Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q32-Q37):

NEW QUESTION # 32

How are the configurations synchronized between two FortiGate VMs in an active-passive HA with SDN connector failover deployed from the Azure marketplace?

- **A. Using unicast FGCP**
- B. An Azure function distributes the configuration files
- C. By configuring FGSP on the primary
- D. Using system autoscaling during a failover

Answer: A

Explanation:

In an active-passive HA deployment of FortiGate VMs in Azure using the Marketplace template, configuration synchronization is handled via unicast FortiGate Clustering Protocol (FGCP). FGCP allows the primary unit to replicate its configuration and session information to the secondary unit, ensuring seamless failover.

NEW QUESTION # 33

In Microsoft Entra ID, what is the primary administrative unit that represents an organization and its relationship with Microsoft's cloud services?

- **A. Microsoft Entra tenant**
- B. Microsoft Entra organization
- C. Microsoft Entra domain
- D. Microsoft Entra subscription

Answer: A

Explanation:

A Microsoft Entra tenant is the primary administrative unit that represents an organization within Microsoft's identity platform. It defines the boundary for identity management, access control, and resource governance, and serves as the core entity that connects the organization to Microsoft's cloud services such as Azure and Microsoft 365.

NEW QUESTION # 34

A Linux server was deployed in a protected subnet with a dynamic IP address. A FortiGate VM in the internal subnet provides traffic filtering to it, and you must implement a firewall policy using the IP address of the Linux server. Which feature could help integrate FortiGate using Linux server tags?

- A. Service Fabric Cluster
- B. Targets Management
- C. Microsoft Entra ID
- **D. Software-defined network (SDN) connector**

Answer: D

Explanation:

The Software-defined network (SDN) connector allows FortiGate to dynamically pull metadata such as tags, IP addresses, and resource groups from Azure resources. This enables automatic policy updates based on dynamic IP changes, such as those of a Linux server in a protected subnet.

NEW QUESTION # 35

What are two characteristics of Azure standard public IP addresses? (Choose two.)

- **A. They support the use of availability zones**
- **B. They can be dynamic or static**
- C. They can be used with load balancers of any SKU
- D. They require the configuration of NSGs for inbound traffic

Answer: A,B

Explanation:

They support the use of availability zones - Standard public IP addresses are zone-redundant and support availability zone deployments for high availability.

They can be dynamic or static - Azure standard public IPs can be configured as static or dynamic, offering flexibility based on deployment needs.

NEW QUESTION # 36

224.0.0.2             01-00-05-00-00-02     static
```

Answer: C

Explanation:

Azure assigns MAC addresses in a specific Organizationally Unique Identifier (OUI) range. The MAC address d8-34-99-c5-0A-BC begins with d8-34-99, which is a Microsoft-assigned OUI used in Azure virtual networks. This strongly indicates the output was taken from a VM running in Azure.
