

Free PDF 2025 Useful NCP-DB: Dump Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Check

BTW, DOWNLOAD part of PracticeMaterial NCP-DB dumps from Cloud Storage: <https://drive.google.com/open?id=1mkLiELI3tcGfkz3ge28Tx7kwIYQIGJme>

You only need 20-30 hours to learn our NCP-DB test braindumps and then you can attend the exam and you have a very high possibility to pass the exam. For many people whether they are the in-service staff or the students they are busy in their job, family lives and other things. But you buy our NCP-DB prep torrent you can mainly spend your time energy and time on your job, the learning or family lives and spare little time every day to learn our Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 exam torrent. Our answers and questions are compiled elaborately and easy to be mastered. Because our NCP-DB Test Braindumps are highly efficient and the passing rate is very high you can pass the exam fluently and easily with little time and energy needed.

Our NCP-DB test braindumps are in the leading position in the editorial market, and our advanced operating system for NCP-DB latest exam torrent has won wide recognition. As long as you choose our NCP-DB exam questions and pay successfully, you do not have to worry about receiving our learning materials for a long time. We assure you that you only need to wait 5-10 minutes and you will receive our NCP-DB Exam Questions which are sent by our system. When you start learning, you will find a lot of small buttons, which are designed carefully. You can choose different ways of operation according to your learning habits to help you learn effectively.

NCP-DB Valid Test Book & NCP-DB Dumps Questions

There are some prominent features that are making the Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam dumps the first choice of NCP-DB certification exam candidates. The prominent features are real and verified Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 (NCP-DB) exam questions, availability of Nutanix Nutanix exam dumps in three different formats, affordable price, 1 year free updated Nutanix NCP-DB Exam Questions download facility, and 100 percent Nutanix NCP-DB exam passing money back guarantee.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q224-Q229):

NEW QUESTION # 224

A Development team is asking for updated data for a cloned MongoDB instance that is being used as source data for a script. Which task should be performed by an NDB administrator?

- A. Execute a clone update.
- **B. Run a Clone refresh.**
- C. Provision a MongoDB instance.
- D. Clone the DB from the latest point in time data.

Answer: B

Explanation:

A Development team requesting updated data for a cloned MongoDB instance used as source data for a script needs the latest snapshot or point-in-time data. In NDB, the "Clone Refresh" task updates an existing clone with the most recent data from the source database, ensuring the development team has access to current information without recreating the clone. This is the most efficient approach for maintaining an updated clone.

* Option A (Clone the DB from the latest point in time data) is incorrect because it creates a new clone, duplicating effort instead of refreshing the existing one.

* Option B (Execute a clone update) is incorrect as "clone update" is not a standard NDB task; refresh is the correct term.

* Option C (Provision a MongoDB instance) is incorrect because it provisions a new instance, not an update to the clone.

* Option D is correct as Clone Refresh syncs the clone with the latest source data.

NEW QUESTION # 225

When using the Patch OS now feature in NDB, how would an administrator limit the updates to security updates only for Red Hat-based operating systems?

- A. Check Advanced Options and under Pre-post commands, enter yum update security in the pre-operating system patching command window.
- **B. Check Advanced Options and under Custom commands, enter yum update -security in the operating system patching command window.**
- C. Point the database VM to a custom patch repository before using the Patch OS now feature.
- D. Point the database VM to a custom patch repository and enter yum update - security command.

Answer: B

Explanation:

When using the "Patch OS now" feature in NDB to apply updates to a Red Hat-based operating system, the administrator can limit updates to security patches only by leveraging the Advanced Options. Under the

"Custom commands" section of the operating system patching command window, entering `yum update -- security` instructs the package manager to install only security-related updates. This ensures the system remains secure without applying all available updates, which could introduce instability.

Other options are incorrect or incomplete:

* A. Point the database VM to a custom patch repository and enter `yum update --security` command This requires manual intervention outside NDB's patching framework.

* B. Check Advanced Options and under Pre-post commands, enter `yum update security` in the pre- operating system patching command window: Pre-post commands are for pre/post actions, not the main patching process, and the syntax lacks the `--security` flag.

* C. Point the database VM to a custom patch repository before using the Patch OS now feature:

This sets up a repository but doesn't specify security-only updates within NDB's interface.

Thus, the verified answer is D, aligning with NDB's patching customization.

NEW QUESTION # 226

Which ports must be open between the NDB server and Controller VMs to facilitate iSCSI connections?

- A. 5985 and 5986
- **B. 3205 and 3260**
- C. 22 and 9440
- D. 80 and 443

Answer: B

Explanation:

According to the Nutanix Database Automation (NCP-DB) course, the ports 3205 and 3260 are required for iSCSI connections between the NDB server and the Controller VMs1. Port 3205 is used for the NDB iSCSI initiator service, which initiates the iSCSI sessions and sends SCSI commands to the Controller VMs1. Port

3260 is used for the iSCSI target service, which listens for incoming iSCSI requests and provides access to the storage devices on the Controller VMs1. The other options are not related to iSCSI connections. Port 22 is used for SSH, port 9440 is used for Prism Central, port 80 is used for HTTP, port 443 is used for HTTPS, port

5985 is used for WinRM HTTP, and port 5986 is used for WinRM HTTPS2. References:

NEW QUESTION # 227

Refer to the exhibit.

[2023-01-18 16:35:55,131] [140504367732544] [INFO] [0000-NOPID], Operation results	
Operation Name	Provision Availability Group Database
Operation Status	FAILED
Failure Time	2023-01-18 14:33:46 (America/New_York)
Failed Step	Create and Register Database Server VMs
Operation Error	Provisioning of all the observers simultaneously took more than two hours

An administrator attempts to provision their first clustered database environment with NDB. The operation fails with the Operation Error shown in the exhibit.

Which database engine was being deployed during this operation?

- A. PostgreSQL
- **B. MySQL**
- C. Oracle
- D. Microsoft SQL

Answer: B

Explanation:

The error message in the exhibit indicates that the operation failed during the "Create and Register Database Server VMs" step because "Provisioning of all the observers simultaneously took more than two hours." This type of error is associated with MySQL, as it involves observers which are a part of MySQL Group Replication, used for ensuring high availability1. The other options are not related to the error message, as they do not use observers or Group Replication for clustering. References:

* 1: Nutanix Database Automation (NCP-DB) course, Module 5: Database High Availability, Lesson 5.2:

MySQL Group Replication, slide 7

NEW QUESTION # 228

An administrator needs to provision a 3-node MSSQL Server AG with the following configuration:

* Two database server VMS including the primary replica on a local site

* A third database server VM on a remote site
How many IP addresses will the network at each site require?

- A. Cluster VIP and 1 Listener IP on the local site
1 Cluster VIP and 1 Listener IP on the remote site
2 IPs in the local site and 1 on the remote site for the database server nodes
- B. 2 Cluster VIP and 1 listener IP on the local site
- C. 1 Cluster VIP and 1 Listener IP on the local site
1 Listener IP on the local site
2 IPs in the local site and 1 on the remote site for the database server nodes
- D. 1 Cluster VIP and 1 listener IP on the remote site
2 IPs in the local site and 1 on the remote site for the database server nodes
1 Cluster VIP on the local site
1 Cluster VIP and 1 Listener IP on the remote site
2 IPs in the local site and 1 on the remote site for the database server nodes

Answer: A

Explanation:

The correct answer is D. When setting up a 3-node MSSQL Server AG with two database server VMs on a local site and a third database server VM on a remote site, the network at each site will require the following IP addresses:

* 1 Cluster VIP and 1 Listener IP on the local site

* 1 Cluster VIP and 1 Listener IP on the remote site

* 2 IPs in the local site and 1 on the remote site for the database server nodes

This configuration ensures that each node in the cluster has a unique IP address, and each cluster and listener also has a unique IP address. This is necessary for the proper functioning of the cluster and to ensure that all nodes can communicate with each other and with clients.

NEW QUESTION # 229

.....

As we all know, NCP-DB certification is of great significance to highlight your resume, thus helping you achieve success in your workplace. So with our NCP-DB preparation materials, you are able to pass the exam more easily in the most efficient and productive way and learn how to study with dedication and enthusiasm, which can be a valuable asset in your whole life. There are so many advantages of our NCP-DB Guide dumps which will let you interested and satisfied.
