The Certified Information Security Manager price is benefit. reliable CISM test camp materials make you success in your career.

ISACA Certified Information Security Manager Sample Questions (Q150-Q155):

NEW QUESTION # 150

Company A, a cloud service provider, is in the process of acquiring Company B to gain new benefits by incorporating their technologies within its cloud services.

Which of the following should be the PRIMARY focus of Company A's information security manager?

- A. The cost to align to Company A's security policies
- B. The organizational structure of Company B
- **C. Company A's security architecture**
- D. Company B's security policies

Answer: C

Explanation:

Explanation

According to the CISM Review Manual, the security architecture of an organization defines the security principles, standards, guidelines and procedures that support the information security strategy and align with the business objectives. When acquiring another company, the information security manager of the acquiring company should focus on ensuring that the security architecture of the acquired company is compatible with its own, or that any gaps or conflicts are identified and resolved.

References = CISM Review Manual, 27th Edition, Chapter 2, Section 2.1.2, page 751.

NEW QUESTION # 151

Which of the following will BEST prevent external security attacks?

- A. Securing and analyzing system access logs
- **B. Network address translation**
- C. Background checks for temporary employees
- D. Static IP addressing

Answer: B

Explanation:

Explanation

Network address translation is helpful by having internal addresses that are nonroutable. Background checks of temporary employees are more likely to prevent an attack launched from within the enterprise. Static IP addressing does little to prevent an attack. Writing all computer logs to removable media does not help in preventing an attack.

NEW QUESTION # 152

Which of the following would MOST effectively ensure that information security is implemented in a new system?

- A. Security scanning
- B. Security baselines
- **C. Penetration testing**
- D. Secure code reviews

Answer: C

NEW QUESTION # 153

An information security manager is reporting on open items from the risk register to senior management. Which of the following is MOST important to communicate with regard to these risks?

- A. Compensating controls
- B. Responsible entities
- C. Potential business impact
- D. Key risk indicators (KRIS)

Answer: C

Explanation:

Explanation

The most important information to communicate with regard to the open items from the risk register to senior management is the potential business impact of these risks. The potential business impact is the estimated consequence or loss that the organization may suffer if the risk materializes or occurs. The potential business impact can be expressed in quantitative or qualitative terms, such as financial, operational, reputational, legal, or strategic impact. Communicating the potential business impact of the open items from the risk register helps senior management to understand the severity and urgency of these risks, and to prioritize the risk response actions and resources accordingly. Communicating the potential business impact also helps senior management to align the risk management objectives and activities with the business objectives and strategies, and to ensure that the risk appetite and tolerance of the organization are respected and maintained.

References = CISM Review Manual, 16th Edition, Chapter 2: Information Risk Management, Section: Risk Assessment, page 831; CISM Review Manual, 16th Edition, Chapter 2: Information Risk Management, Section: Risk Reporting, page 1012.

NEW QUESTION # 154

On which of the following should a firewall be placed?

- A. Domain boundary
- B. Screened subnet
- C. Web server
- D. Intrusion detection system (IDS) server

Answer: A

Explanation:

Explanation

A firewall should be placed on a (security) domain boundary. Placing it on a web server or screened subnet, which is a demilitarized zone (DMZ), does not provide any protection. Since firewalls should be installed on hardened servers with minimal services enabled, it is inappropriate to have the firewall and the intrusion detection system (IDS) on the same physical device.

NEW QUESTION # 155

.....

With the intense competition in labor market, it has become a trend that a lot of people, including many students, workers and so on, are trying their best to get a CISM certification in a short time. They all long to own the useful certification that they can have an opportunity to change their present state, including get a better job, have a higher salary, and get a higher station in life and so on, but they also understand that it is not easy for them to get a CISM Certification in a short time.
