network management and orchestration tool. Specifically, standardizing on Aruba 6300 switches for the edge layer caters to the need for high-performance, fan-less switches with 10GbE uplinks, matching the requirement for upgraded cabin and technical room connections. The Aruba 8320 as a Route Reflector (RR) and Aruba 8360 for the stub/border provide a robust core and distribution layer with high throughput and redundancy. The inclusion of a 9240 WLAN Gateway addresses the need for secure WLAN user traffic tunneling. Utilizing Aruba Central NetConductor enhances network management efficiency, security policy enforcement, and dynamic segmentation across the wired and wireless infrastructure, aligning with the ESP architecture from Aruba and meeting the company's security enhancement objectives.

NEW QUESTION # 38

Match the deployment type to the estimated number of APs.

	Answer Area	
Capacity based design with low to mid density		100,000 ft ² / 9000 m ² building 100,000/10,000 = 10 APs
Coverage based design		100,000 ft ² / 9000 m ² building 100,000/5000 = 20 APs
High-capacity design		100,000 ft ² / 9000 m ² building 100,000/2500 = 40 APs
Very low-density, low coverage		100,000 ft ² / 9000 m ² building 100,000/1500 = 67 APs

Answer:

Explanation:

	Answer Area	
Capacity based design with low to mid density	Capacity based design with low to mid density	100,000 ft ² / 9000 m ² building 100,000/10,000 = 10 APs
Coverage based design	Very low-density, low coverage	100,000 ft ² / 9000 m ² building 100,000/5000 = 20 APs
High-capacity design	Coverage based design	100,000 ft ² / 9000 m ² building 100,000/2500 = 40 APs
Very low-density, low coverage	High-capacity design	100,000 ft ² / 9000 m ² building 100,000/1500 = 67 APs

Explanation:

Capacity based design with low to mid density - 100,000 ft² / 900 m² building 100,000/10,000 = 10 APs
Coverage based design - 100,000 ft² / 900 m² building 100,000/2,500 = 40 APs
High-capacity design - 100,000 ft² / 900 m² building 100,000/1,500 = 67 APs
Very low-density, low coverage - 100,000 ft² / 900 m² building 100,000/500 = 20 APs
The deployment of Access Points (APs) in a wireless network design depends on the required density and coverage needed:

- * Capacity based design with low to mid density is often used in environments like office spaces where there is a moderate amount of users and devices. Fewer APs are required compared to high-density scenarios.
- * Coverage based design typically requires more APs than a low-density capacity design because the goal is to provide a wireless signal to all areas, regardless of the number of users.
- * High-capacity design is for environments like stadiums or conference centers where a high number of users are expected to be concentrated in a particular area. Thus, a higher number of APs is needed to accommodate the user load.
- * Very low-density, low coverage is suitable for areas that have few users over a large space, such as warehouses or outdoor areas. Fewer APs are required as the focus is on covering space rather than supporting a large number of devices.

NEW QUESTION # 39

You hired a junior engineer to assist you with a large-scale network infrastructure project. The engineer has never worked on such a complex project 'ants to better understand the role that each role that each stakeholder will play in the project.

Match the stakeholder title to the responsibilities that would most likely apply to their role.

Answer:

Explanation:

- * CISO: responsible for establishing security policy and selecting security controls for the infrastructure.
- * Network Design/Architecture: responsible for authoring the low-level design, and creating the configuration to meet the technical requirements.
- * Network Operations: responsible for supporting, troubleshooting, and monitoring the wired/wireless infrastructure.
- * Security Operations: responsible for investigating IDS/IPS incidents and managing firewalls.

NEW QUESTION # 40

.....

Being the most competitive and advantageous company in the market, our HPE7-A03 practice quiz have help tens of millions of exam candidates realize their dreams all these years. If you are the dream-catcher, we are willing to offer help with our HPE7-A03 Study Guide like always. And if you buy our HPE7-A03 exam materials, then you will find that passing the exam is just a piece of cake in front of you.
