The value of professional qualification has been shown to rise with time. For the advancement of your profession, exams like the CheckPoint exam given by CheckPoint are crucial. Candidates aim to pass the Check Point Certified Security Administrator R81 exam on their first attempt. With CheckPoint 156-215.81 Exam Questions, applicants may study for and pass their desired

certification exam on the first attempt. You may use DumpsTests's top 156-215.81 study resources to prepare for the Check Point Certified Security Administrator R81 exam. The CheckPoint 156-215.81 exam questions offered by DumpsTests are dependable and trustworthy sources of preparation.

The CheckPoint 156-215.81 Exam consists of 90 multiple-choice questions and is timed at 90 minutes. To pass the exam, candidates must score at least 70%. 156-215.81 exam covers various topics such as Security Gateway architecture, VPNs, user management and authentication, and web filtering. The Check Point Certified Security Administrator R81 certification is valid for two years, after which candidates must recertify by passing the current exam. By obtaining this certification, security professionals can validate their expertise and enhance their credibility in the industry.

CheckPoint Check Point Certified Security Administrator R81 Sample Questions (Q310-Q315):

NEW QUESTION # 310
Which of the following is considered to be the more secure and preferred VPN authentication method?

- A. MD5
- B. Pre-shared secret
- C. Password
- D. Certificate

Answer: D

Explanation:
References: Certificate-based authentication is considered to be the more secure and preferred VPN authentication method. It uses digital certificates to verify the identity of the VPN client and server, and provides stronger encryption and mutual authentication. Password-based authentication methods are less secure and more vulnerable to brute-force attacks, phishing, and keylogging. MD5 is a hashing algorithm, not an authentication method. Pre-shared secret is a symmetric key that is shared between the VPN peers, but it can be compromised if it is not changed frequently or stored securely12 References: VPN authentication options, Windows VPN technical guide

NEW QUESTION # 311
You are going to perform a major upgrade. Which back up solution should you use to ensure your database can be restored on that device?

- A. backup
- B. snapshot
- C. logswitch
- D. Database Revision

Answer: B

Explanation:
The back up solution that should be used to ensure your database can be restored on that device is snapshot .
A snapshot creates a binary image of the entire root (lv_current) disk partition. This includes Check Point products, configuration, and operating system. A snapshot can be used to restore a Security Gateway or Security Management Server to its previous state at any time . Therefore, the correct answer is D. snapshot.

NEW QUESTION # 312
If an administrator wants to restrict access to a network resource only allowing certain users to access it, and only when they are on a specific network what is the best way to accomplish this?

- A. Create a rule allowing only specific source IP addresses access to the target network resource.
- B. Use a "New Legacy User at Location", specifying the LDAP user group that the users belong to, at the desired location
- C. Create an inline layer where the destination is the target network resource Define sub-rules allowing only specific sources to access the target resource
- D. Create an Access Role object, with specific users or user groups specified, and specific networks defined Use this access role as the "Source" of an Access Control rule

Answer: D

Explanation:
The best way to restrict access to a network resource only allowing certain users to access it, and only when they are on a specific network, is to create an Access Role object, with specific users or user groups specified, and specific networks defined. Then, use this access role as the "Source" of an Access Control rule. This allows for granular control over network traffic based on user identity and location3.

NEW QUESTION # 313
Which of the following are types of VPN communities?

- A. Star, octagon, and combination
- B. Combined and star
- C. Pentagon, star, and combination
- D. Meshed, star, and combination

Answer: D

NEW QUESTION # 314
Check Point ClusterXL Active/Active deployment is used when:

- A. Only when there is Multicast solution set up
- B. There is High Availability solution set up
- C. There is Load Sharing solution set up
- D. Only when there is Unicast solution set up

Answer: C

Explanation:
Check Point ClusterXL Active/Active deployment is used when there is Load Sharing solution set up. Load Sharing enables multiple Security Gateways to share traffic and provide high availability12.
