That's the reason why you should choose us.

CompTIA Linux+ Certification Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which of the following is the main reason for setting up password expiry policies?

- A. To increase password strength and complexity
- **B. To mitigate the use of exposed passwords**
- C. To avoid using the same passwords repeatedly
- D. To force usage of passwordless authentication

Answer: B

Explanation:

Password expiry policies ensure that even if a password has been compromised, its period of validity is limited, reducing the risk of long-term unauthorized access.

NEW QUESTION # 69

In the echo "profile-\$num-\$name" line of a shell script, the variable \$num seems to not be expanding during execution. Which of the following notations ensures the value is expanded?

- A. echo 'profile-\$num-\$name'
- B. echo "profile-\$num-\$name"
- C. echo "profile-\${num}-\$name"
- D. echo "profile-\$(num)-\$name"

Answer: C

Explanation:

Using \${num} ensures correct variable expansion, especially when variables are adjacent to other characters or hyphens. This prevents ambiguity and guarantees \$num is properly expanded within the string.

NEW QUESTION # 70

A systems administrator wants to prevent the current contents of a file from being overwritten and wants to allow new additions at the end of the file. Which of the following commands should the administrator use?

- A. setfacl -m m:r file
- B. setenforce file
- C. chmod +t file
- D. chattr +a file

Answer: D

Explanation:

The chattr +a command sets the append-only attribute on a file. This prevents overwriting or deletion of existing contents, while still allowing new data to be appended to the end of the file.

NEW QUESTION # 71

Users connecting to a MySQL database on a Linux system report frequent errors. An administrator reviews the following partial output of the /proc/meminfo and free commands:

	total	used	free
Mem:	1011966	151930	860036
Swap:	1191972	1181716	10256

MemTotal:	1011966 kB
MemFree:	
...	
SwapTotal:	1191972 kB
SwapFree:	10256 kB

Which of the following should the administrator do to ensure that the MySQL service will continue to run even if the system runs out of swap space? (Choose two.)

- A. Reload the /etc/fstab file by issuing the mount -a command.(Not sufficient alone)
- B. Use disk quotas on the swap space to prevent MySQL from overutilizing the swap partition.
- C. Issue the sysctl -w vm.overcommit_ratio=100 command.
- D. Issue the sysctl -w vm.overcommit_memory=2 command.(Invalid key)
- E. Issue the mkswap /dev/sda2; swapon -v /dev/sda2 command.
- F. Issue the dd if=/dev/zero of=/swapfile bs=1024 count=65536 command.

Answer: E,F

Explanation:

Creating a swap file with `dd if=/dev/zero of=/swapfile bs=1024 count=65536` allocates additional swap space that MySQL can use when RAM is exhausted.

Formatting and enabling a swap partition with `mkswap /dev/sda2; swapon -v /dev/sda2` brings another swap device online, further increasing the system's swap capacity.

NEW QUESTION # 72

Which of the following describes the method of consolidating system events to a single location?

- A. Health checks
- **B. Log aggregation**
- C. Webhooks
- D. Threshold monitoring

Answer: B

Explanation:

Log aggregation is the process of collecting and consolidating logs from multiple sources into a single location, making it easier to analyze and manage system events.

NEW QUESTION # 73

.....
