In order to meet the needs of all customers, our company employed a lot of leading experts and professors in the field. These experts and professors have designed our Integration-Architect exam questions with a high quality for our customers. We can promise that our Integration-Architect training guide will be suitable for all people, including students and workers and so on. You can use our Integration-Architect study materials whichever level you are in right now. And we can promise you will get success by our products.

Salesforce Integration-Architect (Salesforce Certified Integration Architect) Certification Exam is an advanced-level certification program designed for professionals who specialize in integrating Salesforce with other enterprise systems. Salesforce Certified Integration Architect certification exam validates the skills and knowledge required to design and implement complex, secure, and scalable integrations between Salesforce and other systems, such as ERPs, CRMs, and custom applications. Salesforce Certified Integration Architect certification is ideal for professionals who work as integration architects, developers, or technical architects and have a deep understanding of Salesforce's integration capabilities.

Real Integration-Architect Exam Dumps, Integration-Architect Exam prep, Valid Integration-Architect Braindumps

Our exam prep material is famous among Integration-Architect exam candidates which help to polish the knowledge required to pass the Salesforce Integration-Architect exam. The certification is organized by Integration-Architect internationally. Our Salesforce Integration-Architect exam questions are the most cost-effective as we understand that you need low-cost material but are authentic and updated. Pass4Leader provides its Salesforce Integration-Architect Exam Questions in three forms, one is PDF eBook, the second is practice exam software for Windows-based systems, and the third is an online practice test.

Salesforce Certified Integration Architect Sample Questions (Q47-Q52):

NEW QUESTION # 47

A company is planning on sending orders from Salesforce to a fulfillment system. The integration architect has been asked to plan for the integration.

Which two questions should the integration architect consider?

Choose 2 answers

- A. Is the product catalog data identical at all times in both systems?
- B. Can the fulfillment system create new addresses within the Order Create service?
- C. Can the fulfillment system make a callback into Salesforce?

- **D. Can the fulfillment system implement a contract-first Outbound Messaging interface?**

Answer: C,D

Explanation:

<https://www.youtube.com/watch?v=zQncznMLrt4> Contract first interface is important as it can impact integration design in terms of efficiency and collaboration.

NEW QUESTION # 48

Northern Trail Outfitters uses a custom Java application to display code coverage and test results for all of their enterprise applications and is planning to include Salesforce as well.

Which Salesforce API should an Integration Architect use to meet the requirement?

- A. Metadata API
- B. Analytics REST API
- C. SOAP API
- **D. Tooling API**

Answer: D

Explanation:

https://developer.salesforce.com/docs/atlas.en-us.api_tooling/meta/api_tooling/tooling_api_objects_apexcodecoverage.htm

NEW QUESTION # 49

Northern Trail Outfitters is planning to perform nightly batch loads into Salesforce from an external system with a custom Java application using the and the CIO is curious about monitoring recommendations for the jobs from the Technical Architect Which two recommendations will help meet the requirements?

Choose 2 answers

- **A. Visually monitor in the Salesforce UI using the "Bulk Data Load Jobs in Salesforce in the setup menu.**
- B. Set the Salesforce debug logs level to "finest" and add the user Id running the job to monitor in the "Debug Logs" in the setup menu.
- **C. Use the getBatchInfo method in the Java application to monitor the status of the jobs from the Java application.**
- D. Write the error response from the Bulk API status to a custom error logging object in Salesforce using an Apex trigger and create reports on the object.

Answer: A,C

Explanation:

Visually monitor in the Salesforce UI using the "Bulk Data Load Jobs" in Salesforce in the setup menu, and use the getBatchInfo method in the Java application to monitor the status of the jobs from the Java application. These two methods can help the Technical Architect to monitor the nightly batch loads into Salesforce from an external system with a custom Java application using the Bulk API. The "Bulk Data Load Jobs" page in Salesforce shows the status, progress, and results of each batch load job. The getBatchInfo method in the Java application returns a BatchInfo object that contains information about a batch, such as its ID, state, number of records processed, and number of errors. NEW QUESTION # 50

Sales representatives at Universal Containers (UC) use Salesforce Sales Cloud as their primary CRM. UC owns a legacy homegrown application that stores a copy of customer data as well. Sales representatives may edit or update Contact records in Salesforce if there is a change.

Both Salesforce and the homegrown application should be kept synchronized for consistency. UC has these requirements:

1. When a Contact record in Salesforce is updated, the external homegrown application should be
2. The synchronization should be event driven.
3. The integration should be asynchronous.

Which option should an architect recommend to satisfy the requirements?

- A. Leverage Platform Events to publish a custom event message containing changes to the Contact object.

- B. Leverage Change Data Capture to track changes to the Contact object and write a CometD subscriber on the homegrown application.
- C. Write an Apex Trigger with the @future annotation. D Use an ETL tool to keep Salesforce and the homegrown application in sync on a regular candence.

Answer: B

Explanation:

Leverage Change Data Capture to track changes to the Contact object and write a CometD subscriber on the homegrown application. This solution meets the requirements of keeping Salesforce and the homegrown application synchronized for consistency, using event-driven and asynchronous integration. Change Data Capture is a feature that allows you to receive near real-time notifications of changes to Salesforce records, such as inserts, updates, deletes, and undeletes. You can use Change Data Capture to track changes to the Contact object, and publish them as events to an event bus. CometD is a protocol that allows you to subscribe to events from the event bus using a streaming API. You can write a CometD subscriber on the homegrown application, and use it to receive the events and update the customer data accordingly.

NEW QUESTION # 51

An integration architect has been tasked with integrating Salesforce with an on-premises system. Due to some established policies, this system must remain on-premises.

What should the integration architect use to build a solution for this requirement?

- A. Use Salesforce Connect if the database supports Open Database Connectivity (ODBC).
- B. Use Salesforce Connect If the database supports Open Data Protocol (OData).
- C. Use Heroku Connect if the data is hosted in Heroku.

Answer: B

Explanation:

Use Salesforce Connect if the database supports Open Data Protocol (OData). Salesforce Connect allows you to integrate external data sources with Salesforce without copying the data into Salesforce. OData is a standard protocol for accessing data from different sources. Use Salesforce Connect if the database supports Open Database Connectivity (ODBC) is incorrect because ODBC is not supported by Salesforce Connect.

Use Heroku Connect if the data is hosted in Heroku is incorrect because Heroku Connect is used to synchronize data between Salesforce and a Heroku Postgres database, not an on-premises system.

NEW QUESTION # 52

.....

Applying the international recognition third party for payment for Integration-Architect exam cram, and if you choose us, your money and account safety can be guaranteed. And the third party will protect the interests of you. In addition, Integration-Architect learning materials are edited and verified by professional experts who possess the professional knowledge for the exam, and the quality can be guaranteed. We are pass guarantee and money back guarantee and if you fail to pass the exam, we will give you full refund. We provide free update for 365 days for Integration-Architect Exam Materials for you, so that you can know the latest information for the exam, and the update version will be sent to your email automatically.
