## Excellect 220-1101 Pass Rate & Pass 220-1101 Rate

According to different kinds of questionnaires based on study condition among different age groups, we have drawn a conclusion that the majority learners have the same problems to a large extent, that is low-efficiency, low-productivity, and lack of plan and periodicity. As a consequence of these problem, our 220-1101 test prep is totally designed for these study groups to improve their

capability and efficiency when preparing for 220-1101 Exams, thus inspiring them obtain the targeted 220-1101 certificate successfully. Our 220-1101 question torrent can play a very important part in helping you achieve your dream.

CompTIA 220-1101 Certification is an excellent starting point for anyone looking to pursue a career in IT. It provides a strong foundation of knowledge and skills that are highly valued by employers in the industry. Additionally, obtaining this certification can open up new opportunities for career advancement and help individuals stand out in a competitive job market.

## CompTIA A+ Certification Exam: Core 1 Sample Questions (Q134-Q139):

### NEW QUESTION # 134

A user needs a technician's help connecting a laptop to a projector. The projector is old and only has analog input. Which of the following cable types should the technician use to connect the laptop to the projector?

- A. DisplayPort
- B. HDMI
- C. RS-232
- **D. VGA**

**Answer: D**

Explanation:

VGA stands for Video Graphics Array, and it is a type of cable that can be used to transmit analog video signals between devices, such as laptops, monitors, or projectors. VGA cables have 15 pins arranged in three rows, and they are usually color-coded blue. VGA cables can support resolutions up to 2048 x 1536 pixels, but they have low quality and limited color depth compared to modern digital standards such as HDMI or DisplayPort.

A projector is a device that projects an image or a video onto a large surface, such as a wall or a screen. A projector can have different types of input ports, such as VGA, HDMI, DVI, or USB. A projector can also have different types of output technologies, such as LCD, DLP, or LED.

In this scenario, the user needs a technician's help connecting a laptop to a projector. The projector is old and only has analog input. This means that the projector can only accept analog video signals, and not digital ones.

Therefore, the technician should use a VGA cable to connect the laptop to the projector, as it is the most common type of analog video cable. The technician should also make sure that the laptop and the projector have compatible VGA ports, and that the laptop's display settings are adjusted to match the projector's resolution and aspect ratio.

### NEW QUESTION # 135

Which of the following network services allows a networked device to always be assigned the same IP address based on the device's MAC address?

- **A. DHCP**
- B. UTM
- C. LDAP
- D. DNS

**Answer: A**

Explanation:

Dynamic Host Configuration Protocol (DHCP) allows a networked device to always be assigned the same IP address based on the device's MAC address. DHCP can also assign other network configuration settings to devices automatically.

### NEW QUESTION # 136

In which of the following cloud models is the customer not responsible for hardware and OS layers but is responsible for the data and the application?

- **A. PaaS**
- B. IaaS
- C. SaaS
- D. CaaS

**Answer: A**

Explanation:

In Platform as a Service (PaaS), the cloud provider manages the hardware, operating system, and middleware, while the customer is responsible for managing data and applications.

\* Why Not B (SaaS): In SaaS, the provider manages all layers, including applications and data, leaving no responsibility for the customer.

\* Why Not C (IaaS): In IaaS, the customer manages the OS, data, and applications, while the provider only handles the hardware.

\* Why Not D (CaaS): CaaS (Container as a Service) is not a primary cloud model described in the CompTIA objectives and is less commonly referenced.

CompTIA A+ Exam Reference: Core 1 (220-1101), Section 4.1, cloud computing models.

### NEW QUESTION # 137

A technician is tasked with upgrading a laptop's RAM. Which of the following steps should the technician take FIRST?

- A. Verify the memory requirements of the motherboard.
- B. Run a diagnostic test on the current memory.
- C. Connect an electrostatic discharge strap.
- D. Confirm that both the current and new memory are from the same brand.

**Answer: A**

Explanation:

Explanation

If a technician is tasked with upgrading a laptop's RAM, the technician should verify the memory requirements of the motherboard first. The motherboard of the laptop will have specific requirements for the type and amount of RAM that can be installed. By verifying the memory requirements of the motherboard, the technician can ensure that the new RAM is compatible with the laptop. Before upgrading a laptop's RAM, a technician should verify the memory requirements of the motherboard to ensure the new RAM is compatible. The type, speed, and maximum capacity of the RAM should be checked to ensure it meets the requirements of the motherboard. References: CompTIA A+ Certification Exam Guide, pg. 347-348

### NEW QUESTION # 138

Which of the following models is an example of metered utilization?

- A. Reserved instance
- B. Subscription-based
- C. Multitenant
- D. Pay-as-you-go

**Answer: D**

Explanation:

Metered utilization is a pricing model for cloud computing services, where the customer pays only for the amount of resources that are consumed, such as CPU time, memory, storage, bandwidth, etc. The customer is billed based on the actual usage of the resources, rather than a fixed or upfront fee. Metered utilization is also known as usage-based pricing or pay-per-use<sup>12</sup>.

Pay-as-you-go is an example of metered utilization, where the customer pays for the cloud resources on demand, without any long-term commitment or contract. The customer can scale up or down the resources as needed, and only pay for what is used. Pay-as-you-go is a flexible and cost-effective option for customers who have unpredictable or variable workloads, or who want to try out new services or features<sup>12</sup>.

The other options are not examples of metered utilization. Reserved instance is a pricing model where the customer pays a discounted rate for a fixed amount of cloud resources for a specified period of time, such as one or three years. The customer can reserve the resources in advance, and benefit from lower costs and guaranteed availability. Reserved instance is suitable for customers who have predictable or steady workloads, or who want to optimize their budget<sup>12</sup>.

Subscription-based is a pricing model where the customer pays a fixed fee for a set of cloud services or features for a certain period of time, such as monthly or annually. The customer can access the services or features as much as needed, without worrying about the usage or consumption of the resources. Subscription-based is suitable for customers who want to have a consistent and predictable cost, or who want to access premium or exclusive services or features<sup>12</sup>.

Multitenant is not a pricing model, but a cloud architecture where multiple customers share the same physical or virtual resources, such as servers, databases, applications, etc. The resources are isolated and secured for each customer, and the customers can benefit from lower costs, higher scalability, and faster updates. Multitenant is a common characteristic of public cloud services, where the cloud provider manages and maintains the resources for the customers<sup>12</sup>.
