Certification BCS CTFL4 Dumps & Certification CTFL4 Test Answers

The CTFL4 exam prep from our company will offer the help for you to develop your good study habits. If you buy and use our CTFL4 study materials, you will cultivate a good habit in study. More importantly, the good habits will help you find the scientific prop learning methods and promote you study efficiency, and then it will be conducive to helping you pass the CTFL4 Exam in a short time. So hurry to buy the CTFL4 test guide from our company, you will benefit a lot from it.

BCS ISTQB Certified Tester Foundation Level CTFL 4.0 Sample Questions (Q106-Q111):

NEW QUESTION # 106

Which ONE of the following options is NOT a benefit of test automation?

- A. More objective assessment
- **B. Eliminating completely the need for manual testing**
- C. Reduced test execution times
- D. Prevention of simple human errors

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation: Test automation improves efficiency and accuracy, but it does NOT eliminate manual testing (D).

* (A) is correct because automation speeds up execution.

* (B) is correct as automated tests produce consistent and unbiased results.

* (C) is correct because automation reduces human errors in repetitive tests.

However, manual testing remains essential for exploratory testing, usability testing, and complex test scenarios.

NEW QUESTION # 107

Consider the following examples of risks identified in different software development projects:

[I]. The contrast color ratio for both normal text and large text of a website does not comply with the applicable accessibility guidelines, making it difficult for many users to read the content on the pages

[II]. A development vendor fails to deliver their software system on time, causing significant delays to system integration testing activities that have been planned as part of a development project for a system of systems

[III]. People in the test team do not have sufficient skills to automate tests at the test levels required by the test automation strategy which does not allow production of an effective regression test suite

[IV]. In a web application, data from untrusted sources is not subject to proper input validation, making the application vulnerable to several security attacks Which of the following statements is true?

- **A. [I] and [IV] are product risks. [II] and [III] are project risks**
- B. [I] and [III] are product risks; [II] and [IV] are project risks
- C. [IV] is a product risk; [I], [II] and [III] are project risks
- D. [II], [III] and [IV] are product risks; [I] is a project risk

Answer: A

Explanation:

This answer is correct because product risks are risks that affect the quality of the software product, such as defects, failures, or non-compliance with requirements or standards. Project risks are risks that affect the project's schedule, budget, resources, or scope, such as delays, cost overruns, skill gaps, or scope changes. In this case, [I] and [IV] are product risks, as they relate to the accessibility and security of the software product, which are quality attributes. [II] and [III] are project risks, as they relate to the delivery time and the test automation skills of the test team, which are project factors. NEW QUESTION # 108

Which one of the following is a typical entry criteria for testing?

- A. The number of unresolved defects is within an agreed limit.
- **B. Availability of testable requirements.**
- C. The number of estimated remaining defects is sufficiently low.

- D. Planned tests have been executed.

Answer: B

Explanation:

A typical entry criterion for testing is the availability of testable requirements. Testable requirements provide a basis for designing and executing test cases. Without clear and testable requirements, it is challenging to determine what needs to be tested and to create effective test cases. Entry criteria ensure that the necessary preconditions are met before testing begins, which helps in conducting efficient and effective testing.

NEW QUESTION # 109

A company wants to reward each of its salespeople with an annual bonus that represents the sum of all the bonuses accumulated for every single sale made by that salesperson. The bonus for a single sale can take on the following four values: 3%, 5%, 7% and 10% (the percentage refers to the amount of the single sale).

These values are determined on the basis of the type of customer (classified as "Basic" or "Premium") to which such sale was made, and on the amount of such sale classified into the following three groups G1, G2 and G3:

* [G1]: less than 300 euros

* [G2]: between 300 and 2000 euros

* [G3]: greater than 2000 euros

Which of the following is the minimum number of test cases needed to cover the full decision table associated with this scenario?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

The minimum number of test cases needed to cover the full decision table associated with this scenario is 6.

This is because the decision table has 4 conditions (type of customer and amount of sale) and 4 actions (bonus percentage). The conditions have 2 possible values each (Basic or Premium, and G1, G2 or G3), so the total number of combinations is $2 \times 2 \times 2 \times 2 = 16$. However, not all combinations are valid, as some of them are contradictory or impossible. For example, a sale cannot be both less than 300 euros and greater than 2000 euros at the same time. Therefore, we need to eliminate the invalid combinations and keep only the valid ones. The valid combinations are:

Type of customer

Amount of sale

Bonus percentage

Basic

G1

3%

Basic

G2

5%

Basic

G3

7%

Premium

G1

5%

Premium

G2

7%

Premium

G3

10%

These 6 combinations cover all the possible values of the conditions and actions, and they are the minimum number of test cases needed to cover the full decision table.

NEW QUESTION # 110

Consider the following list of activities (I to V):

- I. Test design
- II. Test planning
- III. Review test basis
- IV. Be a facilitator of a peer review
- V. Test monitoring and control

Which ONE of the following options identifies the activities that the test management role is MAINLY focused on?

- A. Activities III, IV, and V
- **B. Activities II and V**
- C. Activities I, III, and IV
- D. Activities I and V

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation: Test management focuses on planning and control activities. Test planning (II) involves defining test strategies, schedules, and resources, while test monitoring and control (V) ensures that testing activities are aligned with objectives and tracked effectively. Other activities, such as test design (I) and peer review facilitation (IV), are typically handled by testers or test leads.

NEW QUESTION # 111

.....

You can download a small part of PDF demo, which is in a form of questions and answers relevant to your coming CTFL4 exam; and then you may have a decision about whether you are content with it. In fact, there are no absolutely right CTFL4 exam questions for you; there is just a suitable learning tool for your practices. Therefore, for your convenience and your future using experience, we sincerely suggest you to have a download to before payment. Moreover, CTFL4 Exam Questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. That helping you pass the CTFL4 exam successfully has been given priority to our agenda.
