Effective Fortinet FCP_FMG_AD-7.6: Practice FCP - FortiManager 7.6 Administrator Test Online - Hot VCEdumps Practice FCP_FMG_AD-7.6 Exam Fee

It Contains a pool of real Fortinet FCP_FMG_AD-7.6 exam questions. This FCP - FortiManager 7.6 Administrator (FCP_FMG_AD-7.6) practice test is compatible with every windows-based system. One downloaded does not require an active internet connection to operate. You can self-evaluate your mistakes after each FCP_FMG_AD-7.6 Practice Exam attempt and work on the weak points that require more attention.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30

You are moving managed FortiGate devices from one ADOM to a new ADOM.
Which statement correctly describes the expected result?

- A. The shared policy package will not be moved to the new ADOM automatically.
- B. Policy packages will be imported into the new ADOM automatically.
- C. Any unused objects from a previous ADOM are moved to the new ADOM automatically.
- D. The shared device settings will be installed automatically.

Answer: A

Explanation:

When you move devices from one ADOM to another ADOM, shared policy packages and objects do not move to the new ADOM. You will need to import policy packages from managed devices.

NEW QUESTION # 31

Refer to the exhibit. What are two results from the configuration shown in the exhibit? (Choose two.)

```
FortiManager# config system global
(global)# set workspace-mode normal
(global)# end
FortiManager#
```

- A. The same administrator can lock more than one ADOM at the same time.
- B. The administrator can lock policy blocks and FortiManager global ADOM.
- C. Ungraceful closed sessions will keep the ADOM in a locked state until the administrator session times out.
- D. The administrator must have access to the ADOM to approve changes.

Answer: B,C

Explanation:

In normal workspace mode, ungraceful session closures will keep the ADOM locked until the session times out, preventing other administrators from editing. Normal workspace mode allows administrators to lock policy blocks and the global ADOM, providing granular locking control.

NEW QUESTION # 32

Refer to the exhibit. An administrator is about to add the FortiGate device to FortiManager using the discovery process.
FortiManager is operating behind a NAT device, and the administrator configured the FortiManager NATed IP address under the FortiManager system administration settings.

What is the expected result?

- A. During discovery, FortiManager sets both the FortiManager NATed IP address and NAT device IP address on FortiGate.
- B. During discovery, FortiManager sets the NATed device IP address on FortiGate.
- C. During discovery, FortiManager sets the FortiManager NATed IP address on FortiGate.
- D. During discovery, FortiManager uses only the FortiGate serial number to establish the connection.

Answer: C

Explanation:

You can configure the FortiManager NATed IP address on FortiGate under the central management configuration. This allows FortiGate to announce itself to FortiManager and try to re-establish the FGFM tunnel, if it is torn down. Configuring the FortiManager NATed IP address on FortiGate allows both FortiManager and FortiGate to re-establish the FGFM tunnel. Also, if you configure the FortiManager NATed IP address under the FortiManager system administrator settings, FortiManager sets this address on FortiGate during the discovery process.

NEW QUESTION # 33

Refer to the exhibits.

Diagnose output

```
FortiManager # get system status
Platform Type       : FMG-VM64-KVM
Platform Full Name  : FortiManager-VM64-KVM
Version             : v7.6.1-build3344 241023 (GA.M)
Serial Number       : FMG-VMTM24012945
BIOS version        : 04000002
```

Diagnose output

```
FortiManager # diagnose dvm device list
--- There are currently 5 devices/vdoms managed ---
--- There are currently 5 devices/vdoms count for license ---

TYPE          OID   SN                HA   IP           NAME                ADOM   IPS                FIRMWARE

FortiManager # diagnose test deploymanager reloadconf 262
Retrieving configuration file from FGT...
Error: Configuration file import error.
```

An administrator runs the reload failure command `diagnose test deploymanager reloadconf 262` on FortiManager. Why does the administrator receive an error message?

- A. FortiManager requires the FortiGate serial number instead of the ID number.
- **B. The administrator just recently added FortiGate HQ-NGFW as a model device.**
- C. The administrator must use the FortiGate name instead of the ID number.
- D. FortiManager does not support FortiOS version 7.0.

Answer: B

Explanation:

The error occurs because the FortiGate HQ-NGFW device with ID 262 is a newly added model device and has not yet been fully synchronized or installed with a configuration package, which causes the reload configuration command to fail.

NEW QUESTION # 34

An administrator has enabled Service Access on FortiManager. What is the purpose of Service Access on the FortiManager interface?

- A. It allows third-party applications to gain read/write access to FortiManager.
- B. It allows administrative access to FortiManager.
- C. It allows FortiManager to determine the connection status of managed devices.

- **D. It allows FortiManager to respond to requests for FortiGuard services from FortiGate devices.**

Answer: D

Explanation:

Select the Fortinet services that are allowed access on this interface. These include FortiGate Updates and Web Filtering. Service access is not enabled on any port by default.

NEW QUESTION # 35

.....

Our braindumps for FCP_FMG_AD-7.6 real exam are written to highest standard of technical profession, tested by our senior IT experts and certified trainers. You can totally trust our FCP_FMG_AD-7.6 exam prep materials because we guarantee the best quality of our products. With our latest FCP_FMG_AD-7.6 Training Materials, you will pass the certification exam in your first try. We hope you clear exam successfully with our products.
